Power quality

Power quality problems are one of the major causes of unscheduled downtime and equipment malfunction and damage. Reliability and consistency of electricity supply are critical to businesses, from industrial plants, to medical facilities, data centers, and office buildings. When power quality is imperfect due to disturbances such as interruptions, voltage dips, or harmonic pollution, your business suffers.

Power quality is a crucial issue because of the frequency of occurrence and financial impact of issues: 30 – 40 percent of all unscheduled downtime today is related to power quality problems. In the industry sector alone, the cost of poor power quality can reach 4 percent of annual turnover and is often equivalent to the total balance payable on a facility's energy bill.

A capital investment in power factor correction and harmonic filtering equipment can result in a healthy return of investment. AccuSine™ PCS+/PFV+ active filters provide a simple and effective way to mitigate harmonics and reduce process-related voltage fluctuations. Improve electrical network reliability and system capacity while reducing operating costs with one simple solution.

Today, electrical installations are exposed to a great deal of power quality problems; 80 percent of these disturbances are generated by typically installed equipment. In industrial facilities, for example, such disturbances can be caused by nonlinear loads like arc welders or variable speed drives, capacitor switching, or large motor starts. In commercial buildings, electronic equipment like computers, UPS, and servers may also generate additional power quality disturbances.

The other 20 percent of power quality disturbances come from the energy provider: even the most advanced transmission and distribution systems are not able to guarantee 100 percent energy availability. Even with 99.99 percent energy availability, the equivalent interruption time amounts to 52 minutes every year.

Many people believe optimizing facility operations and achieving ideal power factor is complex and costly.

However, Schneider Electric™ helps make realizing superior power system efficiency simple, safe, and economical.

AccuSine+ Products solve a wide range of power quality problems.

A complete solution, when, where, and how you want it

Schneider Electric power quality solutions include everything needed to ensure your power system is operating at its best. Our expertise ranges from power system monitoring and problem diagnosis, to engineering, installing, and supporting the precise power quality solution your facility needs to run at optimal efficiency and cost.

The quality and performance you expect

All our power quality solutions provide an excellent return on investment because they are designed and manufactured by Schneider Electric, using advanced manufacturing methods and premium materials. They are optimized to match your application needs and are engineered to provide superior performance.

AccuSine PFV+ is a very simple and effective means to eliminate leading or lagging power factor, reduce voltage fluctuations, enhance equipment operating life, and improve system power capacity. AccuSine PFV+ offers many features in one package that others require multiple models to accomplish. Power factor correction with AccuSine PFV+ is worry-free and without the risk of resonance.

AccuSine PCS+ is a flexible, high performance, cost-effective solution to stabilize electrical networks by providing harmonic mitigation, power factor correction, and load balancing.

Both AccuSine PCS+ and AccuSine PFV+ can help you reduce CapEx expenditures and OpEx expenses. They help you to improve:

- Harmonics
- Power factor
- Imbalance (specifically important for motor applications)
- Voltage stability (such as localized photovoltaic networks)
- Flicker

AccuSine PCS+ and AccuSine PFV+ help reduce CO₂ emissions to help minimize climate change as well.

The Schneider Electric solution for active harmonic filtering in industrial installations.

AccuSine PCS+ Specifications	
Technical Specifications	
Standard RMS output current ratings	60 A, 120 A, 200 A, 300 A — 380 – 480 Vac 47 A, 94 A, 157 A, 235 A — 480 – 600 Vac 40 A, 80 A, 133 A, 200 A — 600 – 690 Vac
Electrical System Characteristics	
Nominal voltage	380 – 480 Vac; +10%/-15% 480 – 600 Vac; +10%/-15% 600 – 690 Vac; +10%/-15%
Nominal frequency	50/60 Hz, ± 3 Hz auto sensing
Number of phases	3-phase, with or without neutral
Operation with single phase loads	Yes; no effect on neutral current
Technical Product Characteristics	
Power electronics	IGBT; 3 level inverter
Topology	Digital harmonic FFT Digital reactive power
Losses	At 480 Vac < 3%; at 690 Vac < 5%
Current transformers (CT)	Any ratio with 1 or 5 ampere secondary Type 1 accuracy 50/60 or 400 Hz rated Grounded
Quantity of CT	2 or 3 for 3-wire electrical system 3 required for 4-wire electrical system
CT VA loading	15 m Ω
Spectrum cancellation	2nd to 51st, discrete; fully selectable per harmonic order (amplitude and on/off)
Control basis	Closed loop for new installations ¹ Open loop compatible for retrofit applications
CT position	Closed Loop Control: Source sense (at mains) CT or Load sense CT for single unit ² Open Loop Control: Load sense CT or source sense CT for single unit ³
Harmonic attenuation	Closed Loop: < 3% THD(i); max 20:1 THD(i) reduction with load harmonic current above 50% of AccuSine PCS+ rating Open Loop: < 5% TDD Requires 3% or higher inductive impedance per nonlinear load
Harmonic operational features	% THDi set point % THDv set point
Harmonic avoidance	Output at specific harmonic order turned off if resonance or lack of impedance detected; or manually turned off
Parallel operation	Up to 10 units per set of CT (to 51st order), any size combination Backward compatibility with AccuSine PCS operated in parallel. Contact your SE sales office for applications of more than 10 units
Parallel operation options	Master/Master (masters receive mains CT) Master/Slave Multimaster/multislave Same as AccuSine PCS for retrofits
Parallel sequence options	Lead/lag with unit rotation: one unit operates to full capacity before next unit turns on; timed rotation. Load Share: All operating units function at the same output percentage.
Parallel redundancy	Any unit with CT connections will automatically become master if the controlling master is taken offline. Automatic increase in output of all units to make up capacity of any offline unit.
Parallel HMI control	Any unit permits viewing and changing parameter settings of complete system or any other unit in parallel system
Parallel communications	Proprietary COM Bus between operating units
Power factor correction	Optimized unity PF, Leading (capacitive) or lagging (inductive) power factor (Cos ϕ) to target
Mains current balancing	Negative sequence current injected to balance fundamental current on the mains due to load imbalance (inherently corrects displacement PF (Cos ϕ))
Control response time	25 μ s
Harmonic correction time	2 cycles
Reactive correction time	1/4 cycle
Display	5.7 in./144 mm QVGA TFT 64k-color touch screen
Languages	English
Operator interface	Magelis™ HMI STU touch panel screen
Display parameters	100's: includes THDi, THDv, oscilloscope for viewing many selected parameters, phasor diagrams, load power, measured currents for Ih, Is, If, I neg seq, PF (Cos ϕ), injected currents for Ih, I reactive, I neg seq, etc.

¹ Default and preferred control method.
² Auxiliary CT required for paralleling of units with Load sense CT position.
³ Auxiliary CT required for paralleling of units with Source (mains) sense CT position.

AccuSine PCS+ Specifications

Communications capability	Modbus RTU, Modbus TCP/IP
Discrete input/outputs	4 input and 4 output dry contacts; assignable
Noise level (ISO3746)	<70 db at one meter from unit surface
Color	RAL7035 Enclosure; RAL7022 Plinth (floor standing units)
Earthing (grounding) systems	Supports TT, TN, and IT grounding systems; Solidly, low, and high resistance grounded; ungrounded; corner grounded delta; high leg delta EMC filter ground switch for IT, high resistance ground or corner grounded systems
Environmental Conditions	
Operating temperature	60 A, 120 A & 200 A: IP00, IP20, UL Type Open, & UL Type 1 configurations -0 °C to 45 °C All others 0 °C to 40 °C Derate 2% per degree °C to 50 °C
Relative humidity	To 95%, noncondensing
Seismic rating	Complies with IBC and ASCE7
Operating altitude	1000 m (derate 1%/100 m above), max 4800 m
Automatic rollback of output	Occurs whenever heatsink temperature sensor exceeds temperature limit
Ambient temperature shutdown	Absolute shutdown if air inlet temperature reaches 51 °C
Preset output limits (rms)	Programmable set limit due to altitude or ambient temperature — becomes fixed output limit
Storage (in original shipping container)	Temperature: -20 °C to 60 °C Relative humidity: to 95%, noncondensing Clean, dry, and protected No conductive particles permitted
Contaminant levels — operating (IEC 60721-3-3)	Chemical Class 3C2 Mechanical Class 3S2 No conductive particles permitted
Contaminant levels — transport and storage (IEC 60721-3-3)	Chemical Class 3C3 Mechanical Class 3S3 When stored in original shipping container No conductive particles permitted
Reference Standards	
Design	CE EMC Certification IEC/EN 60439-1, EN 61000-6-4 Class A, EN 61000-6-2
Protection (enclosure)	IP00, IP20, IP31, IP54, UL Type 1, UL Type 2, UL Type 12, UL Type Open
Standards compliance/certification	cULus (UL508 , CSA 22.2 No. 14) CE Certified, ABS, Lloyds, other local standards
Installation	
Wall mount	IP00, IP20, UL Type 1, & UL Type Open
Free standing	IP31, IP54, UL Type 2, & UL Type 12
Circuit protection	IP00 and IP20 — external means required Free standing enclosures — Incoming circuit breaker or fused disconnect with mechanical door interlock
AIC rating	To 415 Vac — 200 kA cULus; 125 kA IEC To 480 Vac — 200 kA cULus; 75 kA IEC To 600 Vac — 100 kA cULus; 100 kA IEC To 690 Vac — no cULus rating; 100 kA IEC
Cable entry	UL Type open, IP00, UL Type 1, and IP20 — bottom only Free standing — top and bottom entry through gland plates
PCBA protection	Conformal coating on all PCBAs Pollution Degree 2
Cooling configuration	Separate air plenums for heat sink section and PCBA section. Heat sink ("high heat plenum") input from bottom and exhaust out top. All components in high heat plenum rated IP54 or better => no filtering required. PCBA air supply must be clean and dry (filtering may be required). No conductive particles permitted.
Service Provisions	
HMI (Magelis STU)	Plain language output (no cryptic codes) USB port for upload of new software and download of operational records
Service port	USB port: commission, program, or diagnostics via a laptop computer when power is on or off; laptop provides power to control board when no unit power is present
Commissioning	On-board step-by-step process; CT automatic sizing, phase rotation, and polarity; external transformer ratio and phase shift; heat test, and more

Typical applications

Oil and gas

- Oil and gas platforms
- Port cranes
- Steel

Water

Cement

- Water/wastewater HVAC
- Automotive
- Process plants. Pulp and paper

HVAC

Building

- Wind and solar farms
- Lifts (ski or building)
- Marine vessels

Wind mills

AccuSine+ Wall-mount Conversion Kit

- Converts IP00 (UL Type Open) to IP20 (UL Type 1) wall-mounted enclosed assemblies.
- Includes HMI mounting plate and cable entry enclosure for mounting on the bottom of the IP00 assemblies.

Current Transformers and Accessories Split Core Design

Specifications

Construction:

Directional silicon steel is used for the flexible core. Secondary windings are of copper. Unit is encapsulated in silicone rubber, which protects against moisture, dirt, oil, and corona.

Insulation level	0.72 KV, BIL 10 KV Full Wave	
Frequency	50 – 400 Hz	
Thermal factor	1.25 at 30 °C.. 1.0 at 55 °C	
Operating temp range	-45 °C to +55 °C	
Altitude	Up to 4000 Meters	
Accuracy	200:5 thru 300:5	4%
	400:5 thru 500:5	3%
	600:5 thru 800:5	2%
	1000:5 thru	1%
	6000:5	
Secondary leads	3.65 m with spade connectors	
Color	Transformer (red); Leads (yellow)	
Remains flexible from -45° to +200 °C

Auxiliary and Summing Transformers

Description

- The Reference "PCSPCT190X..." is an auxiliary transformer for use in the secondary of main current transformers to change the ratio.
- The Reference "PCSPCT190XSUM..." is a summing transformer for use when three or five current transformers need to be totaled.

Specifications

Frequency	50 – 400 Hz
Thermal factor	1.33 at 30 °C, 1.0 at 55 °C
Secondary terminals	Brass studs No. 8-32
Weight	Approximately 4 lb.
Insulation class	0.6 kV, 10 kV BIL Full Wave

Note: Since these units are used in the secondary of another current transformer, they do not have a voltage rating. They are given a 2500 Volt - 60 Hz Hi Pot test. They are designed to be used on circuits not to exceed 600 volts-to-ground or between windings.

Auxiliary Transformers		
Reference Number	Current Ratio	Burden Capacity (Ω)
PCSPCT190X1000	5:1	0.5
PCSPCT190X10005	1:5	0.5
PCSPCT190X5000	5:5	0.5
Summing Transformers ¹		
Reference Number	Current Ratio	Burden Capacity (Ω)
PCSPCT190XSUM3	5+5+5:5	0.3
PCSPCT190XSUM5	5+5+5+5+5:5	0.3

¹ All current transformers to be totaled must have same ratio.

Dimensions (mm)

Shorting Terminal Block and Parallel Connection Cables

Specifications

Rating	600 Vac, 30 A
Thermal rating	to 55 °C
Humidity	to 95%
Class 1E qualified per IEEE 323-1974	
This device is not CE certified	

Shorting Terminal Block

Reference Number	Description
PCSPNHA3825	CT shorting switch 6 terminals dpst

Dimensions

- Torque wire terminals to 0.565 nm.
- Torque mounting screws to 2.26 nm.

Parallel Connection Cables

- Parallel connection cables — CAT5E type.
- Required to interconnect all units operating in parallel — need one per AccuSine+ unit.

Reference	Description	Length (ft./m)
PCSPNHA38244	Paralleling cable CAT5E 3 m	9.84/3
PCSPNHA38245	Paralleling cable CAT5E 4.5 m	14.76/4.5
PCSPNHA38246	Paralleling cable CAT5E 6 m	19.78/6
PCSPNHA38247	Paralleling cable CAT5E 7.5 m	24.6/7.5

PCSPNHA38249	Paralleling cable CAT5E 12 m	39.37/12
PCSPNHA38250	Paralleling cable CAT5E 15 m	49.21/15
PCSPNHA38251	Paralleling cable CAT5E 18 m	59.06/18
PCSPNHA38252	Paralleling cable CAT5E 22 m	72.18/22
PCSPNHA38253	Paralleling cable CAT5E 30 m	98.43/30

Human-machine Interface (HMI)

AccuSine+ products include a full color HMI with a Graphical User Interface.

Direct control, programming, and monitoring are possible without a PC or the Internet.

Measurements

A complete set of measurement data is accessible:

- line-to-line r.m.s. voltages
- total r.m.s load currents (on three phases)
- active filter output r.m.s currents (on three phases)
- harmonic r.m.s load and line currents
- voltage and current distortions (THDu and THDi)
- reactive r.m.s load current
- active filter reactive r.m.s output current
- heatsink temperature (in deg. C)

Human-machine Interface

Touch Screen

Direct control of AccuSine+ units is possible by using the touch screen.

Display

A graphical display is used for different functions:

- access and set up of operating parameters
- measurement data
- operation status (warnings, fault messages)

Menus are accessible for easy navigation.

Configuration Parameters

List of selectable parameters:

- 3- or 4-wire configuration
- harmonics or reactive energy compensation (separately or in combination)
- current transformer ratio
- power factor target
- number of units in parallel
- communication parameters

Alarms and Fault display

Detailed alarms and fault messages are displayed for easy trouble shooting:

- supply voltage or frequency outside of normal operating range
- current limitation
- overtemperature
- controller fault
- communication fault
