8-10/2
2017

Hoe werkt en leeft u in 2030?

Comment travaillerez-vous et vivrez-vous en 2030 ?

De manier waarop we leven en werken verandert enorm. Technologie is een belangrijke katalysator van deze verandering. Schneider Electric investeert continu in innovatie om u als gebruiker klaar te maken voor een welvarende toekomst.

Onze nieuwe oplossingen en technologieën onthullen we graag tijdens Indumation 2017, dé tweejaarlijkse innovatie- en automatiseringstechnologiebeurs bij uitstek. Deze editie zal plaats vinden te Kortrijk Xpo van 8-10 Februari 2017.

Wij ontvangen u graag op onze stand voor een ware ontdekkingstocht.

Tot dan.

[Schrijf u in voor Indumation!](#)

Notre façon de vivre et de travailler change énormément et la technologie est un des catalyseurs essentiel de ce changement. Schneider Electric investit en permanence en innovation afin de vous préparer à un avenir prospère.

C'est avec plaisir que nous dévoilerons nos nouvelles solutions et technologies lors d'Indumation 2017, l'ultime exposition de l'innovation et de l'automatisation. Cette édition se tiendra à Kortrijk Xpo du 8 au 10 février 2017.

Nous nous réjouissons de vous accueillir à notre stand pour une vraie découverte.

A bientôt

Get in control with our new Harmony potentiometers

Harmony potentiometers in combination with RE22 time relays and ATV speeddrives

In our newsletter of [August](#), you were able to discover our new range of potentiometers. Now we go further by providing you the wiring diagrams to combine the potentiometers with Altivar speeddrives and RE22 time relays. With the potentiometer, you can easily set the right speed or time without having to open the control panel.

Less-wire means less work, less maintenance, less costs

Our less-wire technology makes any sensor wireless

Telemecanique Sensors is pushing the limits of innovation by introducing the new less-wire technology. This technology makes it possible to connect any sensor with a discrete output to a transmitter (powered with 24VDC). This transmitter will send the sensor signal over the air to a receiver with 4 PNP outputs. To ensure the communication, the receiver sends back an acknowledge signal to the transmitter. To learn more about it, download the catalogue ([ENG](#) / [FR](#)).

New Citect SCADA 2016: available now!

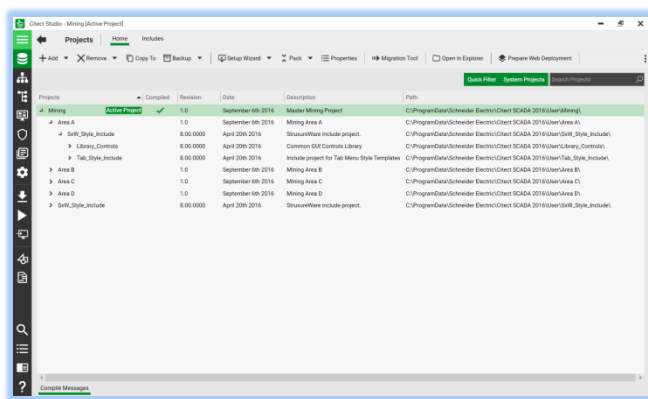

SCADA Expert
Vijeo Citect

CitectSCADA

**Citect
SCADA**

The upcoming release of Citect SCADA 2016 signifies the dissolution of our StruxureWare SCADA Expert Vijeo Citect and CitectSCADA dual brand strategy, with the consolidation of both product offerings under our flagship Citect SCADA brand. This move is aimed at simplifying the customer experience, eliminating confusion in the marketplace and boosting customer perception while leveraging the strength and history of our renowned SCADA brand - Citect SCADA.

What's New?

•Citect Studio

- Our new integrated development environment
- Replaces Citect Explorer & Project Editor
- Intuitive activity-based user experience

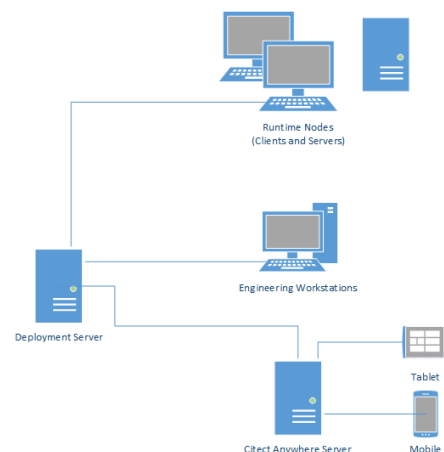

•Centralized Deployment

- Enhanced deployment management
- Security built-in (Role based security + HTTPS)
- Notification for operators

•Simplified Topology management

- Simplified Server configuration
- Graphically view your server infrastructure
- View topology by machine or by cluster

•And more...

Why going wireless? Because you can!

Batteryless & wireless limit switches OsiSense XCKW

Telemecanique Sensors has expanded its offer of wireless products with the launch of a range of limit switches based on an automatic radio wave generator system. This range includes transmitters and receivers which communicate via 2.4 GHz radio transmission. There is no need to use batteries, as the radio pulse is emitted while the actuator moves. Operation is therefore one-way towards the receiver. The OsiSense XCKW offer can be used to find the position of an item or part of a machine remotely, without a wired connection. The transmitter is equipped with a “dynamo” generator which converts the mechanical energy produced by the actuator movement to electrical energy. A radio-encoded message (2.4 GHz ZigBee protocol) is then sent, by a single pulse, to one or more receivers located several dozen metres away. There are therefore no batteries, as the system is self-powered. Download the catalogue ([ENG](#) / [FR](#)).
