Sustainable Packaging

We are committed to 100% primary and secondary packaging free from single-use plastic and using recycled cardboard.

Green Premium™

We launched the sustainable packaging initiative globally in 2021 and work to implement it across all our existing products by 2025. Meanwhile, any new products will come in sustainable packaging from the get-go.

Key changes we're making for a better, circular future

1. Using more recycled material

We're turning to 100% recycled and recyclable cardboard as we eliminate single-use plastic from our packaging.

2. Going natural

We're keeping our packaging boxes the same natural cardboard color they come in. By not adding extra color and gloss, we avoid the associated chemicals, energy usage, and pollution. And when color is needed, we will opt for more environmentally-friendly inks made from water and vegetable oil.

3. Digitizing the customer experience

To reduce waste even further, our packages will only come with a one-page safety leaflet. A QR code will direct you to additional product information such as instructions.

*Primary packaging and secondary packaging (used for transportation) of Schneider Electric
