# Purpose of the Document

## Target Audience

This document is intended to address End User Engineering, Operations and Maintenance, Consultants, EPCs (Engineering, Procurement, and Construction) and Service teams and other qualified personnel.

## Objective

To understand the challenges of designing and operating a Semiconductor Fab with an efficient and sustainable electrical distribution strategy.

# Table of Contents

## SECTION 1 – Introduction to the Semiconductor Fab Industry

## SECTION 2 – How EcoStruxure Power Can Support the Semiconductor Fab

## SECTION 3 – Digital Solutions and Services

## BIBLIOGRAPHY

### SECTION 1: Introduction to the Semiconductor Fab

Introduces the context and the challenges of  
a Semiconductor Fab.

### SECTION 2: How Schneider Electric Can Support the Semiconductor Fab Industry with EcoStruxure Power

Describes the solutions that EcoStruxure Power  
provides for Semiconductor Fabs, with typical  
electrical and digital architectures.

### SECTION 3: Digital Solutions and Services

Gives information about EcoStruxure Power capabilities for  
Semiconductor Fabs, sorted by value proposition:

- [Transverse Lifecycle Capabilities](#)
- [Capabilities to Improve Time To Market](#)
- [Capabilities to Increase Efficiency](#)
- [Capabilities to Improve Resiliency](#)
- [Capabilities to Grow Sustainability](#)

### BIBLIOGRAPHY

Contains useful documents to find out more about  
capabilities.

Provides details about Green Premium.

# Semiconductor Fab Industry Challenges

## Four pillars to drive efficiency, resiliency and sustainability KPIs

The strong growth of the semiconductor industry leads to an increase in fabrication capacity. Creating or expanding this capacity is not without its challenges. Four pillars must be addressed:

### Improve Time to Market

How can we accelerate the design & build of new semiconductor fabs?

### Increase Efficiency

How can we reduce our operational costs?

### Improve Resiliency

How can we improve power quality and minimize downtime?

### Grow Sustainability

How can we reduce our carbon footprint and integrate more renewable, sustainable energy sources?

## SECTION 2

---

# How EcoStruxure Power Can Support the Semiconductor Fab Industry

### WHY READ THIS SECTION?

The objective  
of this section is to:

- Present the **solutions to address the four pillars** to meet the Semiconductor Fab industry challenges
- Explain how **Schneider Electric EcoStruxure Power** can support this industry
- Give an **example** of electrical and digital architectures.

# Solutions to Address the Four Pillars of Semiconductor Fabs

The four pillars can be addressed by the following solutions:

## Improve Time to Market

### Use Standardized Architectures

Use standardized electrical distribution and digital tools to speed up the design, build and commissioning of new fabs.

## Increase Efficiency

### Improve Facility Performance

Turn data into business intelligence and leverage a digital twin to provide actionable insights to drive efficiency.

## Improve Resiliency

### Minimize Downtime

Help assure optimum power quality and reliability while improving safety for your staff and guarding against cyber attacks

## Grow Sustainability

### Meet Sustainability KPIs

Engage consultancy services to strategize, digitize and decarbonize.

This guide describes the solutions developed by EcoStruxure Power to address these four pillars.

### Digital Solutions & Services

#### WHY READ THIS SECTION?

This section gives information about **EcoStruxure Power capabilities** for Semiconductor Fabs aligned to the **industry challenges**.

# Introduction

## EcoStruxure Power provides capabilities to support the challenges of Semiconductor Fabs throughout their lifecycle

**Design, Build, Commission**  
(Consultants & EPC)

**Operate & Maintain**  
(Operators, maintenance team, service teams)

### Improve Time to Market

These capabilities provide standardized designs and digital architectures, and enable easy simulation, to reduce cost of design and ownership.

### Increase Efficiency

These capabilities use digitization to provide intelligent information to the workforce, allowing them to make smart decisions that reduce operating costs and increase efficiency.

### Improve Resiliency

These capabilities use digitization to reduce unplanned downtime, increase reliability, and thus reduce production waste.

### Grow Sustainability

These capabilities help track energy consumption and carbon emissions to meet sustainability requirements.

## Transverse Lifecycle Capabilities

Digital Solutions that support your project from the Design, Build, Commission to Operate & Maintain phases.

## Green Premium

## Manage sustainability from design to end of life

## Benefits

- Green Premium\* products provide detailed information on their regulatory compliance, material content, environmental impact, and circularity attributes.

## 1 Compliance and transparency

(compliance certificates, circularity profiles, environmental footprint, etc.)

2

### Circular performance

Durability, upgradeability, re-manufacture, recycled content, recyclability

3

### Well-being performance

E.g. free of PVC, mercury, silicone, SVHC, lead, toxic heavy metal and compliant with California Prop 65

4

### Resource performance

Optimized energy performance  
Lower carbon emissions

*Green Premium Value Proposition*

\* The Green Premium label was created to provide Schneider Electric's customers with more sustainable products and to be transparent with environmental information.

## Optimize bus design allocation and simulation

## Primary Department

- Design
- Construction

## Benefits

- Single solution/environment
  - Unified AC & DC solution from HV to LV
  - One unique platform and one database
- Efficient profile management
  - User-defined loading and generation profiles
  - External data profile based on field measurements
- Scalability
  - Load growth study for future planning
- Event simulations within the calculation period

ETAP Electrical Network Model

# Electrical Network Short Circuit Simulation

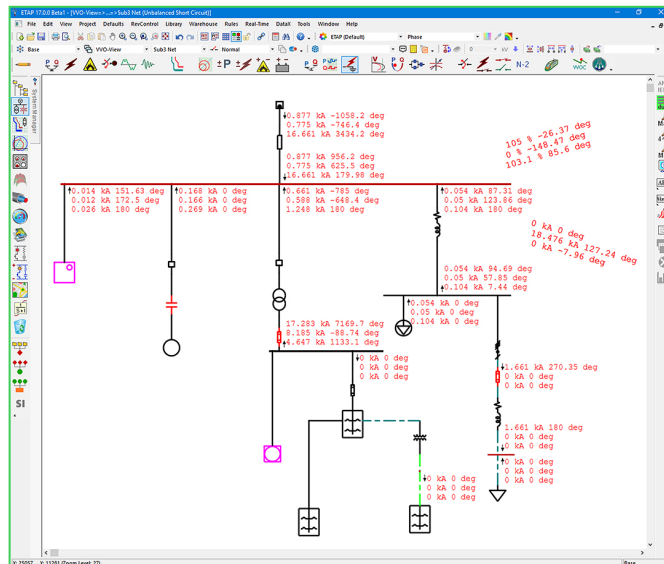

## Design and simulate unbalanced short circuits

### Primary Department

- Design
- Construction

### Benefits

- Expedite design studies with a wide range of calculation scenarios, including advanced fault analysis
  - IEC & ANSI duty calculation for balanced and unbalanced faults
  - Simultaneous fault at selected nodes
  - Inclusive 3-Phase and 1-Phase fault analysis
  - Pre-Fault system loading consideration

# Device Coordination and Selectivity

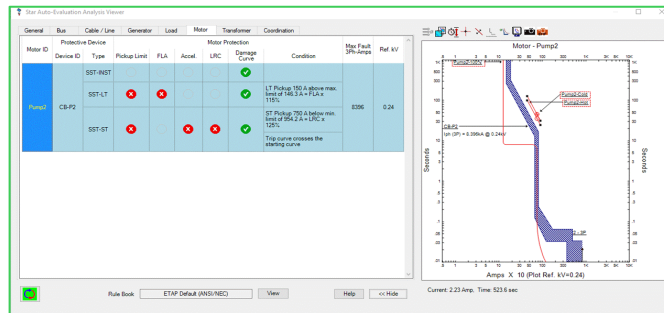

Automatically detect and evaluate the system protection and coordination/selectivity

## Primary Department

- Design
- Construction

## Benefits

- Verified and validated libraries
- Graphically adjustable device settings
- Detailed device settings reporting
- Continuous synchronization with one-line and integrated equipment database

Device Coordination and Selectivity in ETAP

# Arc Fault Protection and Coordination

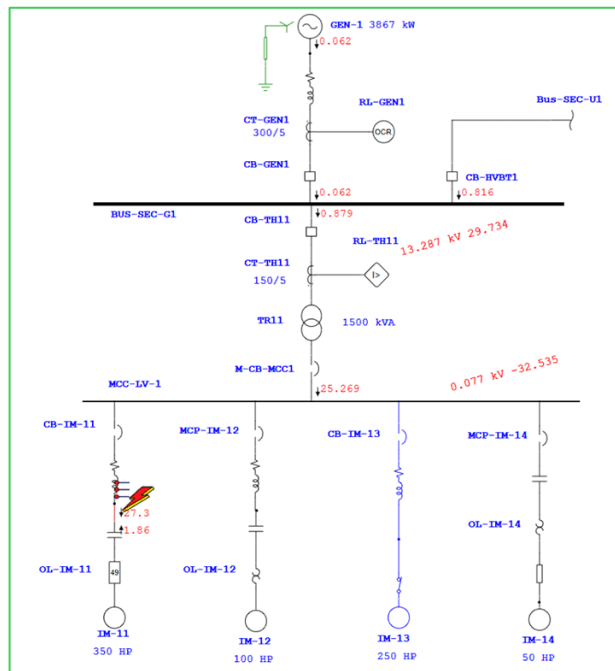

## Perform sequence of operation for arc fault and bolted fault

### Primary Department

- Design
- Construction

### Benefits

- Evaluate, verify, and confirm the operation and selectivity of the protective devices for various types of faults for any location directly from the single-line diagram
- Animation displayed on the single-line diagram
- 3-phase / 1-phase sequence of operation

Arc Fault Protection and Coordination in ETAP

# Power Quality Simulation and Modeling

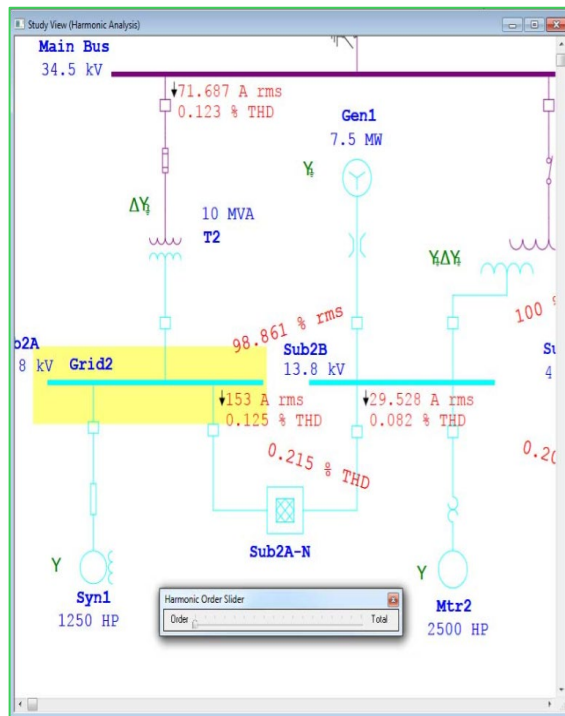

## Evaluate and validate distortion due to harmonics

### Primary Department

- Design
- Construction

### Benefits

- Simulate harmonic current and voltage sources:
  - To identify potential harmonic problems (report of harmonic voltage and current distortion limit violations)
  - To identify the need for a harmonics filter
- Simulate and analyze the size of the harmonics filter your system will need to optimize performance and reduce nuisance trips

Power Quality Simulation and Modeling in ETAP

# Renewable and Microgrid Energy Storage Sizing Simulation

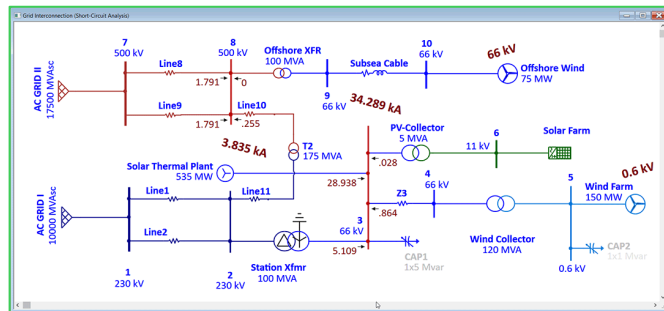

## Design and optimize the microgrid system

### Primary Department

- Design
- Construction

### Benefits

- Build renewable energy models combined with full spectrum power system analysis calculations for:
  - Accurate simulation
  - Predictive analysis
  - Equipment sizing
  - Field verification of wind, solar farms and other DERs
- Enable designers and engineers to conceptualize the collector systems, determine wind penetration and perform grid interconnection studies

Microgrid Energy Storage Sizing Simulation in ETAP

# Operator Training Simulation

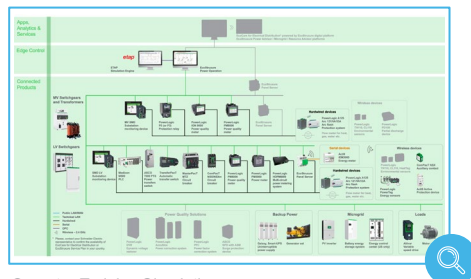

## Train new employees and build confidence on new systems

### Primary Department

- Facility Operations & Maintenance

### Benefits

- Practice operation within a simulated but highly realistic environment to enhance safety and operational efficiency
- Track and review trainee actions to analyze and challenge them

Operator Training Simulation  
Reference Architecture

#### Learn more about:

- Operator Training Simulation ( [IEC](#) / [NEMA](#) )

### 3 Training of Operators

Trainees can test actions and procedures, using backups of the EcoStruxure Power Operation production system with actual graphics.

### 2 Simulation of the Installation

ETAP Simulation Engine:

- Optionally collects real-time data of the electrical installation from EcoStruxure Power Operation
- Simulates the actions taken by trainees and provides results

### 1 Data Acquisition (from field devices)

# Predictive Simulation

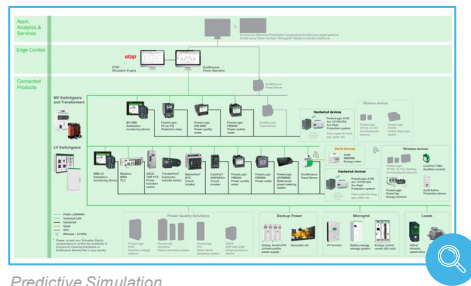

## Help employees make better decisions

### Primary Department

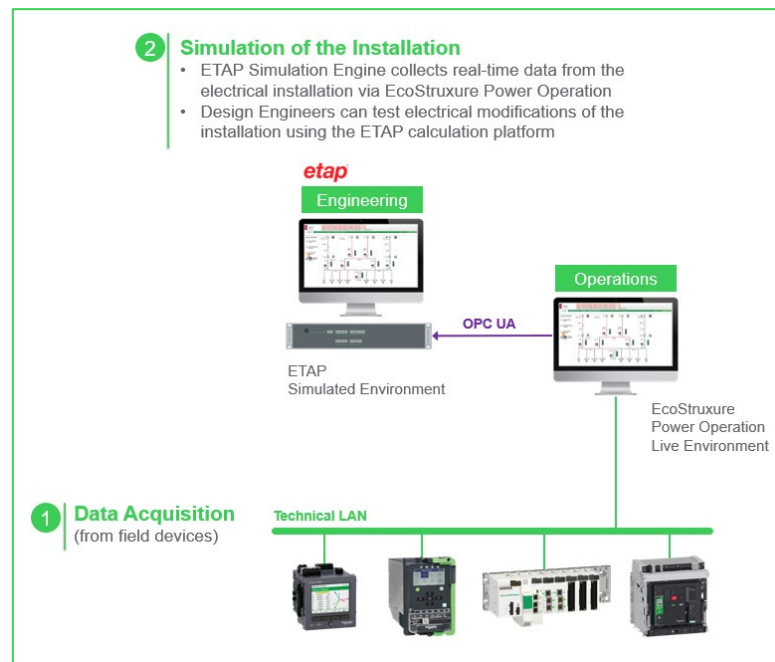

- Facility Engineering
- Design Engineering

### Benefits

- Reduce safety risks by practicing emergencies and high-risk situations
- Enhance operational efficiency by running “what-if” scenarios
- Provide faster analysis response to incidents

Capabilities to Grow Sustainability

## BIBLIOGRAPHY

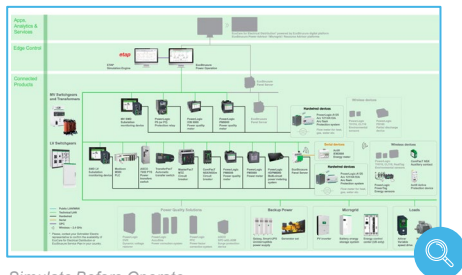

## Empower operators with predictive outcomes

## Primary Department

- Facility Operations & Maintenance

## Benefits

- Provide operators with a list of potential side effects, prior to executing a command
- Empower employees to feel more confident when operating their facilities by providing real time guidance
- Reduce human error that could lead to outages or safety concerns

 Simulate Before Operate  
Reference Architecture

## Learn more about:

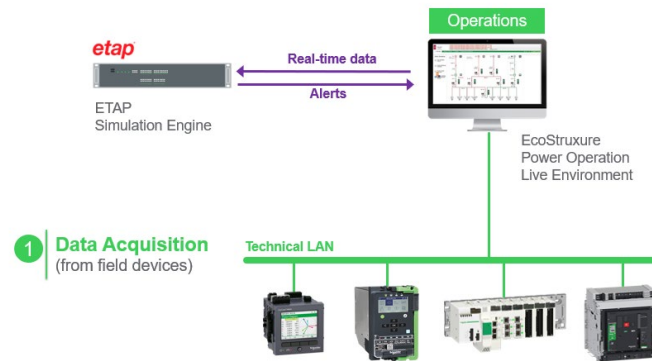

- Simulate Before Operate ([IEC](#) / [NEMA](#))

2 Simulation of  
the Operator's Actions

- Operator triggers in EcoStruxure Power Operation the action to be simulated prior to execution
- ETAP Simulation Engine simulates action using live data from EcoStruxure Power Operation

3 Delivery of  
Simulation Results

- Operator receives in EcoStruxure Power Operation real time simulated results of proposed actions
- Based on the results, operator decides to execute action or not

# Asset Performance

## Benefit from a strategic maintenance approach

### Primary Department

- Facility Operations & Maintenance

### Benefits

- Move from reactive or preventive to condition-based (predictive) maintenance strategies for critical assets like circuit breakers, gensets, transformers, etc.
- Provide event details and notification to the operator if a protection setting has been changed
- Receive notifications and diagnostics reports from expert service engineers with recommendations to optimize maintenance by asset or site

Asset Performance  
Reference Architecture

# Capabilities to Grow Sustainability

## Design, Build, Commission

(Consultants & EPC)

## Operate & Maintain

(Operators, maintenance team, service teams)

### Improve Time to Market

- AC&DC electrical network bus design and simulation
- Electrical network short circuit simulation
- Network load flow and voltage drop simulation
- Device coordination and selectivity
- Arc fault protection and coordination
- Power quality simulation and modeling
- Renewable & microgrid energy storage sizing simulation
- Power system study

### Increase Efficiency

- Operator training simulation
- Energy monitoring and usage analysis
- Energy performance, modeling and verification
- Capacity management

### Improve Resiliency

- Predictive simulation
- Simulate before Operate
- Electrical distribution monitoring and alarming
- Power event analysis
- Asset performance
- Power quality monitoring and compliance
- Power quality and power factor correction
- Thermal and partial discharge monitoring
- Arc flash protection

### Grow Sustainability

- + Carbon neutrality consulting services
- + Energy efficiency compliance
- + Greenhouse gas reporting

## Design Guide

## Digital Applications for Large Buildings and Critical Facilities

The Digital Applications Design Guide provides comprehensive details on the building blocks of EcoStruxure Power: the IoT applications are driven by a software layer to control the traditional electrical distribution infrastructure.

Developed to help engineering consultants and designers, this guide is an invaluable resource for specifying, designing and prescribing EcoStruxure Power architectures capable of performing one or more of the business-driven applications described within.
