Introduction

At the core of an EcoStruxure BMS is a SmartX server, such as the SmartX AS-B server. The SmartX AS-B server performs key functionality, such as control logic, trend logging, and alarm supervision, provides built-in I/O, and supports communication and connectivity to the field buses. The distributed intelligence of the EcoStruxure BMS ensures fault tolerance in the system and provides a fully featured user interface through WorkStation and WebStation.

Feature

The SmartX AS-B server is a powerful device with built-in power supply and I/O. The SmartX AS-B server can act as a standalone server using its built-in I/O and also monitor and manage field bus devices. In a small installation, the embedded SmartX AS-B server acts as a standalone server, mounted in a small footprint. In medium and large installations, functionality is distributed over multiple SmartX servers that communicate over TCP/IP.

Communications hub

Capable of coordinating traffic from above and below its location, the SmartX AS-B server can deliver data directly to you or to other servers throughout the site. The SmartX AS-B server can run multiple control programs, manage built-in I/O, alarms, and users, handle scheduling and logging, and communicate using a variety of protocols. Because of this, most parts of the system function autonomously and continue to run as a whole even if communication fails or individual EcoStruxure BMS servers or devices go offline.

Models

The SmartX AS-B server comes in eight models with different I/O point count and I/O mix.

SmartX AS-B servers with “H” in the product name are equipped with a display for output override.

SmartX AS-B servers with “L” in the product name do not support Modbus, BACnet MS/TP, or hosting of BACnet/IP devices. The RS-485 port is not used.

SmartX AS-B servers with 36 I/O points have the same small footprint as SmartX AS-B servers with 24 I/O points.

Versatile and flexible mix of I/O points

The SmartX AS-B server offers a mix of I/O point types that match a wide variety of HVAC applications. Most of the I/O points are universal inputs/outputs, which are highly flexible and can be configured as either inputs or outputs.
SmartX AS-B Server

SmartX AS-B servers with 24 I/O points have the following types:

- 12 Universal inputs/outputs, Ua type
- 4 Universal inputs/outputs, Ub type
- 4 Digital inputs
- 4 Relay outputs

SmartX AS-B servers with 36 I/O points have the following types:

- 20 Universal inputs/outputs, Ua type
- 8 Universal inputs/outputs, Ub type
- 4 Triac outputs
- 4 Relay outputs

Universal inputs/outputs

The universal inputs/outputs are ideal for any mix of temperature, pressure, flow, status points, and similar point types in a building control system.

The universal inputs/outputs can be configured to read several different types of inputs:

- Digital
- Counter
- Supervised
- Voltage
- Current (Ub only)
- Temperature
- Resistive
- 2-Wire RTD temperature
- 2-Wire RTD resistive

As counter inputs, the universal inputs/outputs are commonly used in energy metering applications. As RTD inputs, they are ideal for temperature points in a building control system. As supervised inputs, they are used for security applications where it is critical to know whether or not a wire has been cut or shorted. These events provide a separate indication of alarms and trouble conditions to the system.

For all analog inputs, maximum and minimum levels can be defined to automatically detect over-range and under-range values.

The universal inputs/outputs are capable of supporting analog outputs of type voltage outputs. Therefore, the universal inputs/outputs support a wide range of devices, such as actuators.

Digital inputs

The digital inputs can be used for cost effective sensing of multiple dry contact digital inputs in applications, such as equipment status monitoring or alarm point monitoring. As counter inputs, digital inputs are commonly used in energy metering applications.

Relay outputs

The relay outputs support digital Form A point types. The Form A relays are designed for direct load applications.

Triac outputs

The triac outputs can be used in many applications to switch 24 VAC on or off for external loads such as actuators, relays, or indicators. Triacs are silent and do not suffer from relay contact wear.

Manual override function

SmartX AS-B servers with "H" in the product name are equipped with an LCD display and keys to support manual override control of analog and digital outputs. This function allows you to manually override the outputs for testing, commissioning, and maintenance of equipment.

The override status is readable through EcoStruxure Building Operation WorkStation and WebStation, enabling precise monitoring and reliable control.

Built-in power supply

The device has a built-in power supply designed to accommodate 24 VAC or 24 VDC input power. The main AC/DC input (L/+ and N/-) is galvanically isolated from the electronics. This removes the risk of damage due to earth currents and permits the input power to be wired without concern for polarity matching.

Variety of connectivity options

A SmartX AS-B server has numerous ports that enable it to communicate with a wide range of protocols, devices, and servers.

A SmartX AS-B server has the following ports:

- Two 10/100 Ethernet ports
- One RS-485 port
SmartX AS-B Server

SmartX Server

- One USB host port
- One USB device port

The first Ethernet port is dedicated to the site network. The second Ethernet port is fully configurable. The second port can be configured to extend the site network so that various devices and clients can be connected. Another option is to configure the second port as a separate network, which means that the port can host a private network or act as a client to a second site network. If the second port is not used, it can be disabled.

The USB device port allows you to upgrade and interact with the SmartX AS-B server using Device Administrator. The USB host port can be used to provide power and communications for the AD touchscreen display.

Authentication and permissions

An EcoStruxure BMS provides a powerful permission system that is easy to manage, flexible, and adapts to all kinds of system sizes. The permission system provides a security level of the highest standards. Authentication is done against the built-in user account management system or against Windows Active Directory Domains. The built-in account management system allows an administrator to establish password policies that meet stringent cybersecurity guidelines. When Windows Active Directory is used, the administration costs are lower because users do not have to be managed in multiple directories.

WorkStation/WebStation interface

Through any client, the user experience is similar regardless of which EcoStruxure BMS server the user is logged on to. The user can log directly on to a SmartX AS-B server to engineer, commission, supervise, and monitor the SmartX AS-B server and its built-in I/O as well as its attached field bus devices. See the WorkStation and WebStation specification sheets for additional information.

Open building protocol support

One of the cornerstones of the EcoStruxure BMS is support for open standards. The SmartX AS-B server can natively communicate with two of the most popular standards for buildings: BACnet and Modbus.

Native BTL-listed BACnet support

A SmartX AS-B server communicates directly to BACnet/IP and BACnet MS/TP networks. The SmartX AS-B servers are BTL-listed as BACnet Building Controllers (B-BC), the most advanced BACnet Device Profile. This capability provides access to an extensive range of BACnet devices from Schneider Electric and other vendors. See the BTL Product Catalog for up-to-date details on BTL listed firmware revisions on BACnet International's home page. A SmartX AS-B server can also serve as a BACnet Broadcast Management Device (BBMD) to facilitate BACnet systems that span multiple IP networks.

Native Modbus support

The SmartX AS-B server natively integrates Modbus RS-485 master and slave configurations, as well as Modbus TCP client and server. This allows full access to third-party products and the range of Schneider Electric products that communicate on the Modbus protocol, such as power meters, UPS, circuit breakers, and lighting controllers.

Web Services support

The SmartX AS-B server supports the use of Web Services based on open standards, such as SOAP and REST, to consume data into the EcoStruxure BMS. Use incoming third-party data (temperature forecast, energy cost) over the Web to determine site modes, scheduling, and programming.

EcoStruxure Web Services support

EcoStruxure Web Services, Schneider Electric’s Web Services standard, is natively supported in the SmartX AS-B server. EcoStruxure Web Services offers extra features between compliant systems whether within Schneider Electric or other authorized systems. These features include system directory browsing, read/write of current values, alarm receipt and acknowledgement, and historical trend log data. EcoStruxure Web Services is secure. User name and password are required to log on to the system.

Two programming options

Unique to the industry, the SmartX AS-B server has both Script and Function Block programming options. This flexibility assures that the best programming method can be selected for the application.
**SmartX AS-B Server**

**SmartX Server**

**eMMC memory for data and backup**
The SmartX server has a 4 GB eMMC memory, which is used, for example, for the application, historical data, and backup storage. Users can also manually back up or restore the SmartX server to a storage location on a PC or network. Through the Enterprise Server, users have the ability to perform scheduled backups of associated SmartX servers to network storage for even greater levels of protection.

**IT friendly**
The SmartX AS-B server communicates using the networking standards. This makes installations easy, management simple, and transactions secure.

**TLS support**
Communication between clients and the EcoStruxure BMS servers can be encrypted using Transport Layer Security (TLS 1.2). The servers are delivered with a default self-signed certificate. Commercial Certification Authority (CA) server certificates are supported to lower the risk of malicious information technology attacks. Use of encrypted communication can be enforced for both WorkStation and WebStation access.

**Supported protocols**
- IP addressing
- TCP communications
- DHCP for easy network configuration
- DNS for simple lookup of addresses
- HTTP/HTTPS for Internet access through firewalls, which enables remote monitoring and control
- NTP (Network Time Protocol) for time synchronization throughout the system
- SMTP or SMTPS with support for SSL/TLS based authentication, enables sending email messages triggered by schedule or alarm
- SNMP enables network supervision and reception of application alarms in designated network management tools

**Simple DIN-rail installation**
Fasteners easily snap into a locked position for panel installation. The fastener has a quick-release feature for easy DIN-rail removal.

**Removable terminal blocks**
SmartX AS-B servers use pluggable terminal blocks, which are easy to install and remove from the device. The terminal blocks are ordered separately from Schneider Electric.

**Efficient terminal management**
The input and output terminals are clearly labeled. EcoStruxure Building Operation WorkStation can generate custom as-built labels for a SmartX AS-B server.

**Protection**
Protection components on the universal inputs/outputs, digital inputs, and triac outputs protect against high-voltage short-duration transient events. Universal inputs/outputs configured as current inputs (Ub only) are protected against overcurrent. Universal inputs/outputs configured as voltage outputs have current limits to protect against permanent short-circuit to ground.

**Specifications**

**AC input**
- Nominal voltage: 24 VAC
- Operating voltage range: +/-20 %
- Frequency: 50/60 Hz
- Maximum current: 0.5 A rms
- Recommended transformer rating: ≥15 VA

**DC input**
- Nominal voltage: 24 to 30 VDC
- Operating voltage range: 21 to 33 VDC
- Maximum power consumption: 10 W

## CPU

- **Frequency**: 333 MHz
- **Type**: SPEAr320S, ARM926 core
- **DDR2 SDRAM**: 256 MB
- **eMMC memory**: 4 GB
- **Memory backup**: Yes, battery-free, no maintenance

## Display

- **Display resolution**: 128 x 64 pixels
- **Display size**: 36 W x 17 H mm (1.4 W x 0.7 H in.)
- **Display type**: FSTN monochrome LCD, white color transflective backlight

## Part numbers

- **SmartX Controller – AS-B-24**: SXWASB24X10001
- **SmartX Controller – AS-B-24H**: SXWASB24H10001
- **SmartX Controller – AS-B-24L**: SXWASB24X10002
  - No support for Modbus, BACnet MS/TP, or hosting of BACnet/IP devices
  - Includes display
- **SmartX Controller – AS-B-24HL**: SXWASB24H10002
  - No support for Modbus, BACnet MS/TP, or hosting of BACnet/IP devices
  - Includes display
- **SmartX Controller – AS-B-36**: SXWASB36X10001
- **SmartX Controller – AS-B-36H**: SXWASB36H10001
  - Includes display
- **SmartX Controller – AS-B-36L**: SXWASB36X10002
  - No support for Modbus, BACnet MS/TP, or hosting of BACnet/IP devices
  - Includes display
- **SmartX Controller – AS-B-36HL**: SXWASB36H10002
  - No support for Modbus, BACnet MS/TP, or hosting of BACnet/IP devices
  - Includes display
- **AS-B connector kit (includes terminal blocks)**: SXWASBCON10001
- **AS-B installer kit**: SXWASBINS10001
Add-on options

SW-EWS-1, EcoStruxure Web Services (run-time) option
Consume only for one EcoStruxure BMS server, no maintenance

SW-EWS-2, EcoStruxure Web Services (run-time) option
Serve & Consume for one EcoStruxure BMS server, no maintenance

SW-EWS-3, EcoStruxure Web Services (run-time) option
Serve & Consume, plus Historical trend log data for one EcoStruxure BMS server, no maintenance

SW-GWS-1, Web Services (Generic Consume) option
For one EcoStruxure BMS server, no maintenance

SW-SNMP-1, Alarm notifications via SNMP option
For one EcoStruxure BMS server, no maintenance

SmartX AS-B Server

SmartX Server

- Normally Open
- Isolation contact to system ground: 3000 VAC
- Cycle life (Resistive load): At least 100,000 cycles
- Minimum pulse width: 100 ms

Triac outputs, DO
- Channels, SmartX AS-B servers with 24 I/O points: 0
- Channels, SmartX AS-B servers with 36 I/O points: 4, DO5–DO8
- Output rating: Max. 0.8 A
- Voltage: 24 VAC +/- 20%
- Commons: COM1 for DO5 and DO6
- COM2 for DO7 and DO8

The common terminals COM1 and COM2 can be connected to 24 VAC or to ground.
- Common voltage, high side output: 24 VAC
- Common voltage, low side output: 0 VAC (ground)
- Minimum pulse width: 100 ms

Terminals

The connection cable for the USB ports must not exceed 3 m (10 ft).

SmartX AS-B server model with 24 I/O points
For protection from excess current that could be produced by field wiring, follow these instructions:

- Connect RET terminal number 4 or 5 to a common chassis/signal ground rail in the control panel using a size 2.5 mm² (13 AWG) or larger wire. The wire must have a current rating greater than or equal to 16 A.

- SmartX AS-B servers with 24 I/O points have more RET terminals for connection of I/O returns, so the common chassis/signal ground rail is optional and may not be needed.

- Individual 24 VDC power sources to the field must be current limited to maximum 4 A for UL compliant installations, and maximum 6 A in other areas.

For more information on wiring, see Hardware Reference Guide.
Regulatory Notices

Federal Communications Commission
FCC Rules and Regulations CFR 47, Part 15, Class B
This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference. (2) This device must accept any interference received, including interference that may cause undesired operation.

Industry Canada
This Class B digital apparatus complies with Canadian ICES-003.
Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

Regulatory Compliance Mark (RCM) - Australian Communications and Media Authority (ACMA)
This equipment complies with the requirements of the relevant ACMA standards made under the Radiocommunications Act 1992 and the Telecommunications Act 1997. These standards are referenced in notices made under section 162 of the Radiocommunications Act and 407 of the Telecommunications Act.

CE - Compliance to European Union (EU)
2014/30/EU Electromagnetic Compatibility Directive
2014/35/EU Low Voltage Directive
2011/65/EU Restriction of Hazardous Substances (RoHS) Directive
This equipment complies with the rules, of the Official Journal of the European Union, for governing the Self Declaration of the CE Marking for the European Union as specified in the above directive(s) per the provisions of the following standards: EN 50491-1 Product Standard, EN 60730-1, EN 60730-2-11, and EN 50491-3 Safety Standards.

WEEE - Directive of the European Union (EU)
This equipment and its packaging carry the waste of electrical and electronic equipment (WEEE) label, in compliance with European Union (EU) Directive 2012/18/EU, governing the disposal and recycling of electrical and electronic equipment in the European community.

UL 916 Listed products for the United States and Canada, Open Class Energy Management Equipment. UL file E80146.
