schneider-electric.us/surge
Homes today contain an average of over $15,000 worth of unprotected equipment.

Surge strips only offer low-level suppressions, leaving them powerless to block appliance-damaging surges.

Everything Electrical Is Protected

Protecting your investments is easier and less expensive than you think. Square D™ Whole Home Surge Protection blocks the shock caused by surges at the load center, so you can rest assured your electronics are protected. Square D Surge Protective Devices have been developed based on decades of expertise and industry-leading technology, making it the trusted brand among homeowners and electrical contractors alike.

How do you decide which property-saving device is best for your home? Consider the following when working with your electrical contractor.

Know the Facts

Lightning storms get a bad rap for causing power surges, but did you know most surges actually come from inside the home? 80% of residential surges are caused by devices you use every day, including your hair dryer, your A/C unit and even garage door openers.

Every single time you turn on a high-powered device, it forms a mini-surge in your home’s electrical circuitry that reduces the life expectancy of your appliances. Over time, these mini surges can damage the circuit boards in appliances and electronics and may cause them to fail or not operate properly – which could cost you thousands of dollars.

Electronics in your home that could be at risk include:

- Heating & Air Conditioning Units
- Televisions
- Computers
- Stereo & Entertainment Systems
- Refrigerators
- Microwaves
- Electric Ranges
- Dishwashers
- Washers & Dryers
