The Panel Expert

Innovative Control Solutions

Square D introduces the DZ5 line of cable ends from Telemecanique. DZ5 cable ends provide a durable wire termination and wire marking system without crimping tools. Designed to fully enclose the stripped cable, these insulated cable ends are simple to use and provide high levels of safety and reliability. A wide range of accessories such as marker positioning tools, automatic stripping and cutting tools, boards for cards of markers and a handy carrying case for all components complete the line. DZ5 cable ends are for use with stranded wire ranging from 22 to 4 AWG.

Improves safety

The molded plastic of the DZ5 covers the metal terminal ensuring that all the conductor strands enter the terminal. By fully enclosing the stripped cable DZ5 cable ends help eliminate loose strands which can cause short circuits and hazardous situations for personnel or machinery. Simply tightening down the terminal screw securely positions the cable end on the conductor. The markable variety provide clearly visible identification of wiring even when wires are bent close to terminals.

Economical

To minimize inventory requirements, a limited range of products covers a wide variety of cable sizes. One size marker fits up to 11 standard insulated cable ends for use with stranded wire from 22 to 4 AWG. No time is wasted finding the right size markers and markers can be changed without disconnecting wiring. Up to 7 markers can be installed on each cable end. Installation time and expense are reduced by use of the available marker positioning tool which allow quick positioning of markers.

Full range of accessories

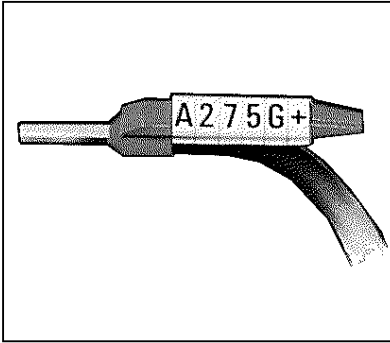

To further enhance this cable marker system a wide range of accessories are available. An extensive range of color coded letters (A to Z) and numerals (0 to 9) provide an unlimited range of markings. The marker positioning tool allows quick and easy placement of markers on cable ends. An automatic cutting and stripping tool, with adjustable stripping length, make 20 to 12 AWG wire preparation a snap and the compartmentalized carrying case keeps cables ends and accessories organized and available.

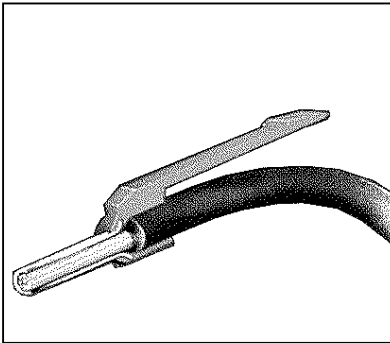

Cable ends

Mark cables, terminate wire simultaneously

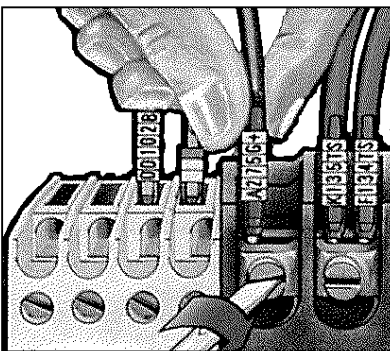

DZ5 Cable ends

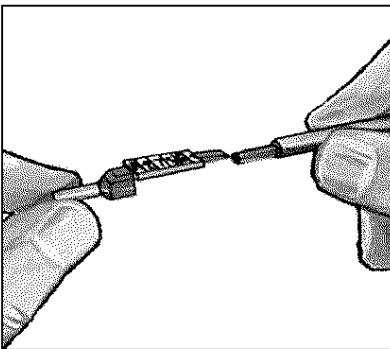

- The markers are always clearly visible. The tags are rigid and do not follow the cable contour

- The molding of the plastic over the metal ensure that the cable end slips easily over the conductor

- Mark cables and terminate wire simultaneously with no crimping tool required
- Modifications can be made without disconnecting wiring

- Markable type accepts up to 7 markers or use the plain version with your marker system

DZ5 Cable ends are ideal for every application and wire size
