

## Wireless Sensor for the early detection of cable overheating

#### **Customer case**

As a Specifier, you need to propose innovative solutions that not only meet, but exceed your client expectations.

Meet HeatTag, a smart wireless sensor that reduces the risk of fire whilst complying with relevant system standards to help your clients:

- Reduce costs
- Meet the rising expectations of guests / patients or tenants
- Drive efficiency through automation and intuitive technology solutions

#### **Our recommendation**

PowerLogic<sup>™</sup> HeatTag helps prevent electrical cabinets from damage by analysing airborne gas and particles 24/7. If an issue is detected then you are altered before an electrical fire starts.

HeatTag is much more than a fire or smoke detector – it scientifically detects overheating in electrical installations before any damage or fire can occur.

### **Benefits**

- Optimize customer OPEX and maintenance costs
- Ensure reliability and continuity of service in the electrical network
- Minimise fire risk
- Improve sustainability
- Reduce insurance fees
