

Sunset Switches

Clipsal Sunset Switches are light level sensing devices that turn on lighting once ambient light drops below the defined level and turn off lighting once ambient light increases. Sunset Switches are a reliable and convenient light switching solution that provides energy savings, as lighting is never left on longer than required. They are ideal for shop signage, car parks, pathways and garden areas.

Sunset Switches shall:

- Come in 2-wire and 3-wire designs
- Be available in three different weatherproof housings (WS226SSR Series, 56SSR Series and 31VSSR Series).
- Provide either a IP56 or IP66 rating
- Be compatible with fluorescent and resistive load currents of up to 10AX
- Have combination head screws on housing and terminals
- For replacement purposes ensure WS226SSR Series fits onto existing back boxes with 85x85 measurements
- Feature a 'dusk to dawn' setting to ensure by default that lighting connected to the Sunset Switch will be activated at dusk and switched off at dawn
- Be provided with an inbuilt timer that allows adjustment of lighting to be activated for a preset time of either 2, 4, 6, 8 or 12 hours
- Have a lux level setting that can be adjusted from 20 to 500 lux
- Operate on a default setting of approximately 20 lux (if the lux level is not set)
- Have a minimum two year warranty
- Have an operating voltage of 240V a.c. 50Hz
- Have WS226SSR Series models that are grey in colour and chemical resistant to manufacturer's specifications
- Have 56SSR Series models that are grey in colour and compatible with all 56 Series bases
- Have Clipsal 31VSSR standard range models that are white in colour.
