

Switches - Weather Protected

To combat the effects of the harsh Australian environment, Clipsal has developed a Weather Protected range of products – perfect for use in wineries, factories, exterior walls, on illuminated signs, around swimming pools, under pergolas, or when cleaning the car. Anywhere switchgear needs protection from the elements.

Weather Protected Light Switches shall:

- Be intended for use by persons to prevent access to hazardous electrical parts and also to protect equipment against ingress of solid foreign objects, dust, and harmful quantities of water
- Comply with IP ratings of AS 60529, where located externally to the building or in damp/dusty situations
- Comprise a heavy duty mechanism of rocker operation, similar to the Clipsal 30 Series
- Be mounted in a one-piece, moulded, impact and chemical resistant flush or surface plate
- Be manufactured in accordance with AS/NZS3100, AS/NZS3133 and other relevant Wiring Rules and Electrical Supply Authorities requirements
- Where required, fit flush mounted weather protected switches designed to fit standard pattern mounting accessories with 84mm mounting centres similar to Clipsal WSF226 and WSF226/2
- Where required, the isolating switch to have a 'lock off' or 'lock on' facility similar to Clipsal WHA Series. Suitable for hasp
- Ensure plates are engraved with circuit identification labelling, where required.
- Be of same type and manufacture as socket outlets.
