

Accessories Din-Rail Mount

A range of DIN rail mount accessories shall be available to provide the following:

- Auxiliary contacts
- Shunt trip release
- Socket outlets
- Timers
- Time delay relays
- Hour meters
- Light intensity switch
- Transformers
- Voltmeter and Ammeter
- Bells
- Contactors
- Impulse relays
- Push buttons
- Signal lamps
- Emergency lighting test kits.

In addition to the above, there are also padlocking devices, expansion terminals and Neutral links that are available for DIN rail accessories.

Over-voltage Protection Equipment

Equipment damage from over-voltage or power surges is caused from direct or indirect lightning strikes or when Supply Authorities perform defective electrical switching operations.

Over-voltage or Surge Protection shall:

- Divert extra voltage and energy surges to ground instead of allowing them entry into the home and into expensive equipment. This can be carried out by utilising Clipsal switchboard (DIN rail) mounted 970 Series over-voltage arrestors
- Have removable module options (970RM) to allow for replacement of surge protection without DIN rail or cable removal
- In addition to 970 Series provide smaller protection within the home/office at the Socket Outlet by utilising Clipsal 25SF, 2025SF, and C2025SF surge protected socket outlets. Plug-In surge protected socket adaptors may also be utilised as per Clipsal 463SF.
