146V Vertical mounting bracket

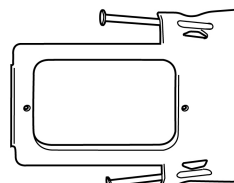

9416175117381

DESCRIPTION

Metal Mounting Bracket

146V

146H

BOX QUANTITY 25

OUTER QUANTITY Nil

FEATURES

Manufactured from galvanised steel for maximum strength and corrosion resistance.

Versions for both vertical and horizontal mounting accessories. A lip and curved corners on the brackets guide the saw around the hole and protect the saw blade - we recommend a jigsaw or plaster board saw is used to cut holes in plaster board.

Extra large aperture (75.5mm x 55mm) accommodates even the largest accessories.

Holes for accessory mounting screws have more thread engagement than other brands, making them less prone to stripping.

APPLICATIONS

Ready to go - prefitted, captivated nails.

Designed to make working with architraves easy - extra wide flange.

Ideal for timber framed buildings - brackets can be easily located once the wall has been clad using a metal detector.

COMMENTS

This type of mounting accessory is widely used in Australia because it is able to be quickly installed. Time saving features make it faster than flush boxes.
