DESCRIPTION RCD Horizontal Twin Switched Socket 10A, 30mA & 10mA

BOX QUANTITY 1 **OUTER QUANTITY** 10

FEATURES

- 20A resistive rating on RCD unit, meaning that other sockets can be wired downstream to benefit from RCD protection.
- 30mA RCD protection for personal safety, and 10mA RCD protection for sensitive equipment.
- Average unit tripping time of 0.03 of a second to minimise exposure to a fatal shock situation.
- Mechanical indication of device status – indicates whether the RCD is latched or has been tripped.
- Amber neon indication of power availability.
- Unit remains latched in loss of voltage situations – doesn't need to be reset.
- Double pole switching protects against faulty wiring.
- Large clearly labelled terminals for input (Line) and output (Load).
- Mounting Centres 84mm
- 230-240V a.c. 50Hz
- Maximum load: 4800W
- Type tested to AS/NZS3190
- All PDL RCDs are tested rigorously to ensure maximum quality and reliability in the field.

NEW PRODUCT DATA AND APPLICATION SHEET

APPLICATIONS A double horizontal switched socket providing RCD protection. 30mA RCD, ideal for anywhere where personal protection is required when using electrical appliances and equipment, minimising the risks of fatal electric shocks to people. Perfect in the household environment, especially in the kitchen, bathroom, and other high usage areas. 10mA RCD, ideal for anywhere where protection of sensitive equipment and appliances is needed. Commonly used in hospitals, medical centres, and nursing/retirement villages.

COMMENTS Vertical twin version (692) not available.
Metal Covers available as special make to order product.
Note: Product changed to large rocker variety 2003.
