

**IH 24h**

Operating instructions

Art. no.  
srm: CCT16364  
arm: CCT15365

**For your safety**

**⚠ DANGER**  
Risk of serious damage to property and personal injury, e.g. from fire or electric shock, due to incorrect electrical installation.

Safe electrical installation can only be ensured if the person in question can prove basic knowledge in the following areas:

- Connection to installation networks
- Connecting several electrical devices
- Laying electric cables

These skills and experience are normally only possessed by skilled professionals who are trained in the field of electrical installation technology. If these minimum requirements are not met or are disregarded in any way, you will be solely liable for any damage to property or personal injury.

**Getting to know IH 24h**

IH 24h is a mechanical time switch that switches connected loads on or off when the set time has been reached. It is installed on a DIN rail (DIN EN 60715).

**Product details**

- (A) Manual switch
- (B) Setting disc
- (C) Switching segments
- (D) Automatic/permanent switch
- (E) Clock hands (hour, minutes)
- (F) Display: Morning (3/6/9), afternoon (15/18/21)
- (G) Rotary knob
- (H) Switch output
- (I) Mains connection

**Installing IH 24h**

- 1 Place the IH 24h onto the DIN rail.
- 2 Connect cables:
  - Remove 8 mm (max. 9 mm) of insulation
  - Open the plug-in terminal with a screwdriver and plug in the cable at a 45° angle. (max. 2 cables per plug-in terminal)

- 3 Connect the mains voltage.

**i** IH 24h arm (art. no. CCT15365) is equipped with a quartz clock mechanism. The quartz clock mechanism only starts after a few minutes after having connected it a power supply. Complete power reserve is reached after 5 days.

**Setting IH 24h**

**Setting the time**

Use the rotary knob to set the time (hour, minutes). You can turn the rotary knob clockwise and anti-clockwise.

To set the time in the morning, 3/6/9 must be visible on the clock face.

To set the time in the afternoon, 15/18/21 must be visible on the clock face.

**i** The clock face changes between morning and afternoon times when the dial has gone past 24 and 12 hours.

**Setting the switching time**

You can set the switching time using the switching segments. Each switching segment stands for a 15-minute time period. The switching segments can be pushed in or out, for example, by using your index finger. The setting disc shows the switching period (+/- 5 minutes).

- 0 Switching segment out Load switched off
- 1 Switching segment in Load switched on

- Example times:**
- (A) Switching time 1 = 6:00 - 10:00
  - (B) Switching time 2 = 17:00 - 21:00

**Operating IH 24h**

**Operating the manual switch**

You can switch the load on or off in advance as long as the time switch is on automatic mode ☺.

- 1 Turn the manual switch by one position anti-clockwise.

The current status is reversed and stays unchanged for the next switching

**Operating the automatic/permanent switch**

With the automatic/permanent switch, you can switch the load permanently on or off or permanently set it to automatic mode.

- Activating permanent ON: ☺  
Set the switch to "1".  
The load is switched on permanently. The set switching times are deactivated.
- Activating permanent OFF: ☹  
Set the switch to "0".  
The load is switched off permanently. The set switching times are deactivated.
- Activating automatic mode: ☺  
Set the switch to "clock". The set switching times remain activated. The load is switched on or off when the set switching time has been reached.

**i** For permanent ON or permanent OFF, the set switching times are deactivated.

**Technical data**

Nominal voltage:	CCT16364	AC 230 V (+10% / -15%)
	CCT15365	AC 110 - 230 V (+10% / -15%)
Frequency:	CCT16364	50 Hz
	CCT15365	50/60 Hz
Nominal current:		16 A, cos φ = 1 4 A, cos φ = 0.6
Incandescent lamps:		AC 230 V, max. 1000 W
Halogen lamps:		AC 230 V, max. 1000 W
Fluorescent tubes:		AC 230 V, max. 600 VA
Fluorescent lamps with electronic ballast:		2 x 40 W (12 μF), parallel-compensated
Compact fluorescent lamps with electronic ballast:		25 W
LED lamps:		5 W (LEDs <2 W) 15 W (LEDs 2-8 W)
Power consumption:		srm = 0.9 W arm = 0.5 W
Ambient temperature:		-20°C to +55°C
Connecting terminals:		2 x 0.5 - max. 2.5 mm <sup>2</sup> , fixed and flexible wires
Power reserve:	CCT15365	200 h (230 V), 100 h (110 V)
Accuracy:	CCT16364	Network synchronous
	CCT15365	≤ ±1 s/day at +20°C
Protection class:		II per EN 60730-1 when installed correctly
Type of protection:		IP 20 in accordance with EN 60529
