PrismaSeT G - Reliable, Easily connected

New design with sustainable packaging

Enhance buildings with in-built connectivity and efficient design

The new design of PrismaSeT G increases the robustness of the panels, helps to gain efficiency on every level and provides peace of mind to the panel builders, electrical contractors and facility managers.

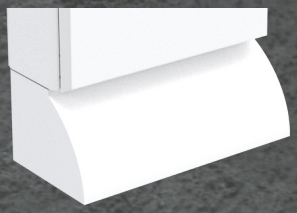
In addition, the new 100% green packaging decreases the quantity of waste and its disposal cost by using only cardboards.

Green Packaging

- Progressive cancellation of plastic and polystyrene of packaging.
- 100% recyclable cardboards.
- Time & money saving to sort waste.
- New cross beam in cardboard for a more robust packaging.

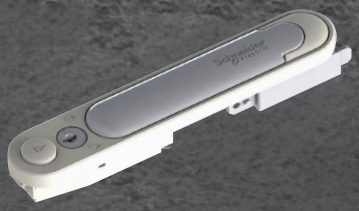
Increase Plinth Robustness

- Metallic reinforcement all along the plinth to facilitate transportation.



New Improved Handle

- More robust handle.
- Ergonomic handle design.
- Aesthetically appealing look.



Digital Instruction Sheets

- Cancellation of systematic printed instruction in each packaging.
- 1 printed 'Super Leaflet' with all instructions (available to order once).
- 1 systematic QR code to link to the right instruction sheets.

Wireless Sensor for Early Detection of Overheating Cables

SMT10020

HeatTag is a smart sensor for early detection of overheating wire connections or overheating cables. HeatTag helps prevent electrical switchboards from being damaged, by analyzing gas and particles in the air and sending alerts before any smoke or insulator browning.

Standards

The HeatTag smart sensor complies with the following standards:
- IEC 61010-1:2017 UL/CSA/EU CENELEC deviations
- IEC/EN 61326-1b FCC Part 15B and 15C
- ETSI/EN 300328
- ETSI/EN 301489-1
- IEEE 802.15.4

Note:
Do not use HeatTag as a safety device. HeatTag does not replace the fire protection devices of the building.

Presentation

HeatTag smart sensor:
- Sends three levels of alert depending on the severity of the situation it detects.
- Helps prevent potential fire damages by analyzing gas and micro-particles emitted by cable sheaths when overheating.
- Measures temperature and humidity.
- Communicates with all Schneider Electric EcoStruxure panel servers or gateways.
- Is integrated in EcoStruxure solutions.

The HeatTag sensor must be installed only in non-forced air ventilated switchboards. It must be mounted on a DIN rail.
During the first 30 minutes after commissioning, HeatTag can generate an alert for test. It then takes another 8 hours for HeatTag to define its nominal environment and to be fully operational. Each time the HeatTag sensor is powered on, these 30-minute and 8-hour sequences are repeated.

Operation

Paired with Schneider Electric panel servers or gateways, HeatTag reports:
- Alerts
- Air quality index
- Temperature and humidity measurement
- Self-diagnosis information

Air Quality

HeatTag provides an air quality index, ranging from 0 to 10, and displays the air quality evolution trend in a table.
When the air quality index is equal or above 10, HeatTag sends an alert. It has detected abnormal cable sheath heating in the switchboard.

Detection Alert

An alert is triggered when HeatTag detects abnormal cable sheath heating in the switchboard, which can be caused by:
- One or more loose connections (too high contact resistance)
- A poorly sized cable compared to the rated current
- Overcurrent and poorly regulated protective equipment

Alerts are triggered with three severity levels:
- Low level: a cable is slowly overheating in the installation, you must plan a maintenance visit of the installation.
- Medium level: a cable is overheating in the installation, you must go quickly to the installation for maintenance.
- High level: a cable overheats very quickly, you must check the installation immediately.

The orange application led flashes when HeatTag sends an alert to the panel servers or gateways.

Temperature

HeatTag provides a temperature value with a 30 second default transmission period. The transmission period can be increased by the system in case of high wireless data traffic.

Humidity

The HeatTag provides a humidity rate with a 30 second default transmission period. The transmission period can be increased by the system in case of high wireless data traffic.

Self-Diagnosis

HeatTag carries out two types of diagnosis:
- A minor alert is sent when the fan rpm is 80% of its nominal rpm, which means fan clogging.
- A major alert is sent when HeatTag is faulty. In this case it cannot report measures at all, nor reports incorrect measures.

Wireless Sensor for Early Detection of Overheating Cables

HeatTag Smart Design

- No settings
- Nominal environment auto-learning to avoid false alerts
- Concentrator auto-discovery
- Alerts generated by a powerful algorythm integrated in HeatTag

Electrical Characteristics

Supply voltage	110-277 V AC, -15 % / +15 %
Frequency	50-60 Hz
Max. consumption	0.1 A
Operating temperature	-15 °C / +70 °C (5 °F to 158 °F)
Storage temperature	-20 °C / +85 °C (-4 °F to 185 °F)
Relative humidity in operation	15-90 %
Altitude of use	0-2000 m (0-6500 ft)
Degree of pollution (IEC 60664-1)	3
Overvoltage category	OVC III

Sensor Characteristics

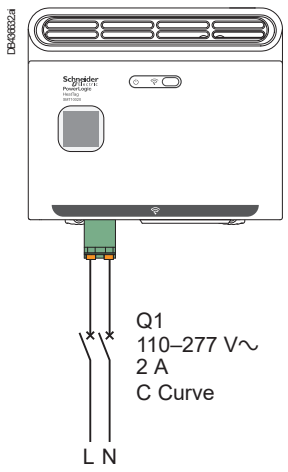
Temperature measurement	Measurement range	-15 °C / +70 °C (5 °F to 158 °F)
	Measurement accuracy	-1.1 °C / +1.1 °C
	Default transmission period	30 seconds (higher in case of high wireless data traffic)
Humidity measurement	Measurement range	15–90 %
	Measurement accuracy	±9 RH %
	Default transmission period	30 seconds (higher in case of high wireless data traffic)
Air quality		Index (0 to 10), alert generation when index ≥ 10
Test alert after pairing		During the first 30 minutes
Environment auto-learning phase		8 hours after the first 30 minutes

Installation

Communication Architecture
List of compatible communicators:

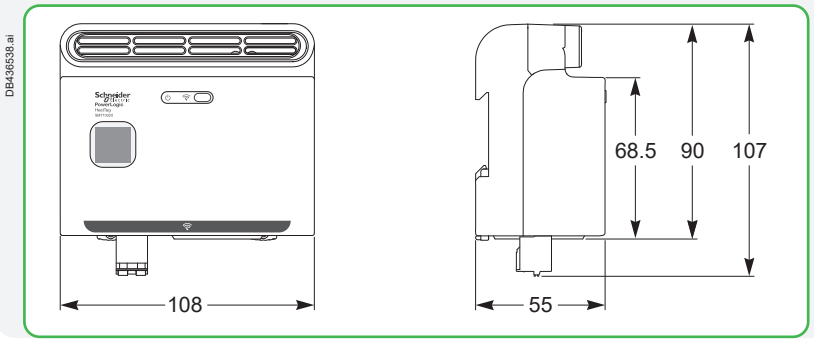
- EcoStruxure Panel Servers
- PowerTag Link
- Prisma**SeT** Wireless Panel Server

Wiring
HeatTag must be protected by 2 A breaker.
It is delivered with a separate connector.



Mechanical Characteristics

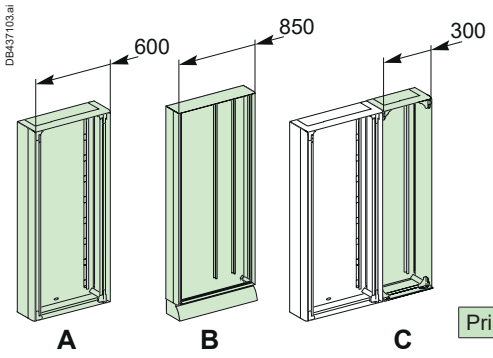
Dimensions (w x h x d)	108 x 107 x 55 mm
Weight	270 g
Degree of protection (IEC 60529)	IP20



Wireless Sensor for Early Detection of Overheating Cables

Integration in PrismaSeT G

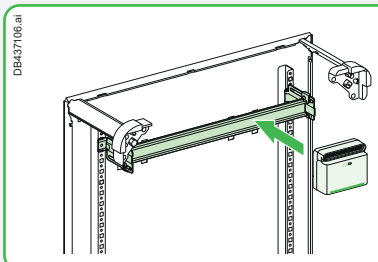
HeatTag must be installed following the Instruction Sheet recommendations (MFR5173801-02).



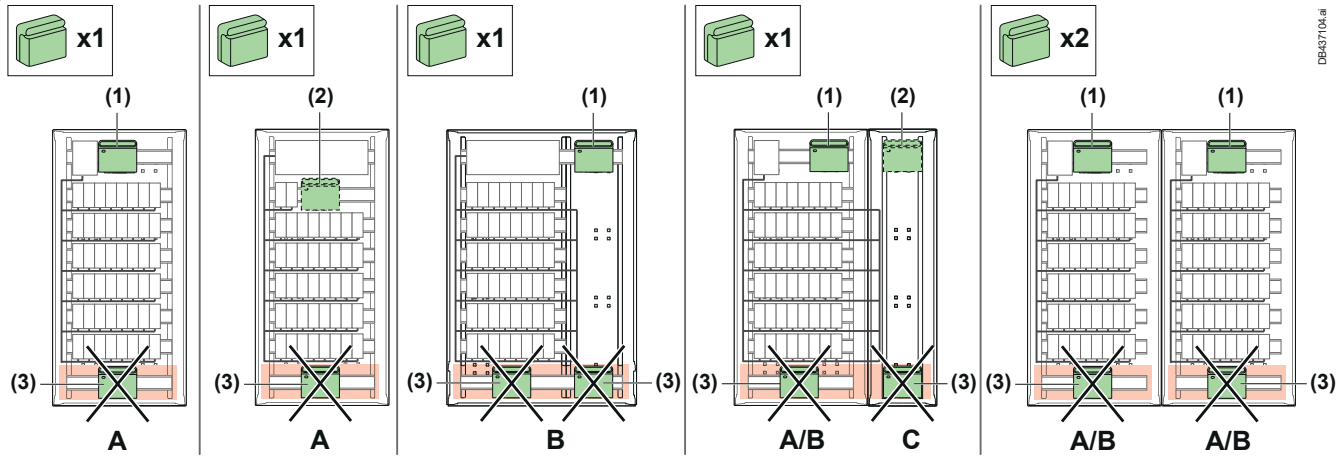
PrismaSeT G	A	B	C
	■	■	■

B

HeatTag must be installed on a DIN rail.

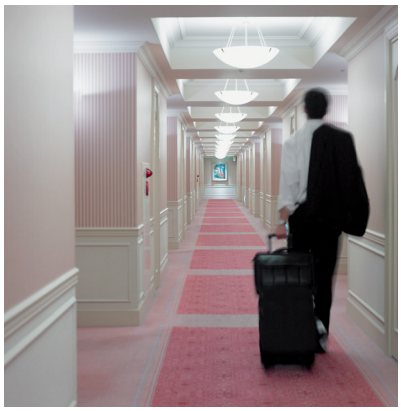


Ref. LVS03010 for width = 300 mm
Ref. LVS03001 for width = 600 mm
Ref. LVS03006 for width = 850 mm



(1) Recommended installation
(2) Possible
(3) Forbidden

To respond to increasing building requirements



Improve the continuity of service

Ensure the safety of life and property

Control deadlines and costs

PrismaSeT:

the optimised, tested and IEC compliant solution, for low voltage electrical distribution and control switchboards.

B

PrismaSeT,
a comprehensive range of enclosures and cubicles

> A solution based on more than **30 years of experience** in low voltage switchboards.

> Integrating Schneider Electric switchgear offerings and ensuring electrical, mechanical and communication **functions complete consistency**.

> Quality production, **certified ISO 9001** and manufactured in Montmélian (France).

PrismaSeT G enclosures up to 630 A IP30, IP40, IP41, IP43, IP55

630 A

- Small companies
- Buildings
- Offices
- Laboratories
- Healthcare centres
- Hotels
- Supermarkets
- Malls, etc.

250 A

- Schools
- Small shops
- Hotels, etc.

PrismaSeT G Pack 250

PrismaSeT G

PrismaSeT P cubicles up to 4000 A IP30, IP31, IP55

The optimised, tested and IEC compliant solution, for low voltage electrical distribution and control switchboards.

- Hospitals
- Data centres
- Logistics centres
- Shopping centres
- Offices buildings
- Medium industrial solutions

PrismaSeT P

Simple, functional systems for safe, upto 630 A

Switchboards that are safe…

With **PrismaSeT G** you can be sure to build **100 % Schneider Electric** switchboards that are safe, optimised:

> All components (switchgear, distribution blocks, prefabricated connections, etc.) are perfectly rated and coordinated to work together;

> All switchboard configurations, even the most demanding ones, have been tested.

You can prove that your switchboard meets the current standards, at any time.

You can be sure to build a reliable electrical installation and give your customers full satisfaction in terms of dependability and safety for people.

…aesthetics

PrismaSeT G with its discreet design, blends harmoniously into all tertiary buildings, including in entrance halls and passageways.

Available power

Safety of people and property

Controlled costs and delivery times

Upgradeability

upgradeable LV switchboards

…optimised and upgradeable

With **PrismaSeT G** you can build just the right switchboard for your customer, sized precisely to fit costs and needs. With this complete, prefabricated and tested system, it's easy to upgrade your installation and still maintain the performance levels.

> The wall-mounted and floor-standing enclosures combine easily with switchboards already in service.

> Devices can be replaced or added at any time.

Simple gestures for cabling in the workshop

All connection points are fully accessible and easy to check.

Efficient installation and connection work on site

Easy connection on site, whatever the cable cross-section or installation location.

Easy maintenance throughout the switchboard

Easy and direct access to devices, in a switchboard in service.

The switchboard, central to the electrical installation

Both the point of arrival of energy and a device for distribution to the site applications, the LV switchboard is the intelligence of the system, central to the electrical installation.

It plays an essential role in the availability of electric power, while meeting the needs of personal and property safety. Its definition, design and installation are based on precise rules; there is no place for improvisation. The IEC 61439 standard aims to better define "low voltage switchgear and controlgear assemblies", ensuring that the specified performances are reached. It specifies in particular:

> the responsibilities of each player, distinguishing those of the original equipment manufacturer; the organisation that performed the original design and associated verification of an assembly in accordance with the standard, and of the assembly manufacturer - the organisation taking responsibility for the finished assembly;

> the design and verification rules, constituting a benchmark for product certification.

All the component parts of the electrical switchboard are concerned by the IEC 61439-2 standard. Equipment produced in accordance with the requirements of this switchboard standard ensures the safety and reliability of the installation.

A switchboard must comply with the equirements of standard IEC 61439-1 and 2 to guarantee the safety and reliability of the installation. Managers of installations, fully aware of the professional and legal liabilities weighing on their company and on themselves, demand a high level of safety for the electrical installation.

What is more, the serious economic consequences of prolonged halts in production mean that the electrical switchboard must provide excellent continuity of service, whatever the operating conditions.

The Schneider Electric solution

> Specify switchboards that comply with standard IEC 61439-1 and 2.

> Guarantee a level of safety that has been 100 % tested, from the day the switchboard is installed and throughout its service life.

> Ensure a lasting investment through easy upgrading of the installation in compliance with the standard.

> Guarantee that the switchboard complies with the technical specifications.

PrismaSeT tested switchboards

The conformity of the switchboard has been tested and proven.

A PrismaSeT switchboard is:

> made up of Schneider Electric low voltage devices and components that all comply with the applicable standards;

> based on configurations in our catalog;

> made up of PrismaSeT and Linergy mechanical and electrical components that have been subjected to the verification of original equipment manufacturer;

> mounted and wired by a panelbuilder in compliance with professional standards;

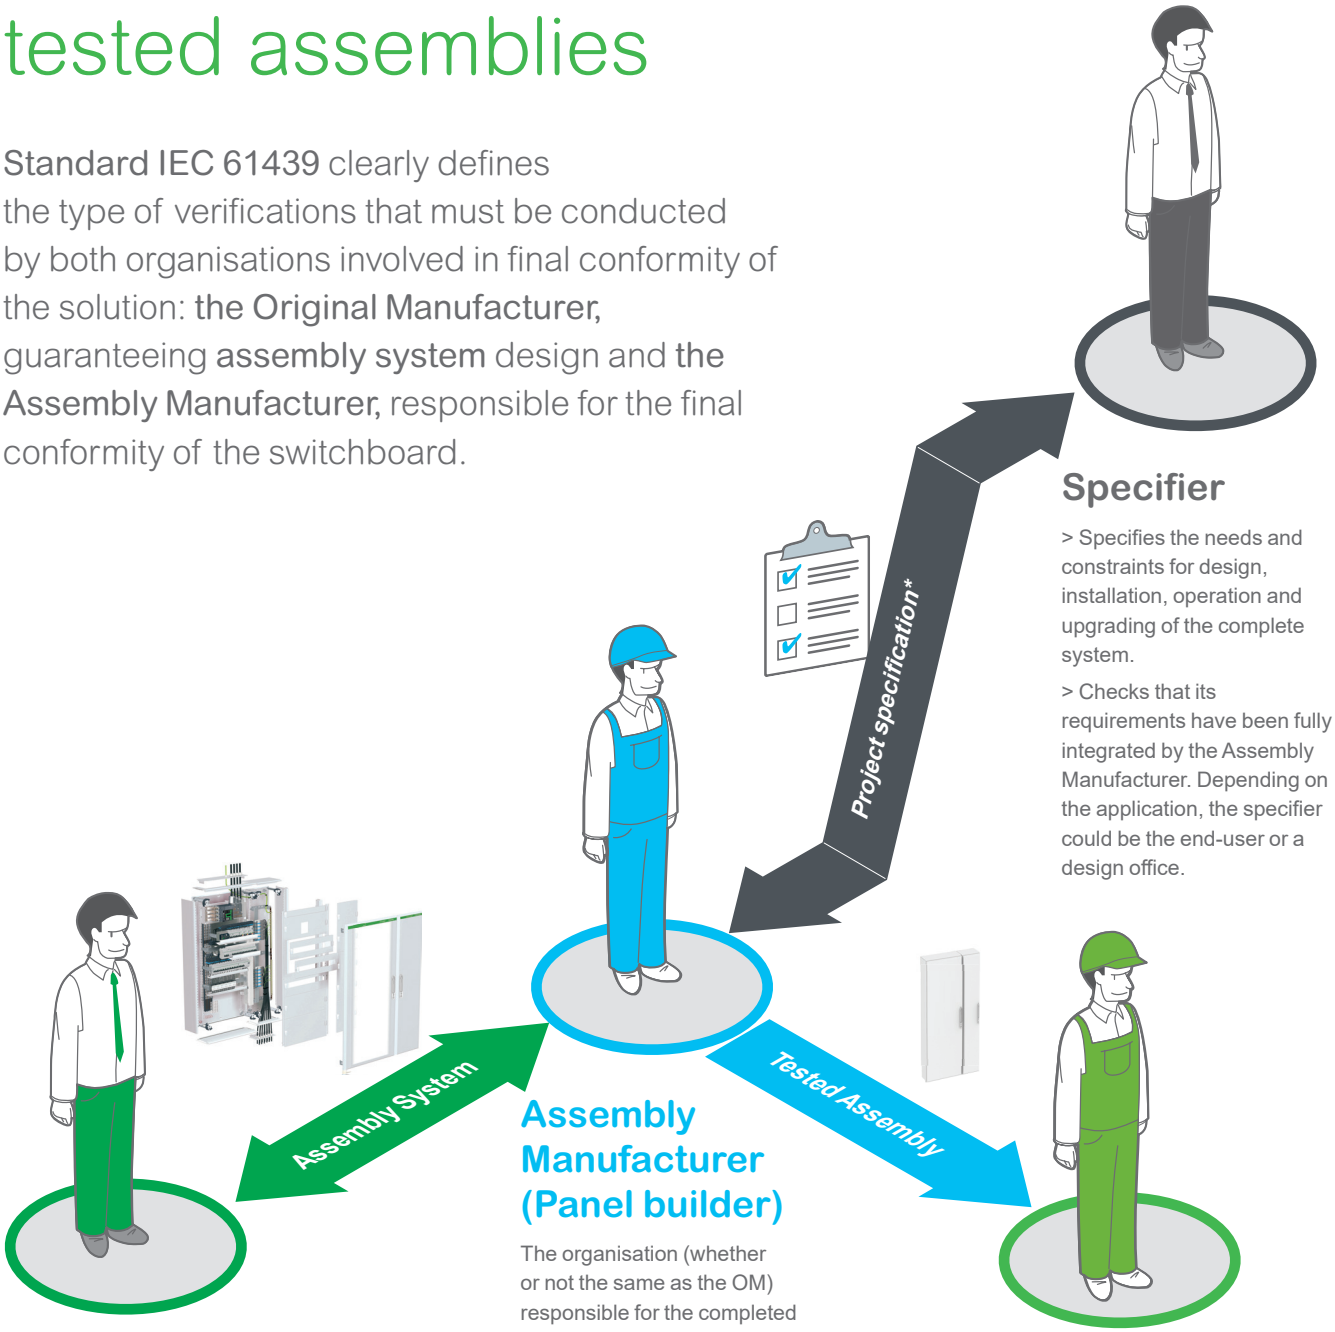
> subjected to the individual verification.

Schneider Electric makes available to the panelbuilder everything required to create tested PrismaSeT switchboards, including the basic configurations in the low voltage distribution catalog, all the documentation for switchboard design and mounting, calculation and design software, etc.

Panelbuilders can demonstrate conformity with standard IEC 61439-1 and 2 by presenting the declarations or certificates of conformity for type tests carried out by independent laboratories (ASEFA, ASTA, etc.) and supplied by Schneider Electric. The panelbuilder is responsible for the individual routine verification and delivers the corresponding declarations of conformity.

Original Manufacturer and Assembly Manufacturer: Both involved in tested assemblies

Standard IEC 61439 clearly defines the type of verifications that must be conducted by both organisations involved in final conformity of the solution: **the Original Manufacturer,** guaranteeing **assembly system** design and **the Assembly Manufacturer,** responsible for the final conformity of the switchboard.



Specifier

> Specifies the needs and constraints for design, installation, operation and upgrading of the complete system.

> Checks that its requirements have been fully integrated by the Assembly Manufacturer. Depending on the application, the specifier could be the end-user or a design office.

Assembly Manufacturer (Panel builder)

The organisation (whether or not the same as the OM) responsible for the completed **assembly**.

He is responsible for **"Routine verifications"** on each panel produced, according to the standard.

If he derivates from the instructions of the original manufacturer he has to carry out again design verifications.

Original Manufacturer

The organisation that has carried out the original design and the associated verification of an **assembly system**.

He is responsible for the **"Design verifications"** listed by IEC 61439-2 including many electrical tests.

End-User

Should ask for a certified LV switchboard.
By systematically requesting routine verifications, he ensures that the assembly system used is compliant.

** Schneider Electric has developed a specification guide.*

The main 10 functions of standard IEC 61439

For each of the following 10 functions, the standard IEC 61439 requires design verifications from the system manufacturer - mainly through type-tests - and routine verifications on each panel from the Panel Builder to achieve 3 basic goals: safety, continuity of service and compliance with end-user requirements.

Safety

Voltage stresses withstand capability

To withstand long term voltages, and transient and temporary overvoltages according to the insulation coordination principles and requirements.

Current-carrying capability

To protect against burns and to withstand temperature rise:
> when any circuit is continuously loaded, alone, to the specified current
> when the **assembly** is loaded to the specified current according to the specified load pattern (between circuits and/or as a function of the time).

Short-circuit withstand capability

To withstand the stresses resulting from the prospective short-circuit current and from the associated data (High forces between conductors, temp. rise in a very short time, air ionization, overpressure).

Protection against electric shock

> Hazardous-live-parts not to be accessible (basic protection)
> Accessible conductive parts not to become hazardous-live (fault protection).

Protection against risk of fire or explosion

> Resistance to internal glowing elements
> **Note:** protection of persons, and optional protection of the **assembly**, against arcing due to internal fault can be specified through a "special test" according to IEC 61641.

Continuity of service

Maintenance and modification capability

Capability to preserve continuity of supply without impairing safety during **assembly** maintenance or modification
> Electrical condition of the **assembly** or various circuits
> Speed of exchange of the functional units
> Test facilities…

Electro-Magnetic compatibility

To properly function (immunity) and not to generate EM disturbances (emission) in specified environmental conditions:
> Industrial networks or locations (Environment A)
> Domestic, commercial, and light industrial locations (Environment B).

Compliance with end-user requirements

Capability to operate the electrical installation

To properly function, according to:
> The electrical diagram of the overall system and related information (voltages, coordination…)
> The specified operating facilities (e.g. free or restricted access to Man Machine Interfaces, isolation of the outgoing circuits…).

Capability to be installed on site

> To withstand handling, transport, storage… and installation constraints
> Capability to be erected and connected (type of enclosure, type, material and cross sectional areas of external conductors).

Protection of the assembly against mechanical and atmospheric environmental conditions

> Presence of water or solid foreign bodies (IP according to IEC 60529)
> External mechanical impacts (optional IK according to IEC 62262)
> Depending on indoor or outdoor installation defined by original manufacturer (test humidity, UV).

IEC 61439-1 and 2 paragraph 11.4

Protection against electric shocks and integrity of protection circuits

The following should be checked visually:
> presence of protective shields against direct and indirect contacts on live parts;
> presence of the PE conductor.

The continuity of protection circuits is ensured by compliance with the assembly instructions delivered with each product.

IEC 61439-1 and 2 paragraph 11.5

Integration of incorporated components

The assembly manufacturer must comply with the instructions of the original equipment manufacturer for installation and wiring of the components used.

IEC 61439-1 and 2 paragraph 11.6

Internal electric circuits and connections

Schneider Electric recommends marking the nut with a tinted acrylic lacquer, indelible and temperature-resistant.

This allows:
> not only self-checking to check effective tightening to torque;
> but also identification of any loosening.

IEC 61439-1 and 2 paragraph 11.9

Dielectric properties

The main circuits, and the auxiliary and control circuits connected to the main circuit, shall be subjected to the test voltage in accordance.

IEC 61439-1 and 2 paragraph 11.10

Wiring, operating performance and function

Verification of wiring and marking conformity with the drawings, parts list and diagram.

Standard individual check sheet

in accordance with the IEC 61439-1 and 2 standard from the assembly manufacturer (panelbuilder)

The PrismaSeT G functional system can be used for all types of low voltage distribution switchboards up to 630 A, in commercial and industrial environments.

PB113427.eps

PD390228_SE_2013.eps

Switchboard design is very simple

1 A metal structure

The switchboard is made up of one or more enclosures, combined width-wise and/or height-wise, with a choice of doors (plain or transparent).

2 A distribution system

A complete offer of centralised or row distribution blocks, with busbars in duct or on rear of enclosure, provides current distribution over the full height of the switchboard.

3 Complete functional units

Built around each device, the functional unit includes:

- a dedicated mounting plate for device installation
- a front plate to block direct access to live parts
- prefabricated busbar connections to connect devices to the busbar
- cable-running accessories can be clipped onto the back of double-profile modular rails.

Each functional unit contributes to a function in the switchboard.
The system includes everything required for functional unit mounting, supply and connection.
The Prisma**SeT** G and functional unit components, in particular, have been designed and tested according to device characteristics.
This design approach ensures a high degree of reliability in system operation and optimum safety.

Assets of PrismaSeT switchboards

1 A dependable electrical installation

The total compatibility of Schneider Electric devices with the Prisma**SeT** enclosure is a key advantage in ensuring a high level of installation dependability.

2 An upgradeable electrical installation

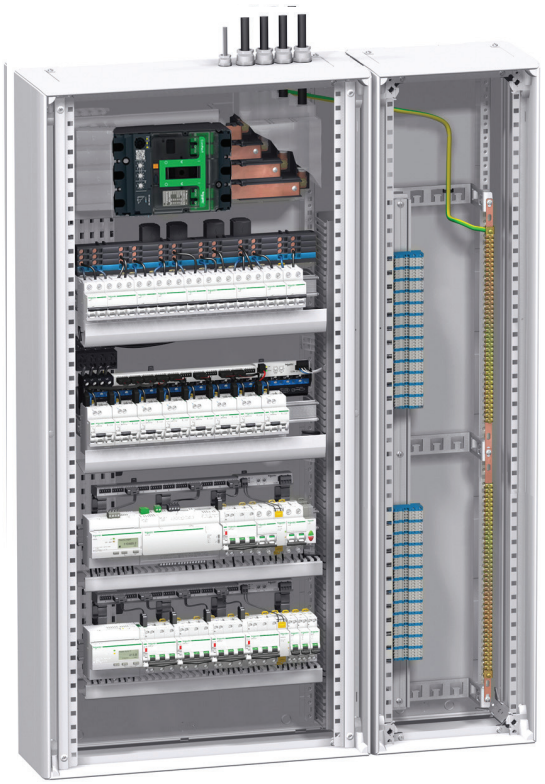
Thanks to modular design, Prisma**SeT** switchboards can be easily modified to integrate new functional units as needed.
Maintenance operations, carried out with the switchboard de-energised, are fast and straight-forward due to easy access to devices.

3 Total safety for personnel

Work in a switchboard must be carried out by authorised persons in compliance with all applicable safety regulations.
To increase the safety of personnel, devices are installed behind protective front plates; only the operating handles are accessible.
Additional internal protection (partitions, barriers) is available to protect against direct contact with live parts.
Terminal shields are mandatory for installing ComPacT NSX and INS/INV devices in Prisma**SeT** for even more personnel safety.

System design has been validated by type tests as per standard IEC 61439-1 & 2 and benefits from the combined experience of Schneider Electric over many years.

PB115632_73.eps



Electrical characteristics

Comply with IEC 62208 and EN 62208 standards:
- rated insulation of main busbars at rear of enclosure: 1000 V
- InA: 630 A
- rated peak withstand current Ipk: 53 kA
- short-circuit current Icc: 70 kA
- frequency: 50/60 Hz

Mechanical characteristics

- Steel sheet metal
- Electrophoresis treatment + hot-polymerised polyester epoxy powder, white colour RAL 9003.
- Enclosures supplied in kit form, totally dismountable, designed to be assembled and wired horizontally on a work station.
- Can be combined side by side and one on top of another
- Degree of protection:
  - IP30: without door
  - IP40: with door
  - IP41: with door + canopy
  - IP43: with door + gasket + canopy
  - IP55: IP55 Prisma**SeT** G offer, supplied in kit form
- degree of protection against mechanical impacts:
  - IK07: without door
  - IK08: with door (transparent)
  - IK10: with plain door
  - IK10: for Prisma**SeT** G IP55
- Seismic characteristics: 2,5G without accessories
- Enclosure dimensions:
  - 3 widths:
    - W = 300: ducts 10 modules width
    - W = 600: Wall-mounted and floor-standing enclosures, 24 modules width
    - W = 850: Floor-standing enclosures 36 modules width
  - depth with door:
    - enclosures G IP30: 250 mm
    - enclosures G IP55: 260 mm
  - heights:
    - Prisma**SeT** G IP30: 12 heights: 330 mm to 1980 mm
    - Prisma**SeT** G IP55: 7 heights: 450 mm to 1750 mm
- Inside switchboards.

Readily available close by

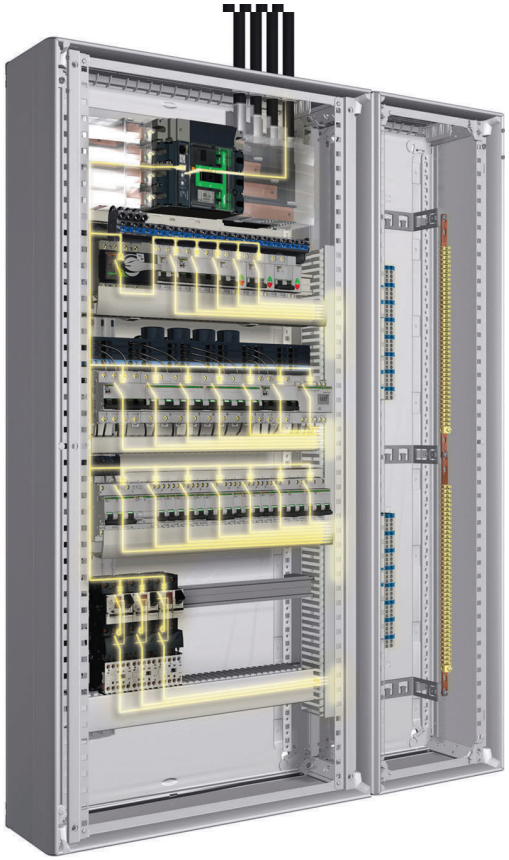
The kit concept makes handling and transport easier and you get to benefit from Schneider Electric's efficient international logistics. Your distributor, hand-picked by Schneider Electric, can give you the very best advice.

For Switchboard Assembly and Earthing Continuity instructions, refer "How to Assemble the Electrical Switchboard"

Guide PHA2165500

Electrical switchboards built using the Prisma**SeT** functional system and Schneider Electric recommendations fully comply with international standard IEC 61439-1&2.

With PrismaSeT, your solution is 100 % optimised



Flexible design for building applications and their operation

Thanks to PrismaSeT solutions, design offices can design and customise switchboards easily and quickly:

> organisation by functional units, each corresponding to an application in the building (lighting, HVAC, lifts, etc.)

> organisation by dedicated physical zones: one for functional units (switchgear, mounting plates, front plates), one for power distribution, and one for connections.

100 % dependable and optimised design, in compliance with costs and deadlines

By supporting design offices with the services and software tools (Ecodial, Rapsody...) needed to quickly design switchboards, we help them to highlight their professionalism: switchboards with tested architectures to meet the most stringent specifications.
Our tools and services also enable them to meet requirements concerning compliance with costs and deadlines: optimised selection of the appropriate components for each switchboard (switchgear, distribution systems, enclosures with perfect electrical and mechanical consistency), front panel design and fast cost studies.

*

100 %

of dedicated building switchboard architectures are tested in compliance with IEC standards and can be customised.

Modular devices

Acti 9

NG125, C120 circuit breakers INS-INV40/160 switch disconnector

Presentation

A double-profile modular rail offering a high level of performance
Made of an aluminium alloy with a magnetic properties, the
rail design is extremely rigid. The rail supports are crimp mounted.

Fast mounting

The supports have positioning studs to guide the rail on the rear uprights. Only two mounting screws are required.

Multiple functions

A number of devices can be clipped directly onto the rails, including Linergy FM 80 and 200 A distribution systems, all horizontal cable-running accessories such as cable straps and trunking supports, as well as the supports for Linergy TB earth bars.

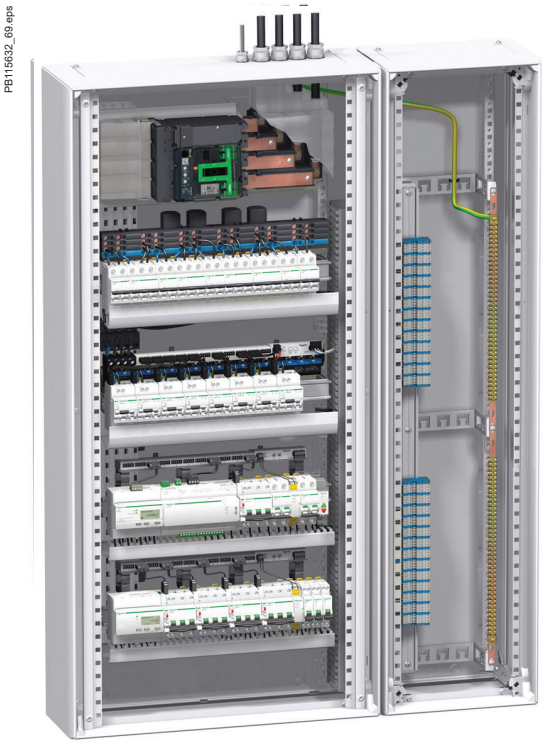
Supply from all directions

Supply to the rows, using Linergy FH comb busbars or Linergy FM distribution systems via:

> Linergy BS or insulated busbar Linergy BW installed behind the devices.
> Linergy BS busbar installed in the duct.

Centralised power supply

Via Linergy DX or DS distribution blocks, Linergy DP.



Distribution

Linergy FM 80 and 200 A device feeders

> Fast and secure front connection using spring terminals.
> Reliable connections, with balanced tightening, insensitive to vibrations and thermal variations.
> All types of modular devices can be mixed.
> Easy balancing of phases.
> Interchangeable devices.
> Easy installation upgrades.
> Fully insulated (IPxxB).

Linergy FH comb busbars

> Direct connection to device terminals or via a connector.
> Fully insulated.
> Can be cut to length.

Linergy DX quick distribution blocks

> *See page D-10*

Linergy DP distribution blocks

> *See pages D-12, D-13*

Linergy DS screw distribution blocks

> *See page D-14*

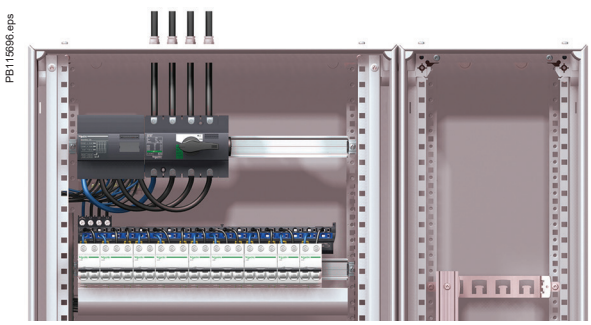
Cable running

Straps

> Easy and fast to install.
> Low cost.
> Perfectly organised and integrated cable running.
> Professional finish.
> Mounting at the back of modular rail, very comPacT dimensions.

Trunking

> Traditional solution.



Upgradeable PrismaSeT functional units = the best electrical + mechanical + communication consistency.

Functional units include switchgear mounting plates, front plates, connections, barriers for ensuring the best level of continuity of service, and helps in securing life and property.

ComPacT NSX circuit breakers for PrismaSeT G Source changeover system

Presentation

A range of intelligent circuit breakers

ComPacT NSX improves management of electrical installations

In addition to protection functions, the new generation of ComPacT NSX moulded-case circuit breakers provides new features (analysis, measurements and communication) with access to information:

> either directly on the LCD screen of the trip unit to set the circuit breaker or read the main electrical values, including U, I, f, P(W) and E (kWh)
> or on the FDM 121 or FDM128 display on the front of the PrismaSeT switchboard (duct door with special front plate) for quick access to a greater wealth of information.

A cable connects the display to the trip unit without any special settings or configuration, making it easy to personalise alarms and displays or read event logs and maintenance indicators.

Integration of ComPacT NSX in PrismaSeT

Installation of ComPacT NSX devices in a PrismaSeT functional switchboard is very easy and made of a functional unit system:

> dedicated mounting plates for ComPacT NSX offer
> matching power connections Linergy DP distribution block and prefabricated connections, connection blocks, power supply blocks)
> partitioning
> compliance with the safety perimeter, by design.

Installation architectures for the measurement function

ComPacT NSX circuit breakers equipped with Micrologic 5/6 A or E trip units provide measurements that can be read on the FDM 121 or FDM128 display module or directly on the circuit breaker. This makes it possible to optimise the space required by the functional unit.

Installation times have also been reduced with respect to system with current transformers.

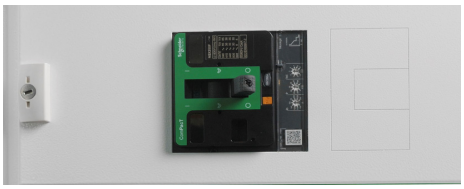
What is more, installation and connections are made easier because the FDM121 or FDM128 may be installed:

> via a direct cut-out in a plain door
> on the front of a W600 enclosure for one or four 96 x 96 devices on partial door cut-out.

PB105112.eps

A new front plate

The front of ComPacT NSX circuit breakers has an eye-pleasing curved profile, making PrismaSeT switchboards even more attrAssets of PrismaSeT switchboards. PrismaSeT front plates are designed for all types of controls (toggle, motor mechanism, rotary handle).



Presentation

To ensure the supply of energy at all times, certain electrical installations are connected to two sources:

> normal source S1
> replacement source S2 which steps in to supply the installation if the normal source is not available.

A mechanical and/or electrical interlocking system between two ComPacT switch-disconnectors or circuit breakers (or a mixture) avoids simultaneous connection of the two sources during switching.

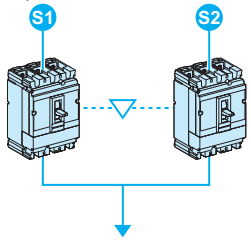
In PrismaSeT G, a manual changeover with mechanical interlocking of devices may be installed.

This is the simplest system. A human operator is required and consequently, the transfer from the normal source to the replacement source is delayed.

A manual source-changeover system comprises two or three manually controlled devices (circuit breakers or switch-disconnectors) that are mechanically interlocked.

The interlocking system avoids simultaneous connection (even transient) of the two sources.

DD385519.eps



For more information on the communication functions of ComPacT NSX, see the ULP system user manual, ref. TRV99100, and the ComPacT NSX catalog, ref. LVPED208001_EN.
See catalog "ComPacT, MasterPacT source changeover systems", ref. LVPED21122EN

Presentation of FuPacT fusegear for PrismaSeT G

Presentation

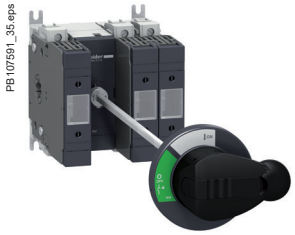
Whatever the switchboard configuration, PrismaSeT range offers tested and certified solution guaranteeing the safety of life and properties.

2 families of FuPacT fusegears

FuPacT GS

FuPacT GS ensures your power application for:
> distribution switchboards
> disconnection, isolation, locking and primary control of incoming circuits
> emergency stop,
> motor feeders (protect motors against single-phasing).

FuPacT fusegears have a test position for greater flexibility, easy to use.



FuPacT ISFT

FuPacT ISFT fuse-switch disconnectors are particularly suited for:
> secondary distribution circuits
> powering and control of industrial motors as local isolation device.

Installation

> FuPacT fusegears have dedicated mounting plates and front plates.
> The upstream and downstream connections are made by the panelbuilder.
> Vertical mounting allows to install several FuPacT fusegears.

Positioning and mounting of the devices in the switchboard and filling rate of it take into account temperature rise, withstand short-circuit capacities, isolation clearances.

B

Presentation

Get more out of your electrical panels with robust and ergonomic pushbuttons, switches.

Metal_Green-010-CMJN.psd

Robust performance that can withstand even the most severe environments.

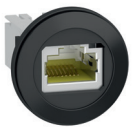
A touch of style electrical panels and machines.

Modern design for customizing new and existing enclosures to meet the requirements of customers.

New offers, taking smart panels to the next level.

The new USB and RJ45 ports offer you a simple, effective way to connect a PC or USB memory device right to the front plate of your machine enclosure to:

> Export data
> Update the PLC and HMI program
> No need to open the door:
  - Eliminate electrical hazards
  - Keep dust out of the enclosure



XB5_633_CPSCT16028A.eps

XB5_633_CPSCT16027B.eps

Standards

Harmony metal accessories for robust performance in all situations

From severe environments and potentially-explosive atmospheres, to extremely hot or cold temperatures, you can count on Harmony.

> Compliance with international standards (IEC, UL, CSA, CCC, EAC, JIS)
> Marine certified (BV, RINA, LROS, DNV, GL)
> Sealing effectiveness rated (IP66, IP67, IP69, IP69K, Type 4X)
> Operating temperature range of -40 °C
> to +70 °C
> High impact resistance: up to IK06
> High vibration resistance: shake-proof connector screws
> Standard and low-load, high-power electrical contact

Installation

The Harmony range for faster, simpler installation

Designed for efficiency that helps keep costs down.

> Can be mounted with a single hand
> Fastens with a single anti-rotation locking screw
> Accessories compatible with the entire Harmony diameter 22 mm range

Smart Panels:
Powerful technologies, easy to implement

In addition to basic functions and enclosures, the Smart Panel solution is enhanced with new features for collecting and transmitting energy data from the main switchboard panel and all subpanels, making it a highly flexible and accurate energy management system. All the panels, from main, division to tertiary, are smart panels with data gathering and transmission functions).

Smart Panel solution

The Smart Panel solution automates energy usage data collection to eliminate time-consuming and error-prone manual meter reading. Automatic metering at the source lets you see exactly how and where the building is using energy. It also performs intelligent cross references of energy usage:
- by zones (offices, lobby, storage, parking, etc.)
- with usage by type (lighting, heating, hot water for sanitation, etc.).

Metering and monitoring form the basis of the Smart Panel solution.

Energy management has never been simpler

1. Measure
Embedded and stand alone metering & control capabilities

2. Connect
> Integrated communication interfaces
> Ready to connect to energy management platforms

3. Act
> Data-driven energy efficiency actions
> Real time monitoring and control
> Access to energy and site information through on-line services

Switchboards are the most convenient location to collect data about electrical supplies troughout the building.

Schneider Electric provides best-in-class devices for electrical protection, control, and measurement, as well as efficient switchboard build-up systems.
We offer new digital possibilities through better connectivity, thanks to the enerlin'X system components embedded in our power operating devices.

Connecting is easy with Smart Panels.

Ethernet is today the most widespeed communication protocol in professional building, providing fast data transmission.
Thanks to the Enerlin'X digital system, switchboards can be connected via Ethernet like any other device through an RJ45 socket.

The design of Enerlin'X:
> grouping of similar functions in the smart components (e.g. Acti 9 Smartlink)
> error-free cabling, fast connection-disconnection
> space-savings in the enclosure.

Schneider Electric serves the needs of any building, regardless of size and criticality, and helps find savings opportunities.

Our solutions provide different mixes of energy, network, and asset management features tailored to each size. Clear visibility of the energy supply system and consumption is provided by locally installed software while online services offer improved mobility and convenience.

1.Measure

Power supply and protection monitoring, metering

ComPacT circuit breakers and switches

They offer reliable protection as well as support energy management by providing energy consumption date, equipment status, and operational support information.

Acti 9 circuit breakers, residual current devices, surge arresters

Each Acti 9 protection devices contributes to electrical supply reliability. Easy-to-fit auxiliaries transmit real-time status to the Enerlin'X system and additional RCA modules enable digitally controlled resetting after a trip.

Circuit and load control

Acti 9 contactors and impulse relays, remote controlled ComPacT

To improve user comfort, lighting or other loads are switched on and off, separately or all together via the digital system.

PowerLogics meter

monitor key distribution points 24 hours a day, from generators, substations, and services entrances, to main feeders and loads. Help improve network reliability by tracking real-time power quality equipment status, tranding loads, and logging events and alarms.

Modular energy meters

Basic kWh meter for elementary applications to MID-compliant meters for billing applications, and advanced energy meters capable of measuring a variety of electrical parameters.

2. Connect

Acti 9 Smartlink

> Digital interface for Acti 9 or third-party devices.
> Modular rail clippable, no extra space required; 100 % prefabricated connections.
> 2 versions: Modbus SL slave or Ethernet + Modbus SL.
> Automatic e-mail sent upon critical events (configurable).
> Embedded web pages for energy monitoring & control master.

Com'X 200 energy data logger

> Collects data from electrical and other devices troughout the building.
> Delivers batches of data ready to be processed by StruxureWare™ solutions and online services.

Enerlin'X I/O

Provides tailored additional functions.

Enerlin'X IFM

Modbus connection and data collection for one ComPacT device.

Com'X 510 energy server

> Collects data from electrical and other devices throughout the building.
> Provides detailed and global views of energy consumption as soon as as connected, with data accessible via web browser.

Enerlin'X IFE

> Ethernet communication interface for power circuit breakers
> Embedded web pages for energy control, and maintenance
> Modbus master, with automatic detection and configuration of "slave" devices
> Automatic e-mail sent upon critical events (configurable)

3. Act

Enerlin'X FDM121

> Access to switchgear settings, status, and measurements.
> Auto discovery of Modbus SL connectedd devices.

Com'X 510 web pages

All-in-one energy management for small and medium buildings, allowing you to detect the most important opportunities for savings.

> Provides dashboards and historical trend charts for consumption, viewable via web browser.
> Connection to network via WiFi or Ethernet.
> Aggregates electrical data with gas, steam, air, water.

Powerview

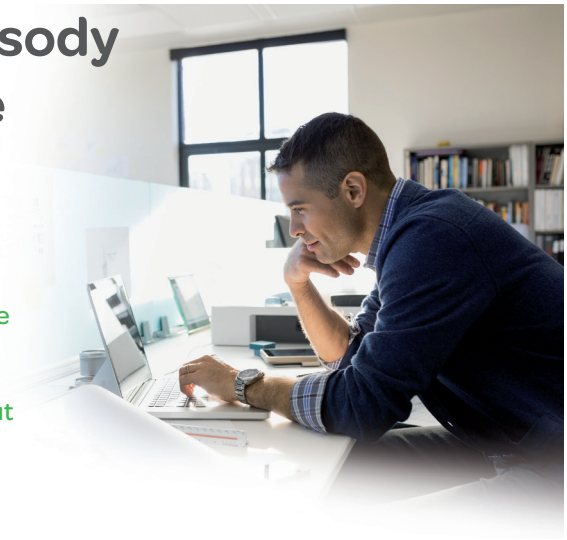
User-friendly web pages

User-friendly displays of all datas stored in enerlin'X devices, accessible via Ethernet and viewable with web browsers. includes user-configurable e-mail notification feature.

Remote access

Powerview webpages accessible anytime anywhere through secure, private internet access. User-configurable e-mail notification feature also included.

Easy design with Rapsody software

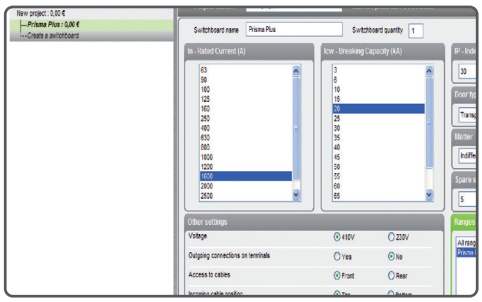


A time-saver in the design and quotation phases.

More flexibility since modifications and upgrades are possible throughout the project.

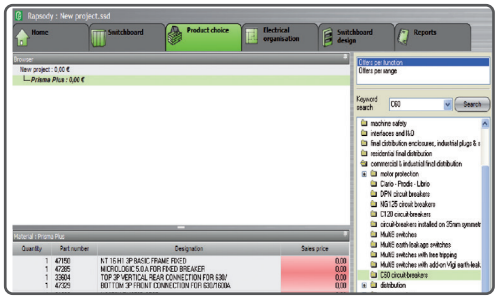
5 easy steps to design a switchboard

1



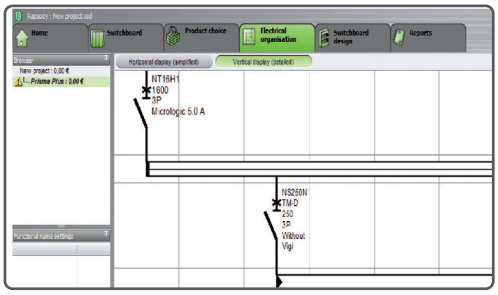
Define the switchboard's electrical and environmental characteristics, in a few clicks.

2



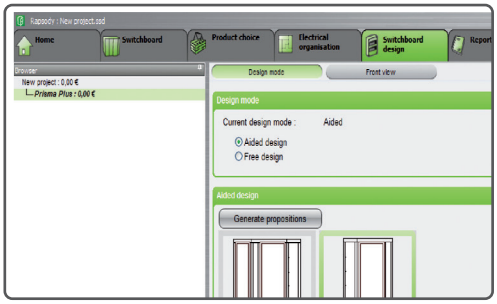
Choose and configure
the devices to be installed, with no risk of error.

3



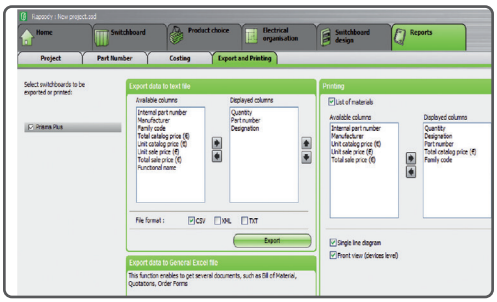
Customise, and easily modify the single-line diagram. **Move or duplicate** devices. **Generate** current distribution and connection systems.

4



Choose the switchboard and let the software set up the enclosure.
A list of mounting and connection accessories is proposed to make mounting work easier.

5



Automatically **export** the information required to make a clear, comprehensive and professional quotation.

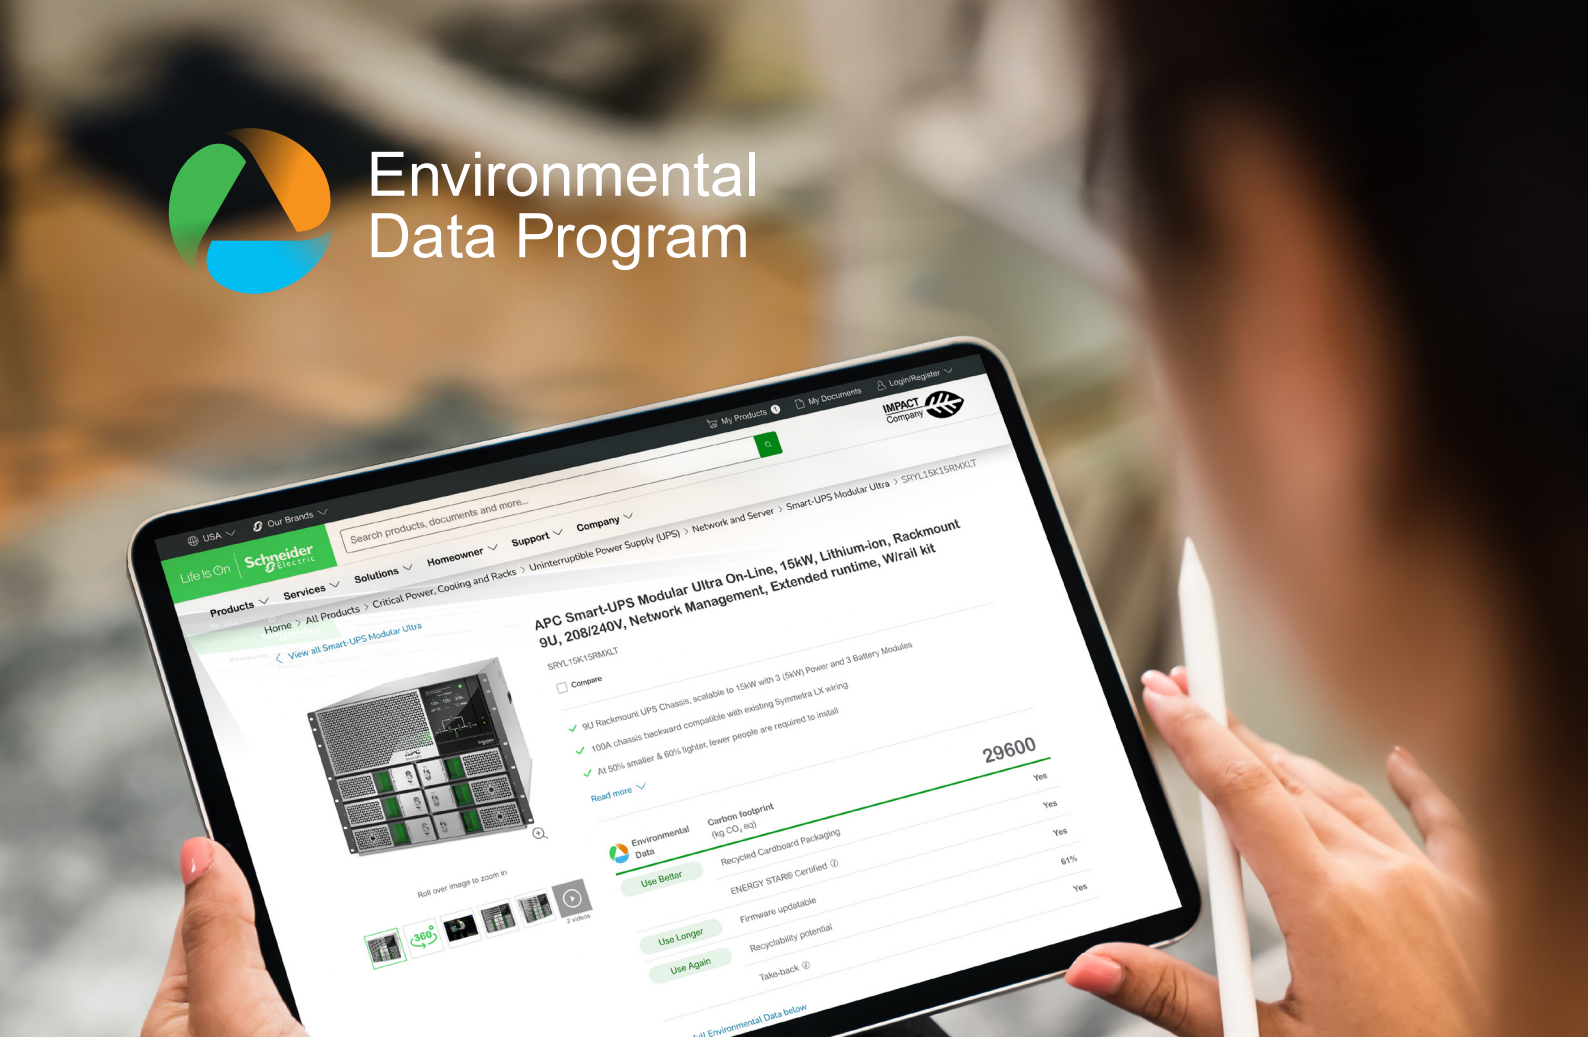
Environmental Data Program

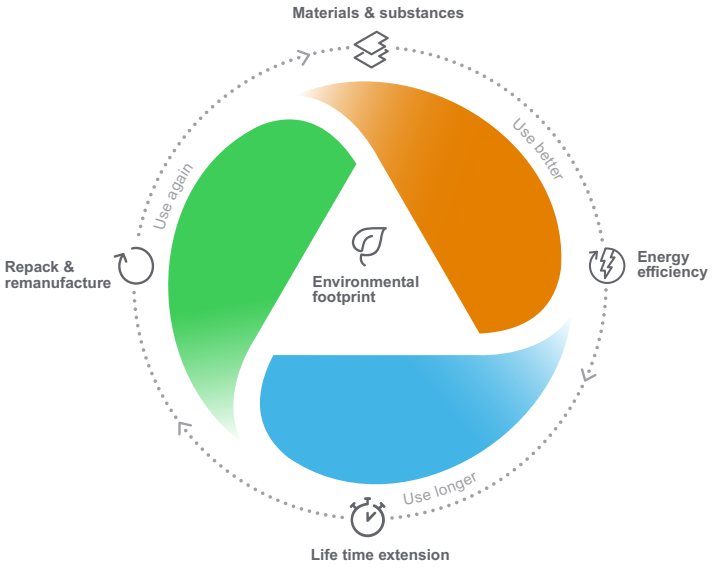


Next-level transparency for better-informed product choices

The Environmental Data Program is a framework for how we measure, categorize, and compare the environmental attributes and footprint of our products.

Using a rigorous, fact-based methodology, the program provides environmental data from across the product lifecycle.

Five data categories across the product lifecycle



Use Better: How sustainable a product is, including environmental footprint, materials and substances, packaging, and energy efficiency.

Use Longer: How a product's life time can be effectively extended in terms of repairability and updatability.

Use Again: How a product can be reused, from dismantling and remanufacturing to recyclability and manufacturer take back.

With this transparent, verified data, customers and partners are empowered to make conscious environmental choices and accurately evaluate and report on sustainability performance.

All our hardware offers have an associated environmental data available on se.com product pages.

Lighting

	W600 fixed lighting	Switchboard portable lamp
		Catalog number	**LVS08964**	**LVS08965**
Presentation	This system is generally used to illuminate the front of a switchboard.	■ Lamp with a magnetic base for installation behind a door or directly on the cubicle framework. ■ Supplied without a power cord ■ H x W x D: 90 x 345 x 42
Characteristics	■ Supply voltage: 220/240 V ■ Power rating: 8 W ■ Height: 1 module vertical (50 mm)	■ Supply voltage: 220/240 V ■ Power rating: 11 W ■ Lamp: picoline OSRAM 8W (supplied) ■ Class 2 ■ IP20

(1) RH10, RH21, RH99, RMH relay and RM12T Multiplexer.
(2) IM9, IM9-0L, IM20, IM20H.
(3) For installation at the top or bottom of the enclosure, use a 3-modules modular front plate (**LVS03203**).
(4) 2/3 transparent front plate.

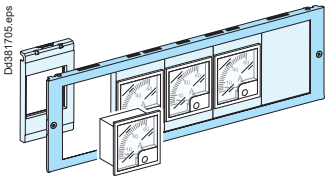
(1) TeSys U without communication module, neither auxiliary contact, neither inverter module.
(2) If the communication module is installed, the transparent front plate is mandatory. If not, the 2 front plates can be replaced by one plain front plate (cat.no LVS**03805**) in wall-mounted or floor-standing enclosure, LVS**03815** in duct).
(3) Or plain front plate (cat.no LVS**03804** in wall-mounted or floor-standing enclosure, LVS**03814** in duct).

Other devices

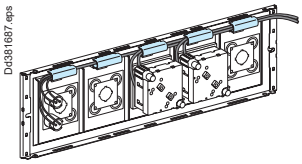
2 types of device mounting 72 x 72 and 96 x 96

1

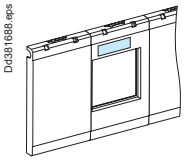
> On an interface with plastic mounting plates clipped onto the metal front plate with cut-outs



- The interface is made up of a metal front plate and plastic mounting plates that clip onto the front plate.
- The devices are attached in the cut-outs of the plastic mounting plates and insulated from the front plate.



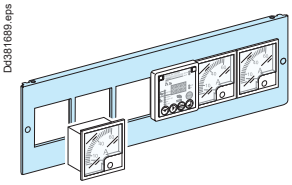
- A system at the rear of the mounting plates guides the wires.



- Each mounting plate can receive an adhesive label.
- Plain mounting plates are available to blank off any unused locations.

2

> Directly on a metal front plate with cut-outs

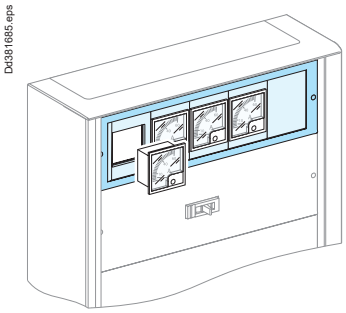


- Devices are attached directly to the metal front plate.
- Blanking plates are available to blank off any unused locations.

2 mounting types in PrismaSeT G

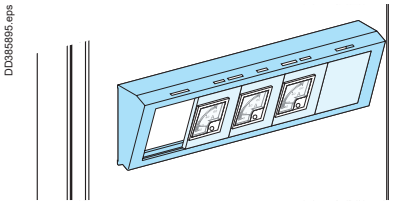
1

> In the device zone of wall-mounted and floor-standing enclosures



2

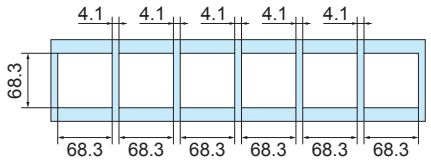
> On a plain door with cut-outs, on an inclined visor by 30°



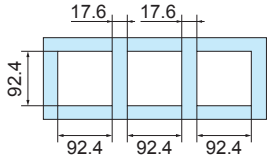
- With cut-out plastic mounting plate directly clipped on the visor.
- Supplied with a drilling diagram for mounting on a plain door.

Precut dimensions

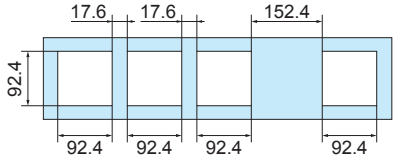
- Cat. number **LVS03910**



- Cat. number **LVS03911**



- Cat. number **LVS03925**



Note: device mounting on door: earthing braid (ref. LVS08910) or earthing wire (ref. **LVS08911**).

Accessories

Support plate and dedicated mounting plate, in device compartment

This mounting assembly is used to easily install and connect a large number of terminal blocks in a minimum amount of space. It is particularly useful when a duct is not warranted or cannot be installed.

Used for	On mounting plate for terminal block and Linergy TB earth bar	Used for	In device compartment
			Number of vertical modules	-		5 (250 mm)
Catalog number	**LVS04220**		**LVS04223**
Characteristics	■ A mounting plate made up of two supports, is equipped with: □ a 1600 mm modular rail (LVS04226) for terminal blocks □ Linergy TB earth bar *> page D-22* ■ The supports have cut-outs that can be used to easily tie down the connection wires.		■ Mounting brackets, fixed to the functional uprights at the top or bottom of the enclosure, is equipped with four 200 mm symetrical rails. They are installed vertically to facilitate cable running. ■ To facilitate mixing of different size terminal blocks and ensure convenient connections from the front or the side, the distance between rails and the depth of each rail can be adjusted. ■ The assembly has cut-outs that can be used to easily tie down the connection wires. ■ Linergy TB earth bars and Linergy TR terminal blocks layout, supplied separately, can be installed between the rows of terminal blocks to form different configurations, e.g.: □ four sets of terminal blocks □ 3 sets of terminal blocks + one or two Linergy TB earth bars (W = 290 mm). *> page D-22*

Installation on the side or in the width of the enclosure

This solution saves considerable space in the device zone and avoids the need for the 300 mm wide duct.

Fixing mode	2 fixing brackets for the earth bar on the functional uprights			Horizontally on brackets

Partitioning in PrismaSeT G IP30 and IP55 Horizontal and Vertical system

Partitioning of functional units

Horizontal partitioning

The metal partitions are used to:
- separate the functional units from one to another
- create a physical separation between devices and a terminal block, for example.

Used for	W600	W850	W300
IP30 **IP55**			Catalog numbers	**LVS04331**	**LVS04336**	**LVS04332**
Characteristics	Metal. It is mounted directly on the functional uprights. Lateral and rear cut-outs are available for cable running or the installation of busbars at the rear of the switchboard.		

Vertical partitioning

The metal partition creates a physical separation between the device compartment and a wide duct, or enclosure.

It is used to:
- separate the devices from busbars or a distribution block installed in the duct,
- set up a special zone for terminal blocks in the duct.

Used for	From 6 to 33 modules	36 modules
IP30		Cat. no.	**LVS04330**	**LVS04335**
Description	Can be used for partitioning up to 33-modules. It can be cut to length every 150 mm.	Can be used for partitioning in 36-module floor standing enclosure.

Used for	From 7 to 33 modules
IP55	Cat. no.	**LVS08384**
Description	Metal. There are cut -outs for cable running. Quantity to order according to height.

	Nb. of vertical modules	7	11	15	19	23	27	33	
	Height (mm)	450	650	850	1050	1250	1450	1750

Insulated flexible bars

The insulated flexible bars are tested in a type-tested switchboard environment. Their design takes into account the switchboard architecture where they are often in close proximity to a protection device (circuit breaker or fuse) with significant heat losses. The sizes for the flexible bars indicated below take into account the heat losses of Schneider Electric devices in a Prisma**SeT** switchboard.

Characteristics

Length	1800 mm
Rated insulation voltage (Ui)	1000 V

Connection between device busbar

The flexible bars are determined taking into account the connected device, whatever the internal temperature of the switchboard.
The bar sizes indicated below take into account the derating curves of devices.

Devices	Size (mm)	Catalog numbers

(1) To connect a ComPacT NSX250 to Linergy BW busbars, use a 24 x 5 mm flexible bar (LVS**04746**).

Connection between busbars

Flexible bars are designed for connections between busbars taking into account the following characteristics:

- a maximum temperature of 60 °C inside the switchboard. This corresponds to the average temperature inside a switchboard for an ambient temperature of 35 °C
- the maximum withstand temperature for the insulating material is 125 °C.

Characteristics	Set of 12	Set of 2 x 1 m	Set of 12 Have the same capacity as 60 x 30 mm trunking	Set of 4 covers of 430 mm
Used	Prisma**SeT** G wall-mounted and floor-standing enclosures		Prisma**SeT** G wall-mounted and floor-standing enclosures + Pack enclosures	Prisma**SeT** G wall-mounted and floor-standing enclosures + Pack enclosures

Cable-tie supports

Used for	Cable-tie supports for wall-mounted or floor-standing enclosures	Cable-tie supports in a duct	C-shaped cable-tie supports for wall-mounted or floor-standing enclosures and ducts	Cable-tie support adapters
				Catalog numbers	**LVS08867**	**LVS08868**	**LVS08783**	**LVS08866**
Characteristics	■ Set of 2 ■ Supplied with hardware for mounting on the functional uprights of the enclosure.	■ Set of 4 ■ Supplied with hardware for mounting on the functional uprights of the duct.	■ W = 1600 mm, can be cut to length as needed. ■ Cables secured by ties or cable clamps. ■ Supplied with hardware for mounting on the functional uprights of the enclosure or duct.	■ Set of 2 ■ Makes it possible to tie down the cables next to the gland plate and gain one module in height. ■ Only for use in 33- and 36-module enclosures.

Note: for the connection of power cables, see *page G-9*.

Ventilation

In most cases and notably for IP30 switchboards, the heat dissipation by convection takes place naturally and does not require fans.
However, when the switchboard is installed in temperate environments or when the degree of protection is high (IP54), ventilation accessories are indispensable.

For more in-depth information on selecting air-conditioning accessories and the thermal management of switchboards > *page G-26*.

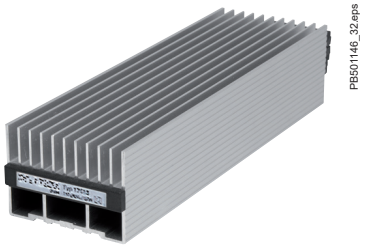
Fine filters G3 M1	**NSYCAF125T**	**NSYCAF223T**

Heating elements

The resistors prevent condensation, corrosion and superficial leakage currents.
They maintain a positive temperature in the enclosures when external temperatures drop very low.
Install heaters according to the desired power level at the bottom of the enclosure, respect a safety area of a least 10 cm around the device.
Vertical installation is recommended to ensure optimum convection.
The resistance heaters are equipped with a PTC - type sensor (positive temperature coefficient). Thanks to these heaters, the surface temperature stabilises at 75 °C when the ambient is at -5 °C.

Heating resistor



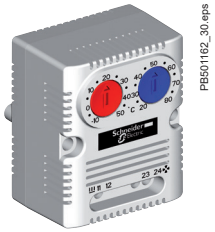
Catalog numbers	NSYCR55WU2	NSYCR100WU2	NSYCR250W230VV
Power rating	55 W	90 W	250 W
Characteristics	■ Vertical mounting. ■ Aluminium case with fins. ■ Temperature: □ turns off at 60 °C, □ turns on at 25-30 °C (temperature of the resistor itself). ■ Equipped with a symetrical rail for rapid mounting (clips on). ■ Input voltage: 110-250 V.		■ Vertical mounting. ■ Aluminium case with fins. ■ Temperature: □ turns off at 60 °C, □ turns on at 25-30 °C (temperature of the resistor itself). ■ Equipped with a symetrical rail for rapid mounting (clips on). ■ Input voltage: 230 V.

Regulating

Used to control the temperature inside electrical switchboards in conjunction with heating resistors and fans.
This thermostat can control the activation of a fan and a heater and regulate their temperature independently.

Double adjustable thermostat
Double temperature control with a resistance heater and a fan with separate operation
■ Red button: with normally closed contact (NC) for controlling the resistance heaters.
■ Blue button: with normally open contact (NO) for controlling the fans, signalling systems or alarms.

Thermostat



Catalog number	NSYCCOTHD
Characteristics	■ Setting range: 0 °C to +60 °C. ■ Power rating: 30 W ■ Input voltage: 120 V AC: 15 A - 230 V AC: 10 A ■ Fixing: clips onto a modular rail.

Linergy Distribution and Connection Systems

Contents

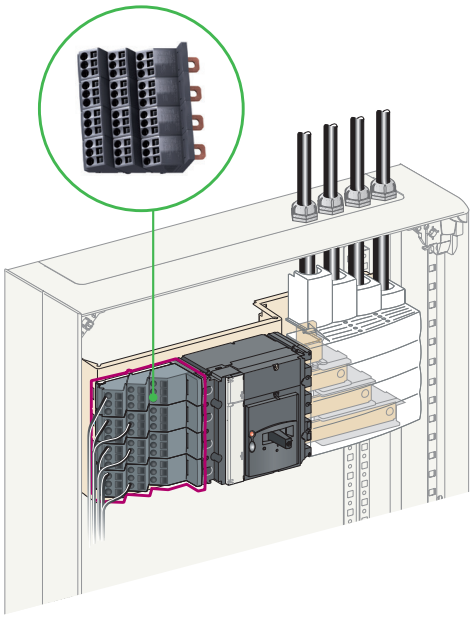
D

Distribution and connection

Linergy and PrismaSeT G: an optimised and high-performance type-tested offer (IEC 61439-1 and 2 standard)

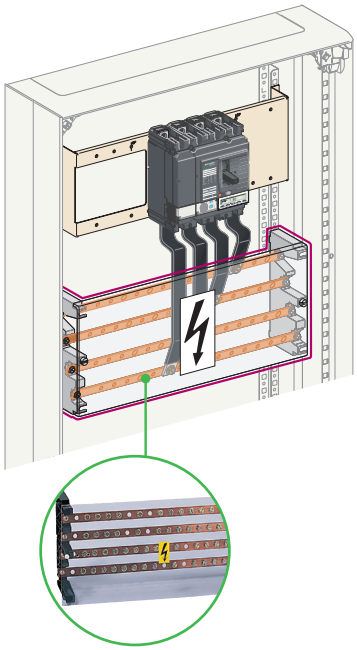
> For incoming devices

Linergy DX 160 A and Linergy DP upto 250 A distribution block



- Reliable spring-terminal connections for outgoing circuits, requiring no maintenance
- Horizontal or vertiical installation in minimum space

Linergy BS 160 to 630 A distribution block

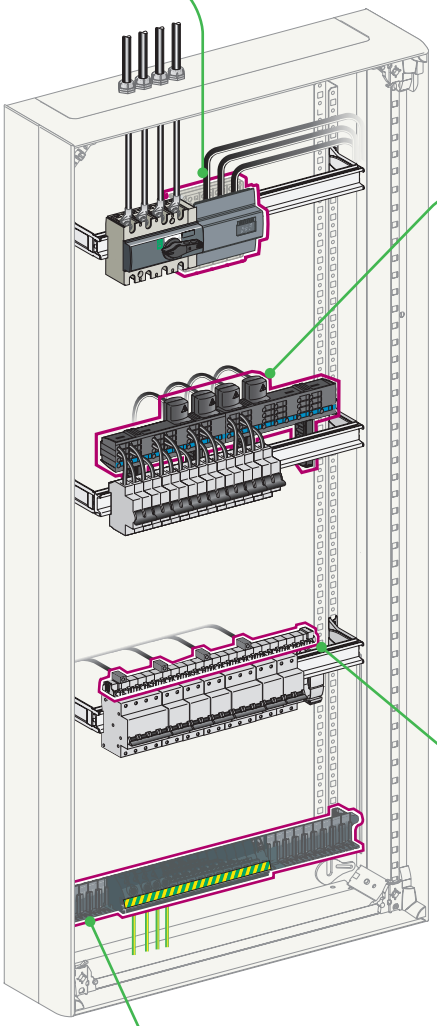


- Traditional, highly polyvalent solution
- Many installation possibilities

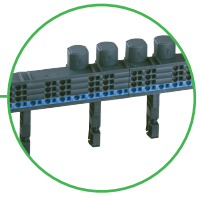
> For rows of modular devices

Linergy DX 125 at 160 A distribution block

- Spring terminals for electrical connections that stay tight
- Front designed to integrate perfectly with modular devices

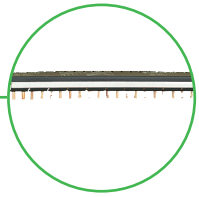


Linergy FM 63/200 A



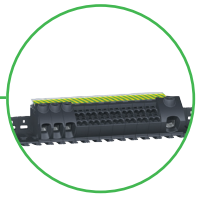
- Reliable spring-terminal connections requiring no maintenance
- Fast installation
- Easy upgrades through replacement or addition of devices
- Easy balancing of phases

Linergy FH 100 to 125 A comb busbars



- Fast and direct connections, adaptable to all needs
- Easy, economical connections

Linergy TR



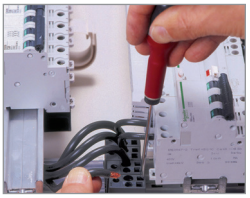
- Fast and simple installation
- Multiple connection options (screw, spring or push-in connections)

Distribution and connection

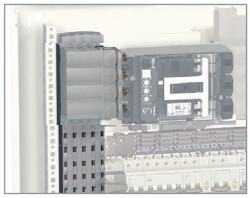
Customised organisation of your switchboard

> Busbars up to 630 A for all switchboard architectures

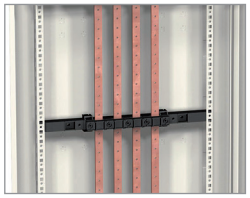
Linergy BW busbars:
comPacT and insulated for fast upgrades.



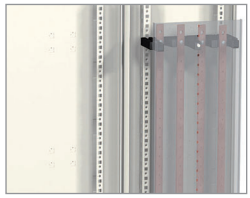
Prefabricated connections, optimised and fully insulated.



Linergy BS busbars:
for traditional distribution.



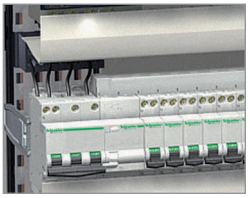
Rear Linergy BS busbars.



Lateral busbars. The bars are staggered for easy access to connection points.

> Row distribution blocks for modular devices

Linergy FH comb busbars:
a simple, cost-effective solution.

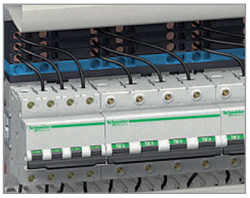


Linergy FH comb busbars.

Linergy FH comb busbars are fully insulated.
Device can de connected in a single operation.

Linergy FM device feeder:
a fast, flexible and reliable solution.

Linergy FM device feeder 80 A.



Linergy FM device feeder 200 A.

The Linergy FM device feeder snaps easily onto the back of the rails.
All types of modular devices can be mixed in the same row and phase balancing is simple. It's easy to change or add devices.

> Centralised distribution blocks for switchboard incomers

Linergy DX 160 A 4P: practical and aesthetic.

Modular monobloc distribution block for fast connections

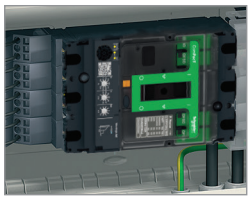
Linergy DX 160 A 1P: "Quick" distribution block.

Modular combinable components for fast connections.

Linergy DS 160 A: a traditional solution.

Installation on modular rail on mounting-plate.
Screw-terminal connections.

Linergy DP 160 A: modular and comPacT.

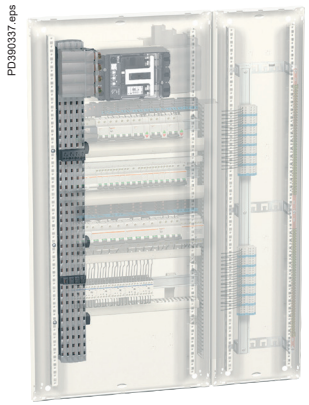


Linergy DP 250 A: modular and comPacT.

Installed directly downstream of ComPacT circuit breakers and switches without taking up any extra vertical modules. Fast connections in spring-loaded terminals.

Linergy BW
Insulated busbars

Power busbars up to 630 A



Description

- ComPacT busbar, **IPxxB**, ready for installation (supplied complete with supports and end caps)
- Shaped busbar, threaded M6 with 25-mm pitch, can be cut with 200-mm pitch (150 mm for the 125 A)
- Busbar installed on insulating supports, screwed onto the rear uprights
- Wide selection of tested pre-wired connectors
- Clip-on covers to protect against direct contact (IPxxB). Can easily be cut to allow connections to pass through to the switchgear
- Ends protected by end caps

Linergy BW (160 to 630 A) is fully compatible with seismic constraints. Just add a seismic kit (LVS**04130**) to Linergy BW 160/250/400.

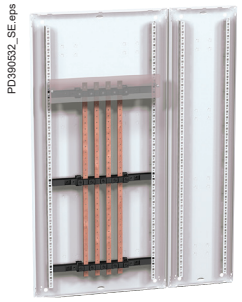
Linergy BS
Rear flat busbars

Power busbars up to 630 A



IEC 61439-1 and 2

Description

The busbar can be 3-pole or 4-pole with ratings between 160 A and 630 A.
2 lengths are available: 1000 and 1400 mm, which can be cut as required.
The number of supports depends on the installation maximum rated current.
The supports allow installation of a 5th bar with 15 or 20 x 5 mm cross-section to create the earth collector.

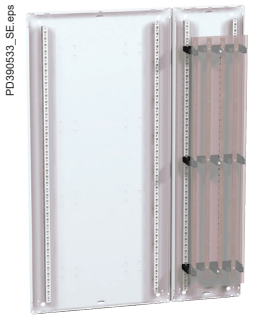
(1) Linergy FM 200 A distribution blocks with connections ref. LVS**04029** can act as intermediate supports (max. distance apart 200 mm) in addition to the support ref. LVS**04191** at the top and bottom.

Linergy BS
Multi-stage busbars

Power busbars up to 630 A



IEC 61439-1 and 2

Description

Multi-stage busbars are installed in a duct W = 300 mm.
It could be interesting to install it in a duct between 2 enclosures for dividing the current.
All the connection points are easily accessible from the front.
The busbar orientation makes them easier to tighten and facilitates running the cables between them.
The current can be 3-pole or 4-pole with ratings between 160 A and 630 A.
2 lengths are available: 1000 and 1400 mm, which can be cut as required.
The number of supports depends on the installation maximum rated current.

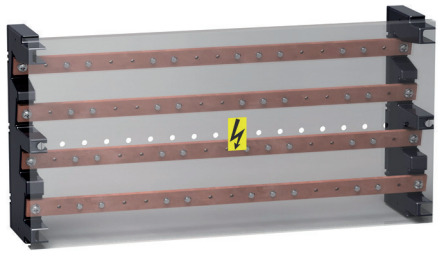
Multi-stage distribution blocks

Power busbars up to 630 A



IEC 61439-1 and 2

Description

The multi-stage distribution block can be installed horizontally in the device zone or vertically in the 300 mm wide duct of enclosures and cubicles.
The distribution block is made up of:
- two staggered supports made of an insulating material
- four slanted copper bars with holes every 25 mm.

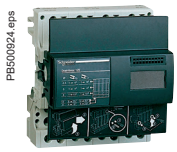
Distribution blocks



IEC 60947-7-1, IEC 61439-2

Description

- Downstream circuits are connected from the front, to spring terminals.
- Contact pressure automatically adapts to the size of the conductor.
- Contacts are insensitive to vibrations and thermal variations.
- Only one cable (flexible or rigid) can be inserted per terminal.

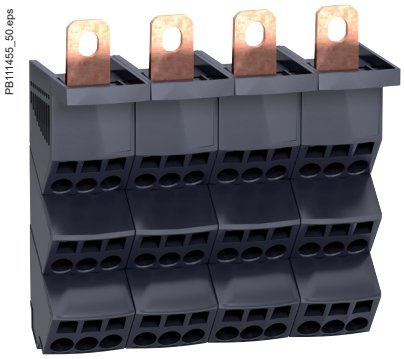
Quick distribution blocks - ComPacT NSX and INS-INV up to 250 A



IEC 60947-7-1, IEC 61439-1 and 2

Description

- The Linergy DP quick distribution block is designed for installation directly downstream of ComPacT NSX and INS-INV up to 250 A. It can also be clipped onto a modular rail.

Avantages

- It is quick to mount in the horizontal position. Electrical connections are made directly to the device terminals.
- It is the same width as the devices and does not take up any additional space in the switchboard.
- The connection terminals are slanted to facilitate cable entry and avoid exceeding the bending radius of the flexible and rigid cables.

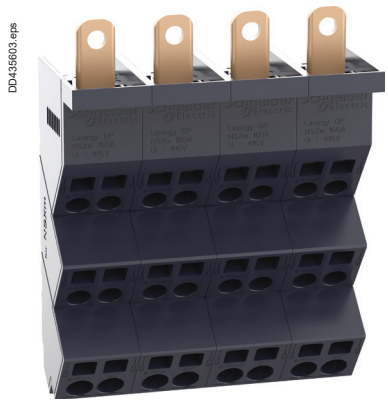
Linergy DP

Quick distribution blocks - ComPacT NSXm up to 160 A



IEC 60947-7-1, IEC 61439-1 and 2

Description

- The Linergy DP quick distribution block is designed for installation directly downstream of ComPacT NSXm up to 160 A. It can also be clipped onto a modular rail.

Avantages

- It is quick to mount in the horizontal position. Electrical connections are made directly to the device terminals.
- It is the same width as the devices and does not take up any additional space in the switchboard.
- The connection terminals are slanted to facilitate cable entry and avoid exceeding the bending radius of the flexible and rigid cables.

Linergy DS
Screw distribution blocks

IEC/EN 60947-7-1, IEC/EN 61439-1 and 2

Description

- Single-pole or four-pole distribution block that can be installed on a standard DIN rail or on a mounting plate.
- Compatible with PrismaSeT G and P, Pragma, Mini Pragma and Resbo series switchboards.
- Incomers and feeders are connected to screw terminals that accept rigid or flexible cables with ferrule.
- Optional: additional neutral terminal strip for four-pole distribution block.

Avantages

- Simplified power supply for main incomers.
- Easy phase balancing.
- Easy, effortless cabling due to excellent accessibility.
- Visible cabling.
- Insulation between phases.
- The single-pole distribution blocks are adjacent and bridgeable via the second incoming hole for parallel connection.

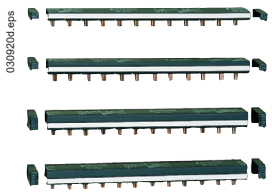
Horizontal comb busbar for 27 mm pitch for NG125



IEC 60664-1

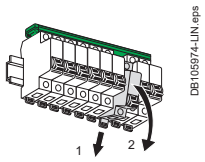
Description

Comb busbars make it easier to install NG125 circuit breakers.

- Supplied with 2 lateral end-caps, IP 2.
- Outgoing feeders can be marked.
- Cutting markings on the copper bars and the insulating material.

NG125	27 mm poles, cuttable			
Number of poles	**1P**	**2P**	**3P**	**4P**
				
	Each com busbar reference includes: ■ 1 x single or 2 pole comb busbar + 8 tooth-caps + 2 side plates ■ 1 x 3 or 4 pole comb busbar + 4 tooth-caps + 2 side plates To insulate teeth that have been left free can be insulated by tooth-caps			
Rated operational current at 40 °C (Ie)	125 A (63 A max by outgoer)			
Rated conditional short-circuit current of an assembly (Isc)	Compatible with the breaking capacity of NG125 circuit breakers			
Insulation voltage (Ui)	620 V AC			
Rated voltage (Ue)	500 V AC			
Fire resistance to IEC 695-2-1	Self-extinguishing 960 °C, 30 s			
Colour	RAL 7016 (anthracite grey)			
Use				
	Power supply by connector recommended			
Number of 27 mm modules	16	16	15	16
Set of	1			
Catalog numbers	**14811**	**14812**	**14813**	**14814**

Installation



Comb busbars allow dismountability (1-2)

Accessories

Number of poles	**1P, 2P, 3P, 4P**	
		
	Tooth covers	**Insulated connector**
		Compatible with all Schneider Electric comb busbars. Clip onto the comb busbar's insulating material, which gives them very great stability Receive clip-on markers allowing circuit identific
Use		
		For 25 mm² semi-rigid cable
Set of	20	4
Catalog numbers	**14818**	**14885**
Installation

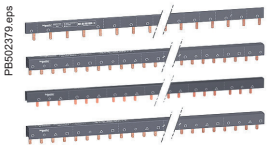
Horizontal comb busbar for 18 mm pitch for Acti 9



IEC 60947-7-1, IEC 61439-2

Description

Comb busbars make it easier to install Acti 9 circuit breaker.

- Can be sawn and cut in a single pass.
- Supplied with two IP20 lateral end-caps except for 57 module references.
- Cutting marks on the insulating material for easy adaptation.
- The phases are identified by symbols on each side of the comb busbar for installation in all positions.
- The special comb busbars for circuit breakers with 9 mm auxiliaries have a 9 mm gap for inserting iOF and iSD.

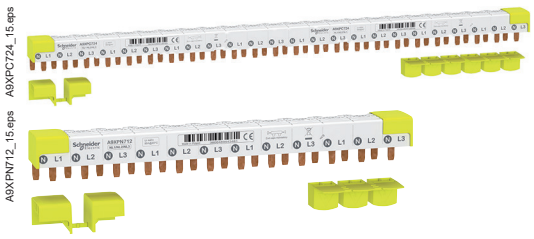
Horizontal comb busbar for 9 mm pitch for Acti 9, C60



IEC 61439-1

Description

Comb busbars ensure:
- Easy, reliable mounting of 1P+N and 3P+N, TL, CT, ID, V, BP and Cm switchgear: tooth positioning opposite the device terminals is ensured by indexing of copper parts.
- C60/ID Group Feeder comb busbars contain two different parts:
  - Connection of Group Feeder switchgear: C60 (3P+N) or ID (3P+N) circuit breaker in 18 mm modules, powered by cables, through the bottom, directly by the terminals.
  - Connection of Clario, Prodis and Librio switchgear in 9 mm modules.

Acti 9 Ph+N		9 mm poles, cuttable			
Number of poles		**1P+N**		**3P+N**

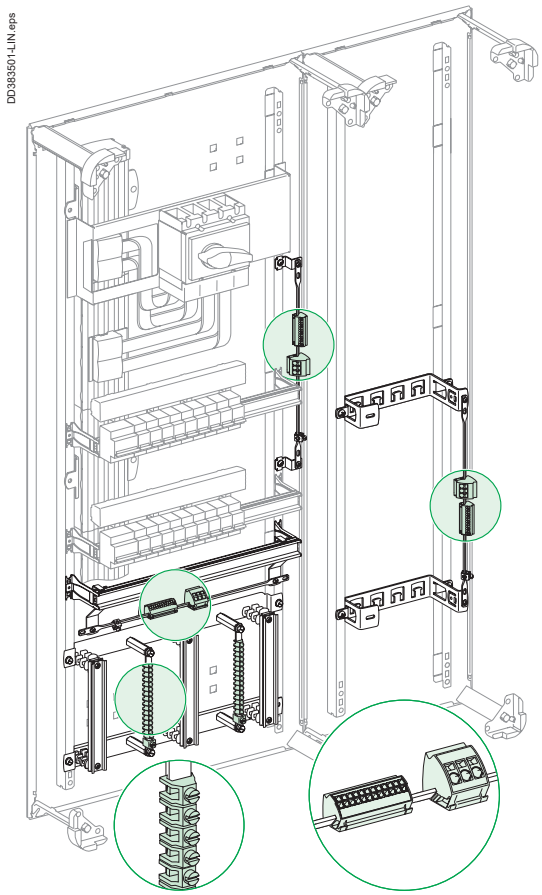
G



Description

This range of earth bars is installed:
- in the duct which can constitute a dedicated area, completely separate from the equipment
- or in the switchgear compartment, at the top or the bottom.

Fast-connecting earth bar

	Copper earth bar
Cross-section (mm)	12 x 3
Effective length (mm)	330
Total length (mm)	450
Composition	Copper bar with 1 terminal 16 to 35 mm²
Rated short time withstand current (Icw)	9 kA rms/0.5 s
Catalog numbers	**LVS04201**

Accessories

	Earth blocks with terminals	
	Spring-fixing (clip onto the earth bar)	
Total connection capacity	12 x 4 mm²	3 x 16 mm²
Composition	4 earth blocks	4 earth blocks

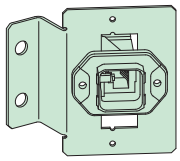
Terminal blocks and bars

Connectors

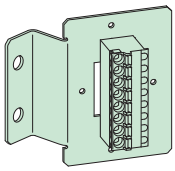
For plug & play interconnection between electrical switchboard for control and communication wires.

DD385854.ai



RJ45 female-female connector with mounting plate		
Connector type		8 wires RJ45; 1 Gbps
For ethernet cable		CAT5e SFTP (IEC 11801) or higher
Degree of protection		IP67 for direct mount
Dimensions (H x W x D)	(mm)	75 x 70 x 45
Catalog number		**LGY4230**

DD385855.ai

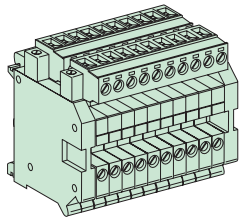


8P male-female connector with mounting plate		
Rated operational current at 40 °C	(Ie)	12 A
Rated operational voltage	(Ue)	320 V
Rated impulse withstand voltage	(Uimp)	4 kV
Connection method		Push-in spring connection
Connection capacity	Input	8
	Output	8
Dimensions (H x W x D)	(mm)	75 x 70 x 45
Wire size		0.2 to 2.5 mm²
Catalog number		**LGY4231**

Terminal block

For distributing auxiliary voltages in power and regulation equipment.

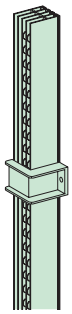
DB381644-LIN-30.eps



Terminal block for auxiliary wiring			
Standards		IEC	UL
Rated operational current at 40 °C	(Ie)	12 A	20 A
Rated operational voltage	(Ue)	250 V AC	300 V AC
Rated impulse withstand voltage	(Uimp)	4 kV	
Connection capacity	Input	10 (grey)	
	Output	2 x 10 (grey)	
Dimensions (H x W x D)	(mm)	61 x 48 x 45	
Wire size		0.2 to 2.5 mm²	
Tightening torque		0.5 to 0.6 N.m	
Composition		3.5 18-mm modules	
Catalog number		**LVS04228**	

Bus duct

DB406327.eps



Four-pole auxiliary bus duct		
		Duct for 4 conductors
		166 tap-off points with Faston connectors, per linear meter
Rated operational current at 40°	(Ie)	32 A
Rated insulation voltage	(Ui)	660 V AC
Width (mm)		1755
Composition		Supplied with 2 end clamps and 1 lateral clamp for mounting on cable-tie supports
Catalog number		**LVS04203**

XB5_633_CPSCT16028A_24.eps

ZBSP2_24.ai

For safe and upgradeable electrical switchboards

> 100 % reliable and in compliance with existing standards
All the components (switchgear, splitter blocks, prefabricated connections, etc.) have been designed to work together. All switchboard configurations have been tested.

> Optimised, upgradeable installation
With Prisma**SeT** G, you can build the right switchboard for your customer, sized precisely to fit costs and needs.
Thanks to the organisation around functional units, the installation evolves simply while preserving its original performance.

> Ease of setup
The complete accessibility of all mounting and connection points facilitates assembly and cabling in the workshop. The functional units are clearly identified: operations are intuitive and reliable, and connection and checking are performed naturally.

> Safety of people and property
> Continuity of service
> Optimisation and upgradeability
> Ergonomics and complete accessibility
> Controlled costs (installation, maintenance) and delivery times
> Seismic characteristics: 2,5G without accessory

Presentation

Up to 630 A

Metallic indoor enclosures to compose.
Commercial buildings: hotels, offices, shops, etc.
Industry: technical room, etc.

Enclosure delivered flat in kit form: total accessibility
Designed for electrical continuity

- **630 A**
- **IP30/IP4X**
- **IK07/08/10**
- **Seismic characteristics: 2,5G**

PB115630_39.eps

Description

Steel sheet metal with electrophoresis treatment + hot-polymerised polyester epoxy powder.
Enclosure:

- width: 595 mm, 850 and 305 mm
- height: 385 to 2030mm
- depth: 205 mm without door / 259 mm with door (including the handle : 13.5 mm)
- properties of metal enclosures *> page G-16.*

Main characteristics

PrismaSeT G IP30 - IP4X enclosures	
Rated operational current	I_n = 630 A - Isc = 50 kA, Icw = 25 kA rms / 1 s, Ipk = 53 kÂ
Colour	White colour RAL 9003
Standards conformity	EN 62208, IEC 61439-2
Degree of protection	IP30 without door, IP40 with door IP41 with canopy + door, IP43 with canopy + door + gasket
Degree of protection against mechanical impacts	IK07 without door IK08 with door (transparent) IK10 with plain door
Seismic characteristics	2,5G without accessory (IEC 60068-2-57)
Isolation	Class 1
Doors	■ Plain or transparent, opening to right or left, 130° ■ Earthed by design ■ Supplied with a handle and keylock (key 405) ■ Distance behind door = 58 mm (possibility of push-buttons, lamps installation). ■ 2 closing points on 15- to 24-module doors ■ 3 closing points on 27-, 30-, 33- and 36-module doors.
Mounting	Surface mounting, floor-standing, flush mounting via a kit *> page E-11*

Easy design with
Rapsody software
> page B-29

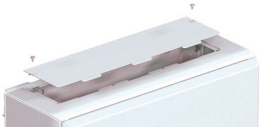
Presentation

Up to 630 A

3 widths available: 300/600/850

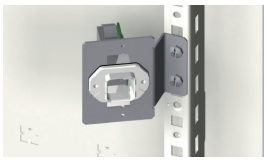
Lengthened rear upright to facilitate the fitting of accessories (cables tying) and installation of earth, neutral terminals, etc....

New removable gland plate for quick on-site connection of incoming cables.

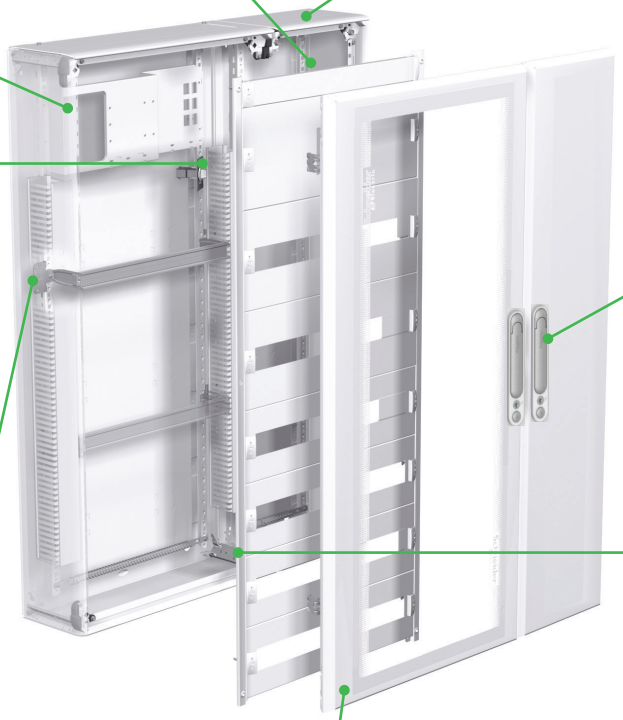


Hooks for quick plate pre-mounting

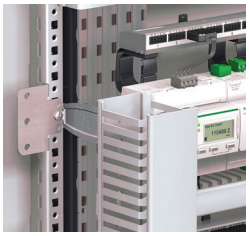
Plates for connecting control, command and communication circuits



Ergonomic handle



Trunking support plate, fixed at the same time as the modular rail

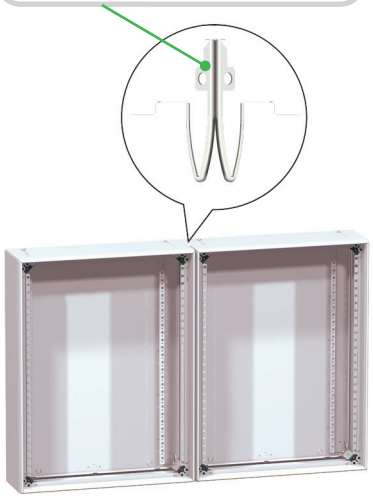


New pillar with natural positioning

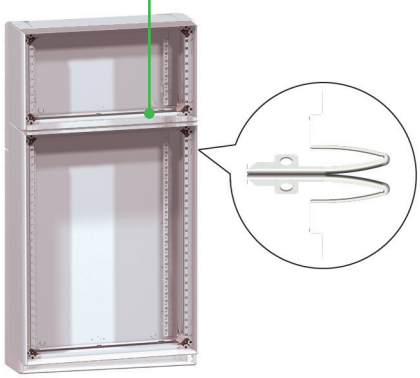
without door: IP30
with door: IP40
plain door: IK10
transparent door: IK08

Combination: old and new versions fully compatible

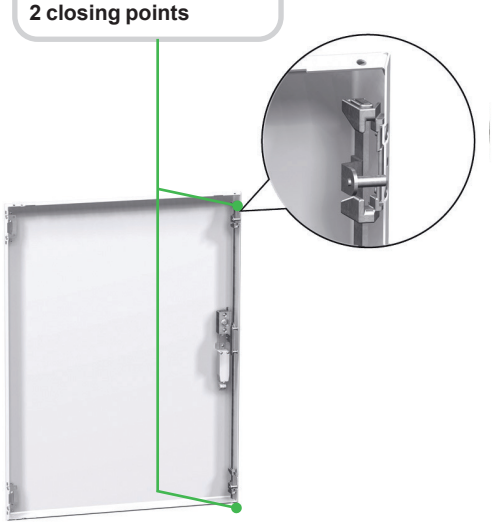
Assembly of 2 enclosures facilitated by creating extension enclosures, including all necessary assembly parts



Vertical combination of 2 enclosures: simplified by creating a dedicated horizontal combination strip



15M to 24M doors with 2 closing points



Up to 630 A

IP30, 630 A wall-mounted and floor-standing enclosures

Reversible doors (opening 130° to left or right), supplied equipped with a handle and keylock (key 405).
Equiped with a door the IP30 enclosure reaches IP4X.

- To create switchboard combinations (horizontal combination of enclosures of the same height), use a basic enclosure plus enclosure extensions, or W300 ducts.
- Enclosure extensions are supplied with a combination kit.
- In case of floor-standing enclosure combination, cables can be run on the sides of the plinth (diameter ≤ 140 mm).

Wall-mounted and floor-standing enclosures

Combination kits

Up to 630 A

Combinations

To make the combination more rigid, particularly during transport, it is mandatory to use a set of cross-members secured to the rear of the switchboard.
A combination kit is delivered with each duct and each enclosure extension.
It is sometime necessary to use a combination kit (Catalog number LVS08816) in addition to those already delivered.

Combination kits	Horizontal					
Possible combinations						For enclosure W600/W300	**1 wall-mounted enclos. + 1 duct**	**1 wall-mounted enclos. + 2 ducts**	**1 wall-mounted enclos. + 1 enclos. extension**	**1 wall-mounted enclos. + 1 duct + 1 enclos. extension**	**1 wall-mounted enclos. + 2 ducts + 1 enclos. extension**	**1 wall-mounted enclos. + 3 ducts + 1 enclos. extension**

(1) Up to 33 combined modules, these vertical uprights (1676 mm) are mandatory.
(2) Floor standing enclosure combination kit (**LVS08815**) > page E-14.

Up to 630 A

Lifting accessories

The lifting rings are used to move a single wall-mounted or floor-standing enclosure.
For combined enclosures, use the lifting/reinforcement cross-members (see below).

	2 lifting rings for single wall-mounted or floor standing enclosures
	 Catalog numbers	**LVS08801**
Characteristics	
	Set of two lifting rings

	2 Lifting/reinforcement cross-members for combined enclosures W600 + W300						2 Lifting/reinforcement cross-members for combination wall-mounted enclosure W850 + duct W300
							Catalog numbers	**LVS08812**	**LVS08811**	**LVS08811**	**LVS08813**	**LVS08814**	**LVS08826**	**LVS08809**
Characteristics							
	Have 2 types of holes: for lifting and for mounting on a wall						

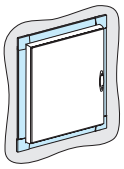
Installation possibilities

Switchboards can be mounted on a wall in three manners: with the hook-on rail system, via the inside of the enclosure or using external wall-mounted brackets.
Combined enclosures can be mounted using the lifting/reinforcement cross-members set of two lifting/reinforcement cross-members.

	Hook-on rail system	Mounting via the inside	Mounting using the external wall-mounted brackets
			Catalog numbers	Delivered with the enclosure	-	**LVS08804**
Characteristics	The enclosure comes with 2 cross-members secured to the back of the enclosure (top and bottom) and a support rail (with levelling adjustment) for screw-mounting on the wall. The enclosure is easily mounted on the hook-on rail system. End the fixation with 2x 8mm diameter screws, at the bottom of enclosure	The enclosure can be mounted through the spacers in the 4 holes provided on the enclosure using 8 mm diameter screws (2 knockouts can be removed if necessary to provide 2 other holes).	4 external wall-mounted brackets.

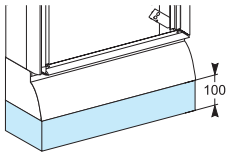
Up to 630 A

Flush-mounting kit

For wall-mounted enclosure		
		


Catalog numbers	**LVS08819**	**LVS08820**
Characteristics	6 to 18 modules PVC frame	21 to 27 modules PVC frame

Plinth raiser

100 mm for floor-standing enclosure			
			


Catalog numbers	**LVS08805**	**LVS08806**	**LVS08807**
Characteristics	For basic floor-standing enclosure or extension. W = 600 mm	For basic floor-standing enclosure or extension. W = 850 mm	For a duct. W = 300 mm

Trunking spreader

Trunking spreader	
	Catalog number	**LVS08824**
Characteristics	For a professional-looking connection between the trunking and the enclosure. Can be installed at the top or bottom. The spreader is marked for cut-outs for standard trunking sizes. The maximum capacity is two 250 x 80 mm trunking sections.

Mounting of devices on doors

Type	Plain door with cut-out W600, W850
	Catalog numbers	Plain door + **LVS03928**
Characteristics	Inclined visor by 30 °. Allows mounting of measurement, inspection, indication 72 x 72, 96 x 96, Ø 16 or Ø 22 mm, 45 x 45 devices. *See page C-40.*

Earthing braid

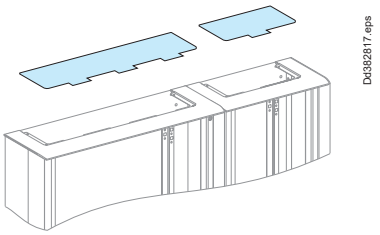
The earthing braid is used to earth a door or partial door with devices.

	Earthing braid, 6 mm²	Earthing wire, 6 mm²
		Catalog numbers	**LVS08910**	**LVS08911**
Characteristics	Equipped with a 4 mm diameter lug at one end and a 6 mm diameter lug on the other. L = 200 mm	Equipped with a 5 mm diameter lug at one end and a 6 mm diameter lug on the other. L = 200 mm

Wall-mounted and floor-standing enclosures

Gland plates

Up to 630 A

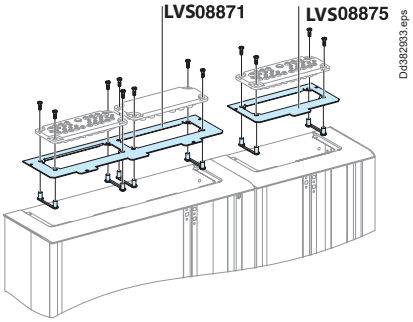


Plain metal gland plates

Enclosures (wall-mounted, floor-standing, ducts) are supplied with a plastic gland plate installed on the top or bottom for wall-mounted enclosures and the top for floor-standing enclosures. For some connections needs, the existing plastic gland plate can be replaced by this metal gland plate.

Plain metal gland plates

		Used with	**Wall-mounted or floor-standing enclos. W600 / 850 mm**	**Duct W300**
Catalog numbers	**LVS08870**	**LVS08874**

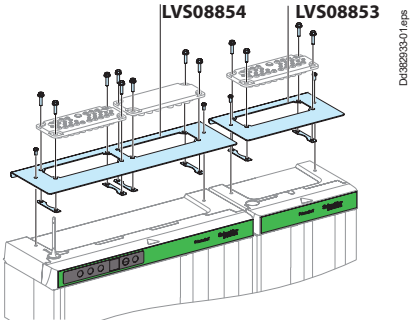


Interface metal plates with cut-outs

The enclosures (wall mounted and floor standing enclosures and ducts) are supplied with a plastic gland plate fitted on the top or bottom plate. This plastic gland plate can be replaced by an interface plate with cut-outs for special cable entry systems made of an insulating material (plain, with knockouts or membrane-type).

Metal interface plates with cut-outs

		Used with	**Wall-mounted or floor-standing enclos. W600 / 850 mm**	**Duct W300**
Catalog numbers	**LVS08871**	**LVS08875**



Metal interface plates with cut-outs

			Used with	**W600**	**W850**	**W300**
Catalog numbers	**LVS08854**	**LVS08855**	**LVS08853**

Gland plates : plain, with knockouts or membrane-type

Mounting on the interface plates ref LVS08871, LVS08875, LVS08853, LVS08854 or LVS08855.

Great capability for meeting the requirements of your installation

PB119167.eps

> 100 % reliable and in compliance with existing standards
All the components (switchgear, splitter blocks, prefabricated connections, etc.) have been designed to work together. All switchboard configurations have been tested. Even the most demanding.

> **Optimised, upgradeable installation**
PrismaSeT G IP55 is the only switchboard in this category designed as a “kit”. All configurations and combinations are possible, with full access. Thanks to the organisation around functional units, the installation evolves simply while preserving its original performance.

> **Ease of setup**
The complete accessibility of all mounting and connection points facilitates assembly and cabling in the workshop. The functional units are clearly identified: operations are intuitive and reliable, and connection and checking are performed naturally.

> Safety of people and property
> Continuity of service
> Robustness
> Ergonomics and complete accessibility
> Optimisation and upgradeability

Up to 630 A

Description

Steel sheet metal with electrophoresis treatment + hot-polymerised polyester epoxy powder.
Enclosure:

- width: 575 mm, with duct: 325 mm
- height: 450 to 1750 mm
- depth: 260 mm with door
- properties of metal enclosures > page G-16

Main characteristics

IP55 enclosure	
Rated operational current	I_n = 630 A - Isc = 50 kA, Icw = 25 kA rms / 1 s, Ipk = 53 kA
Colour	White colour RAL 9003
Standards conformity	EN 62208, IEC 61439-2
Degree of protection	IP55 with door
Degree of protection against mechanical impacts	IK10
Seismic characteristics	2,5G without accessories (IEC 60068-2-57)
Isolation	Class 1
Doors	■ Plain or transparent, opening to right or left 180° ■ Supplied with a handle and keylock (key 405) Distance behind plain door = 78 mm, Distance behind transparent door = 73 mm.

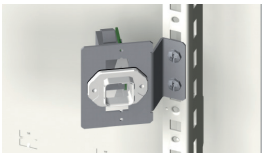
Presentation

Up to 630 A

Fingers safe for cabling
- Painted sheet metal inside, protection for wiring installers' hands

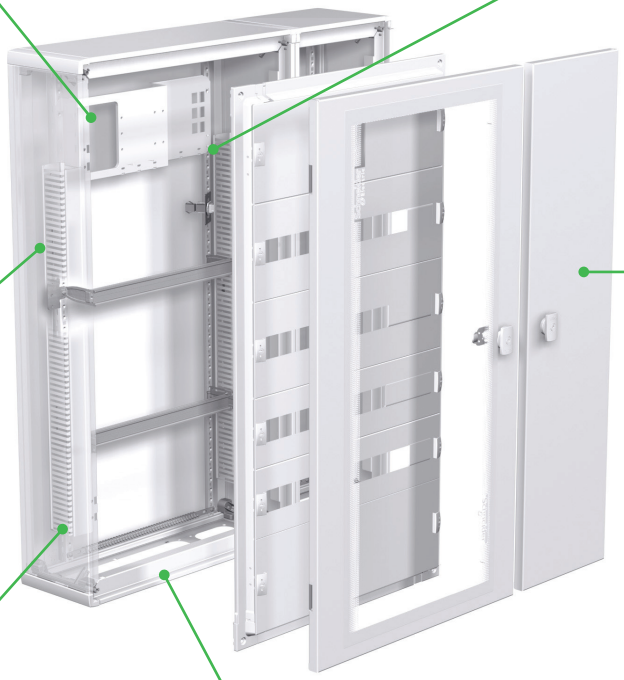
Accessories shared with PrismaSeT G Active, IP30

Plates for connecting control circuits

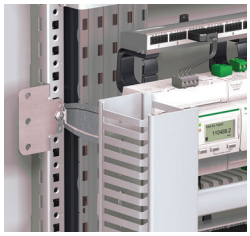


Pre-hooked plates for quick positionning

Full accessibility
- Removable side panels: easy wiring



Trunking support plate, fixed at the same time as the modular rail



Plain or transparent door

Ergonomics and safety
- Easy panel handling thanks to the ergonomic gripper
- Legible "Open/closed" positions of front plate,
- Integrated front plate sealing function

Practical
- Functionalized installation of push buttons, power sockets, etc.
- Installation of power sockets on the side

Weatherproofing
- Large choice of IP55 gland plates

Multiple combinations

Wall mounted and floor standing enclosures

Enclosures are supplied with plain metal gland plates and external mounting brackets.
The doors are reversible, opening 180° to right or left, supplied equipped with a handle with 405 key lock.
The wall mounted and floor standing enclosure extensions and ducts are supplied without combination kits, see table opposite.

Lifting

	Lifting rings
	Catalog number	**LVS08396**
Characteristics	Set of two. supplied with mounting hardware. The lifting rings are secured directly to the switchboard or to the mounting uprights.

WARNING

HAZARD OF DROPPING

- Use strong slings with a valid use-by date when lifting with cranes.
- Attach the slings to the 2 lifting rings or lifting cross-members of the cubicles.
- Secure the switchboard to the wall using the mounting accessories.
- Secure the plinth of floor standing enclosure using the fasteners.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

Note: for combinations of more than two enclosures, the switchboard must be reinforced using mounting uprights (LVS**08391**).

Upright		Plinth		
	Mounting uprights	**Plinth gusset**	**Plinth cover panel (for enclosure)**	**Plinth cover panel (for duct)**
Catalog numbers	**LVS08391**	**LVS08392**	**LVS08393**	**LVS08394**
Characteristics	■ W = 1950 mm ■ Colour: RAL 7016 ■ Supplied with: □ two adjustable fixing brackets, □ one joint for combination with a plinth or another upright. Leave space behind the switchboard for cable running and to improve ventilation. 	■ H = 150 mm ■ Colour: RAL 7016 	■ W = 600 mm ■ Colour: RAL 7016 	■ W = 300 mm ■ Colour: RAL 7016 Quantity to order	For one enclosure, order two uprights. For each enclosure extension or duct, order one additional upright.	For the basic enclosure, order two gussets and one 600 mm wide plinth cover panel. For each enclosure extension or duct, order one additional gusset and the corresponding cover panel.		

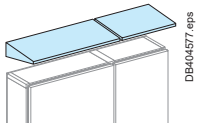
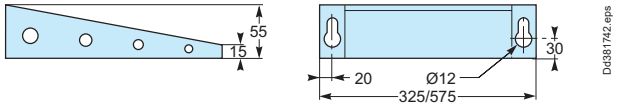
Mounting example				
	On uprights	**On plinth**	**On wall structure**	**Free-standing structure**
				Catalog numbers	3 x **LVS08391**	3 x **LVS08392 + LVS08393 + LVS08394**	3 x **LVS08391** + 3 x **LVS08392 + LVS08393 + LVS08394**	4 x **LVS08391** + 4 x **LVS08392** + 2 x **LVS08393**
Designation	3 mounting uprights	3 gussets + 1 plinth cover panel for enclosure + 1 plinth cover panel for duct	3 uprights + 3 gussets + 1 plinth cover panel for enclosure + 1 plinth cover panel for duct	4 uprights + 4 gussets + 2 plinth cover panels for enclosure
Remarks	The uprights are used to mount on a wall one or more enclosures combined horizontally or vertically.	The plinth, installed in the factory or on-site, raises the switchboard to protect it and facilitate spreading of cables arriving from a trough. The wall-fixing brackets supplied with the plinth ensure that the switchboard cannot topple over.	The supplied external brackets prevent the switchboard from tilting.	Assembly of 2 wall structures connected back-to-back. The switchboard is free-standing. Fixed to the ground and can be moved very easily with lifting rings ref. LVS08396. It can house one or more enclosures.

Canopy

Using	For wall-mounted enclosures W600	For duct W300
		




Catalog numbers	**LVS08386**	**LVS08387**
Characteristics	■ Installed on the mounting uprights or directly on the wall, canopies improve switchboard protection against vertically falling water and objects. ■ Colour: RAL 7016. ■ Supplied with: the hardware required for mounting on the uprights, the components required for combination with another canopy.

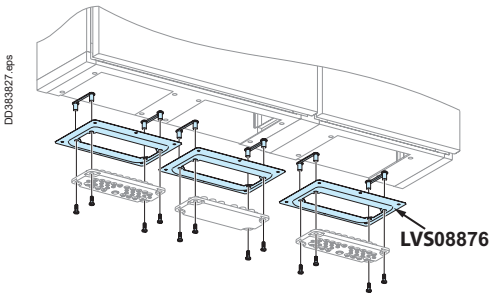
Weatherproof enclosures
Gland plates

Up to 630 A



Metal interface plate with cut-outs

Enclosures are supplied with plain metal gland plates installed on the top or bottom panel of the enclosures (2 plates) or 300 mm wide ducts (1 plate).
These plates can be replaced by metal plates with cut-outs LVS08876 for special cable entry systems made of an insulating material (plain, with knockouts or membrane-type).
They are designed for entry of cables of different cross-sectional areas via the bottom of a switchboard while maintaining the IP55 degree of protection.
The gland plates are easy to install using the mounting kit (supplied with each gland plate) that positions and holds the nuts during installation.
This makes it possible to mount the gland plates using a single tool.

Partial doors and functional units for partial door

Up to 630 A

Partial doors

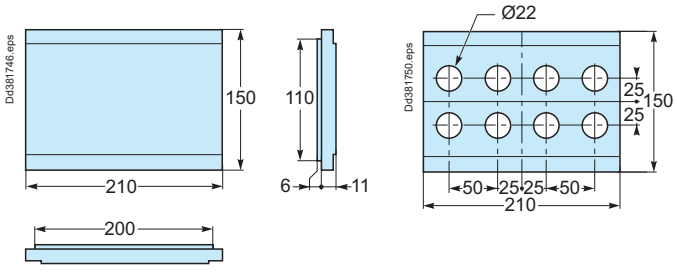
Type	Plain	With cut-outs
		4 modules (H = 200 mm) for enclosure from 11 to 27 modules	-	**LVS08376**
Installation	■ On a wall-mounted enclosure at least 11 modules high (H = 650 mm). ■ The front must be completed with another door (plain or transparent). ■ Each enclosure or extension can be equipped with only one partial door.	
Caractéristiques	-	■ Designed for two mounting plates with 22 mm diameter devices or Schneider Electric industrial sockets. ■ They are supplied with an insulating plain mounting plate that can be used to: □ blank off a reserve hole, □ install all types of devices (sockets, EPO devices, measurement devices). ■ The dimensions of the two holes are 201 mm x 111 mm.
	■ Hinges that open 170° ■ Equipped with a 8 mm male triangle insert (key not supplied).	

Plastic plates for equipping openings on partial doors

They can be installed:

- horizontally on the partial doors with cut-outs
- horizontally or vertically at any point on a door or side panel.

Type	Plain	For 22 mm diameter devices
		Catalog numbers	**LVS08861**	**LVS08862**
Characteristics	■ Can be used to: □ blank off partial doors with cut-outs □ mount any type of device (EPO devices, measurement devices, sockets)	■ For installation of eight 22 mm diameter devices (lights, switches, pushbuttons, etc.) ■ Supplied with 4 blanking plug



Up to 630 A

Side panels with cut-outs

These panels are designed to replace the standard side panel.
They can be mounted on the left or right-hand side.

Side panels with cut-out

Locks

- The small plain and transparent doors (7 to 23 modules) are supplied with a small handle comprising a barrel lock no. 405.
- The large plain and transparent doors (27 to 33 modules) are supplied with a large handle comprising a barrel lock no. 405.
- The partial doors are supplied with an 8 mm male triangle insert.
- All doors can receive as optional equipment:
  - a large or small handle with a barrel lock no. 405. The latter can be replaced by other barrel locks or special inserts
  - a large EURO handle, supplied without a barrel lock
  - door inserts (squares, triangles, double bars, screwdriver slots).

Handles for replacement

Handles

Presentation

Wall-mounted and floor-standing enclosures

Up to 250 A

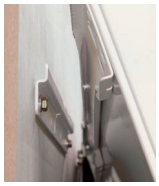
Metallic indoor wall-mounted and floor-standing enclosures delivered in a kit with a limited number of references. Commercial buildings: hotels, offices,shops, etc.

Wall-mounted and floor-standing enclosures delivered flat: total accessibility
Designed for electrical continuity

- **250 A**
- **IP30/IP4X**
- **IK07/08**
- **Seismic characteristics 2,5G**

Gland plate
- Dismountable and cuttable

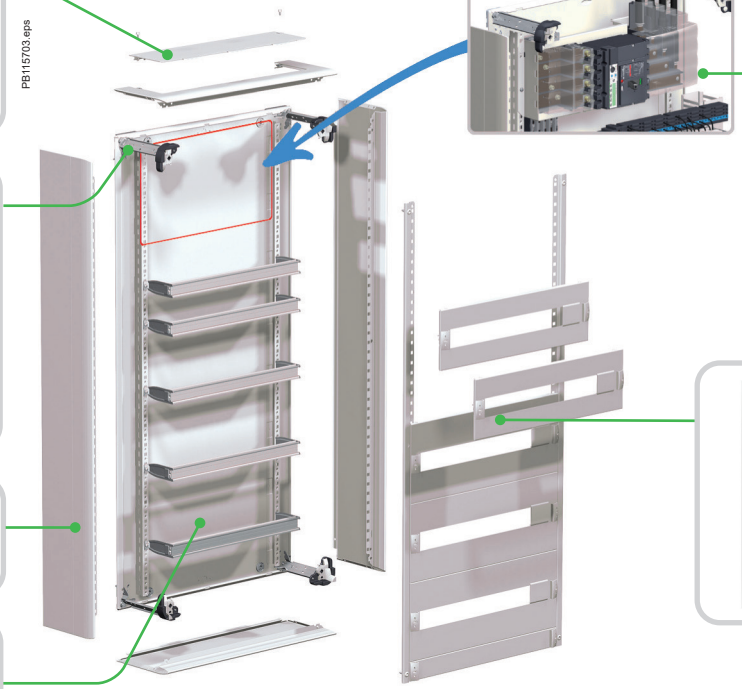
Quick fastening on hook-on rail
- Easy wall mounting



Total accessibility
- Dismountable side panels: flat wiring

Confortable wiring
- Steel sheet metal with inside painting, not aggressive for the hands of the wiring staffs

Common accessories with PrismaSeT G



Free space
- H = 300 mm for incomer device installation at your choice

Ergonomics and safety
- Easy panel handling thanks to the ergonomic gripper
- Legible "Open/closed" positions of front plate
- Integrated front plate sealing function

Description

Steel sheet metal with electrophoresis treatment + hot-polymerised polyester epoxy powder.
Enclosure:
- width: 595 mm
- height: 630 to 1830 mm
- depth: 205 mm without door / 261 mm with door (including the handle : 16.6 mm)
- properties of metal enclosures > page G-16

Main characteristics

PrismaSeT G - Pack 250 enclosures, IP30/IP4X	
Rated operational current	In = 250 A, Isc = 50 kA, Icw = 25 kA rms/1 s, Ipk = 52.5 kA
Colour	White colour RAL 9003
Standards conformity	EN 62208, IEC 61439-1-2-3
Degree of protection	IP30 without door IP40 with door IP41 with canopy + door IP43 with canopy + door + gasket
Degree of protection against mechanical impacts	IK07 withour door IK08 with door (transparent) Ik10 with plain door
Seismic characteristics	2.5G without accessory (IEC 60068-2-57)
Isolation	Class 1
Doors	■ Plain or transparent, opening to right or left, 130° ■ By design, electrical continuity of moving parts ■ Supplied with a handle and keylock (key 405) ■ Distance behind door = 58 mm
Mounting	Surface mounting, floor-standing, flush-mounting via a kit

Wall-mounted and floor standing enclosures
W600

Up to 250 A

Each enclosure is delivered with H = 150 mm front plates and rails for modular devices (quantity according the number of rows) and a plastic gland plate.

Wall-mounted and floor standing enclosures W600

LVS08272	900	LVS03817 x 2
LVS08273	1050	LVS03817 x 2 + LVS03813 x 1
LVS08274	1200	LVS03816 x 4

Other combinations are possible to complete the zone C, including 7 heights of 300 mm width front-plates:

Height (mm)	Cat. no.
50	LVS03811 (3)
100	LVS03812
150	LVS03813
200	LVS03814
250	LVS03815
300	LVS03816
450	LVS03817

(3) Mounting 1 module front plate (LVS03811) on the extreme top or bottom is not allowed.

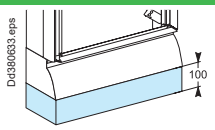
Up to 250 A

Installation possibilities

Switchboards can be mounted on a wall in three manners: with the hook-on rail system, via the inside of the enclosure or using external wall-mounted brackets. Combined enclosures can be mounted using the lifting/reinforcement crossmembers set of two lifting/reinforcement cross-members.

	Hook-on rail system	Mounting via the inside	Mounting using the external wall-mounted brackets
			Catalog numbers	Delivered with the enclosure	-	**LVS08804**
Characteristics	The enclosure comes with 2 cross-members secured to the back of the enclosure (top and bottom) and a support rail (with levelling adjustment) for screw-mounting on the wall. The enclosure is easily mounted on the hook-on rail system. End the fixation with 2x 8mm diameter screws, at the bottom of enclosure	The enclosure can be mounted through the spacers in the 4 holes provided on the enclosure using 8 mm diameter screws (2 knockouts can be removed if necessary to provide 2 other holes).	4 external wall-mounted brackets.

Plinth raiser

Plinth raiser		
		


Catalog numbers	**LVS08805**	**LVS08807**
Characteristics	For basic floor-standing enclosure or extension W = 600 mm	For a duct W = 300 mm

Lifting accessories

The lifting rings are used to move a single wall-mounted or floor-standing enclosure. For combined enclosures, use the lifting/reinforcement cross-members (see below).

	2 lifting rings for single wall-mounted or floor-standing enclosures	Lifting/reinforcement cross-members for combined enclosures
		Catalog numbers	**LVS08801**	**LVS08812**
Characteristics		
	Set of two lifting rings	Have 2 types of holes: for lifting and for mounting on a wall

⚠ WARNING

HAZARD OF DROPPING

- Use strong slings with a valid use-by date when lifting with cranes.
- Attach the slings to the 2 lifting rings or lifting cross-members of the cubicles.
- Secure the switchboard to the wall using the mounting accessories.
- Secure the plinth of floor standing enclosure using the fasteners.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

F

Up to 250 A

Accessories to increase the degree of protection IP

	Canopy to increase the IP value from IP30 to IP41 (1)		Gasket for the door to increase the IP value from IP31 to IP43
			Used with	**1 wall-mounted enclosure**	**1 wall-mounted enclosure + 1 duct (2)**	**Enclosures or a duct from 6 to 33 modules**
			
Catalog numbers	**LVS08830**	**LVS08832**	**LVS08841**
Designation	The addition of a canopy over a wall-mounted or floor-standing enclosure equipped with a door ensures compliance with the degree of protection IP41. With the canopy assembeled, only bottom cable entry can be offered.		When the switchboard is equipped with a canopy, a gasket for the doors ensures compliance with the degree of protection IP43. L = 5.3 m

(1) With a door, the IP30 become IP40
With a door + canopy, the IP30 become IP41.
(2) Whatever the duct position.

Up to 250 A

Gland plates

Enclosures (wall-mounted, floor-standing, ducts) are supplied with a plastic gland plate installed on the top or bottom for wall-mounted enclosures and the top for floor-standing enclosures.
The existing plastic gland plate can be replaced by this metal gland plate or by an interface plate with cut-out.

Wall-mounted and floor-standing W600 and duct W300	Pages

Additional Information

Contents

G

Electrical characteristics

The PrismaSeT G system takes into account the installation and connection conditions of Schneider Electric devices.
The entire installation complies with standard IEC 61439-1 and 2 of tested switchboard.

PB115625_65.eps

In the following pages you will find a number of examples, validated for PrismaSeT switchboards, intended to assist in determining the busbars as well as the upstream and downstream connections for the installation.
The examples assume that the devices have already been selected.
A complete process involves a number of steps before making final choices (transformer, conductors, protection, etc.).
Schneider Electric offers a number of tools to assist in designing a complete installation (technical guides, software).

Busbar sizing

The factors that must be taken into account in determining the size of busbars include:

- the diversity factor.

Not all the loads supplied by a set of busbars are used at full rated load or at the same time. The diversity factor is the means to determine the maximum load current used to size the busbars.

Standard IEC 61439-1 and 2 §4.7 specifies the table below:

Number of circuits	Rated diversity factor (RDF)
2 and 3	0.9
4 and 5	0.8
6 and 9	0.7
10 and more	0.6

- the degree of protection IP.
- the ambient temperature around the switchboard.

Supply of devices for outgoers ≤ 630 A

Flexible copper bars with an insulating cover.
To determine the required sizes for flexible bars, see the tables starting on *> see page G-3* which indicate the correct size for each type of connected device.

- an insulated flexible bar (not connected) must meet standards IEC 60243-1, (dielectric, *> see page G-3*), NFC 32201 (insulation) and IEC 60332-1 (fire)
- a flexible bar connected to a device in an enclosure must comply with standard IEC 61439-1 and 2.

Cables
To determine the cables required, see the tables. on *> see page G-5*.
They can be used to determine:

- the size of cables as a function of:
  - the circuit breaker rating
  - the current
  - the ambient temperature around the switchboard
- the permissible current for individually tied cables or touching cables as a function of:
  - the size of the cables
  - the degree of protection for the switchboard.

Rapsody software
Easy design with
> see page B-20

Electrical characteristics

Flexible copper bars with an insulating sheath

Switchboards that comply with standard IEC 61439-1 and 2

It is imperative to use the values indicated below that have been validated for the installation of devices in Prisma**SeT** switchboards.
The parameters determining the size of flexible bars are:
- the environment in which the devices are installed:
  - position in the enclosure
  - dimensions of other conductors in the circuit
  - ambient temperature around the switchboard
- the characteristics of the connected devices:
  - device heat losses
  - the type of installation (horizontal or vertical)
  - the type of device (fixed or withdrawable).

Only the equipment manufacturer with in-depth knowledge on:
- the characteristics of the installed devices
- the configuration of the installation in the enclosure can provide the correct sizes of flexible bars for a given permissible current.

Insulated flexible bars brings flexibility, easy ans quick installation.

Insulated flexible bars are better solution than cables:

- better insulation temperature withstand (125 °C for bars, 105 °C for cables) and a larger exchange surface for an equivalent size, i.e. a smaller size for a given current
- greater rigidity offering better electrodynamic characteristics for short-circuit currents
- no intermediate parts (lugs) for a direct connection between the device and the busbars therefore less temperature rise and less risk of error
- fast implementation of prefabricated connections already cut to length, formed and drilled.

Technical characteristics
- thickness of the insulation: variable depending on the bar size, 2 mm on average
- rated insulation level Ui = 1000 V
- impulse withstand voltage Uimp = 12 kV
- maximum withstand temperature of insulating material = 125 °C.

Connection

In all enclosures with IP ⩽ 55
- the switchboard internal temperature is 60 °C
- the withstand temperature of the insulating material is 125 °C.

If the withstand temperature of the insulation is only 105 °C, use the next largest flexible bar.
The bar sizes (S) indicated below take into account the derating curves of devices.

Connection of devices and distribution blocks to busbars

Cables

Schneider Electric provides cabling recommendations according to the rating of the circuit breaker.
The size of cables must be selected according to:

- the level of current
- the ambient temperature around the conductors
- the degree of protection for the switchboard.

When mounting Schneider Electric prefabricated connections, short terminal shields can be used or not if the function is already integrated in prefabricated connections.
Note: For some devices, it is recommended to use Schneider Electric prefabricated connections. If not, switchgears must be equipped with long terminal shields for personnel safety.

G

Size of PEN protective conductor

Practical guidelines

The size of the PEN is determined in the same manner as a neutral conductor, i.e.:
- for copper single-phase circuits or sized y 16mm², it must be the same size as the phase conductors
- for copper three-phase circuits sized > 16 mm², it can be:
  - the same size as the phase conductors
  - smaller on the condition that:
    - the current likely to flow in the neutral during normal operation is less than the permissible current for the conductor
    - the power rating of single-phase loads does not exceed 10 % of the total rating.

The conductor must be accessible to enable connections both in the factory and on site, as well as checks on the tightness of connections.

Implementing the PEN protective conductor

Practical guidelines

According to standard IEC 61439-1 and 2, the practical guidelines for implementing the PEN are the following:
- at the entry to the assembly, the PEN connection must be next to the phase connections
- within the assembly, the PEN does not need to be insulated from the exposed conductive parts (except on sites where there is a risk of fire or explosion)
- the size of the conductor must be at least equal to that of the neutral
- the size must remain constant throughout the main busbars
- the change from a TNC to a TNS system must take place at a single point in the switchboard, via a marked neutral-disconnection bar that is accessible and can be dismantled to facilitate the impedance measurement of the fault loop
- after the TNS creation point, it is forbidden to recreate a TNC system.

The PE and the neutral must meet their specific requirements.

Electrical characteristics

- To ensure protection of persons, first connect the switchboard protective conductor to the earth electrode.
- Tie the cables as close as possible to the connections to avoid any mechanical stresses on the device terminals. When not using cable glands, also attach the cables near to the electrical switchboard.
- Cables must never be in contact with or passed between live conductors.
- Sharp edges of the framework must be protected where cables pass to avoid damaging the conductors.
- Comply with a minimum radius of curvature of 6 to 8 times the cable outside diameter.
- All power connections must be made with class 8.8 mounting hardware and elastic contact washers, tightened to the torque indicated in the table below.
- When connecting aluminium cables to copper terminals, use bimetal lugs or interfaces.
- Separate the different types of circuits into separate cable bundles (power, control, 48 V, 24 V, DC, AC, etc).

Cable bundles

Cable cross-sectional area (mm^2)	Max. number of cables per bundle
CSA ≤ 10	8
16 < CSA ≤ 50	4
CSA ≥ 50	Tie individually

Tying the cable bundles

Type of tie	Maximum Icw (kA/rms 1s)	Distance between ties (mm)
Width: 4.5 mm Load: 22 kg	10 15 20	200 100 50
Width: 9 mm Load: 80 kg	20 25 35 45	350 200 100 70

For cable sizes of 50 mm^2 or more, use 9 mm wide fixing ties.

Recommended tightening torque for mechanical and electrical connections with 8.8 class screws.

Diameter of screw	Tightening torque (Nm) (with nut + contact washer)
M3	1.5
M4	3.5
M5	7
M6	13
M8	28
M10	50
M12	75

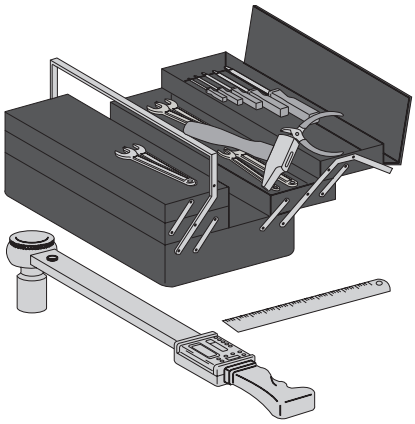
Tools required for mounting and connection

Practical information

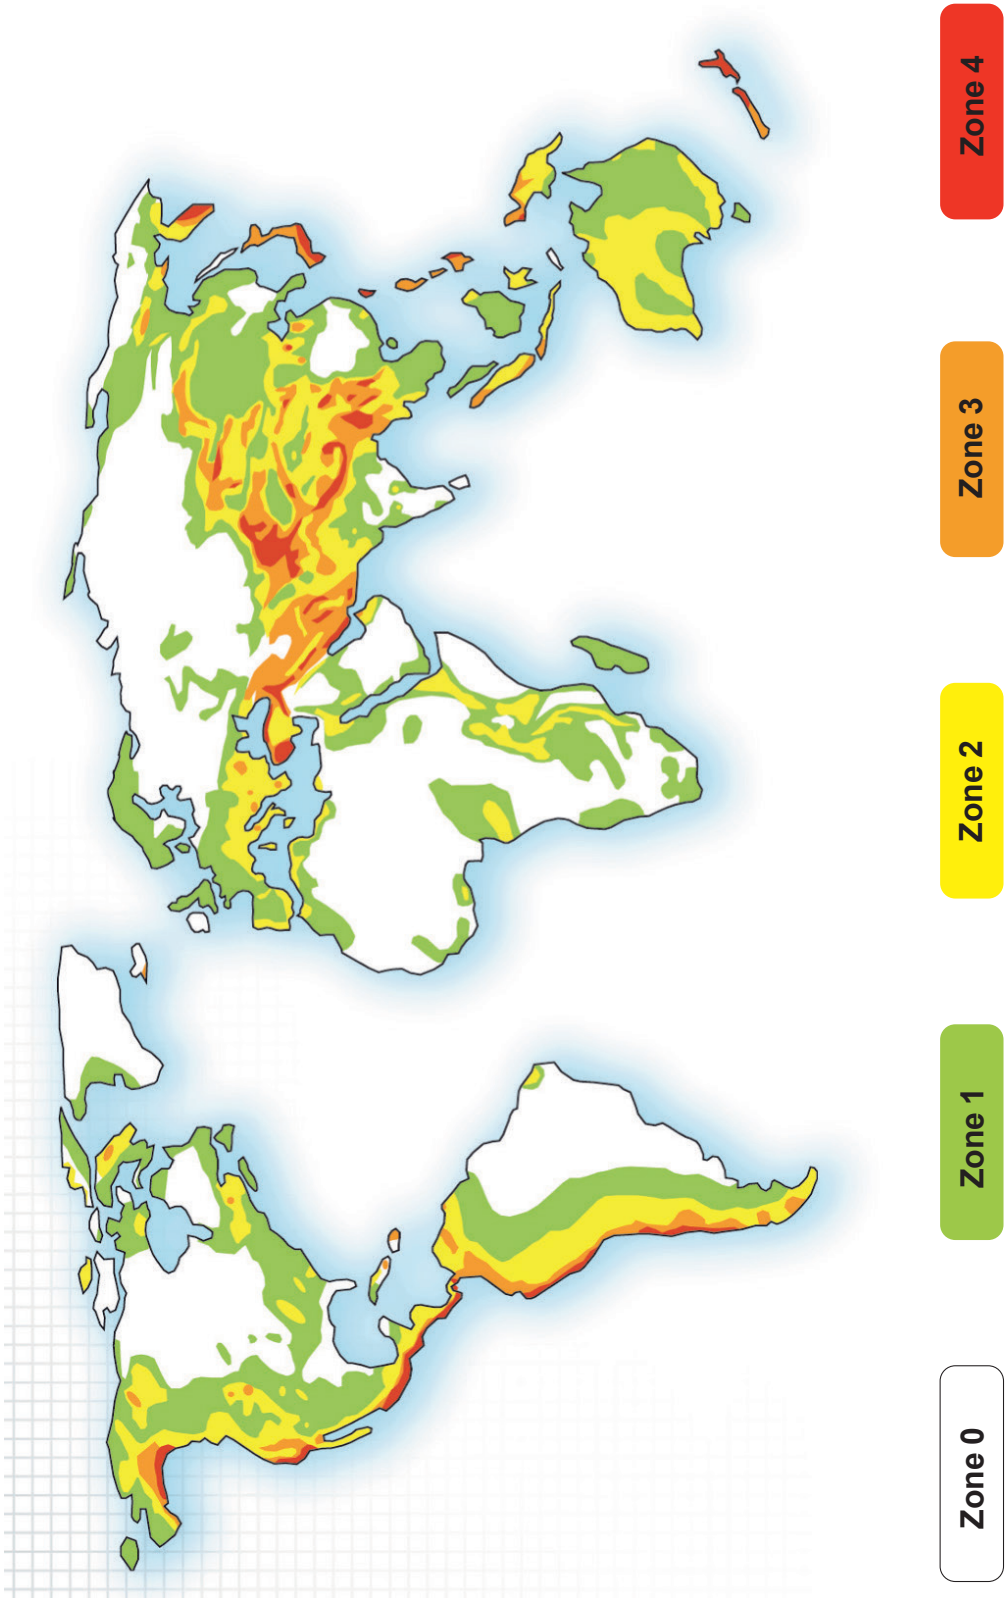
DD383904.eps



- Vacuum cleaner to clean the switchboards
- Ratchet wrench with sockets
- Torque wrench with sockets and ring bits to tighten the electrical connections to the correct torque (max. torque 50 Nm)
- Open-ended spanners (15 to 27 mm)
- Electrician's knife
- 7, 8, 10, 13, 16, 17 and 19 mm sockets
- Bit holder socket
- 4, 5, 6, 8 and 10 mm hexagonal-head bits
- Pozidriv no. 1, 2 and 3 bits
- Rubber mallet
- Level
- Measurement and inspection tools and instruments
- Drill
- Semi-circuit nosed pliers
- Cable-tie pliers
- Wire stripper
- Crimping tool
- Diagonal cutter
- Wire cutters
- Flat-nosed pliers
- Bit holder for screwdriver
- Extension
- Electric saw
- Jig saw
- Clamp for cubicle alignment
- Buzzer or tester
- 3, 4, 5, 5.5 and 8 mm flat screwdrivers
- Posidriv no. 2 crosshead screwdriver (to mount handle)
- Hydraulic jacks that can be operated in horizontal position to lift cubicles and move them sideways if necessary
- Coloured, indelible and temperature resistant acrylic varnish
- Electric screwdriver

Seismic zone

Around the world can be found different zones with a specific seismic risk.
These zones have been classified according to the Uniform Building Code (UBC).



Switchboard qualification

Tests are carried out on switchboards to ensure that they operate correctly (structural and functional integrity) under severe earthquake conditions and meet specific safety requirements.
The tests carried out to qualify these switchboards are described in the international standard IEC 60068-3-3.

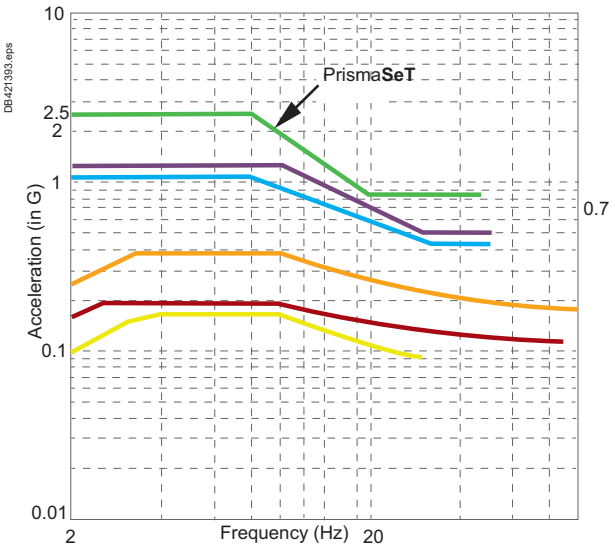
Classification

From weak to strong earthquakes, PrismaSeT G has been tested in the following ground accelerations to guarantee the right performance on seismic risk.

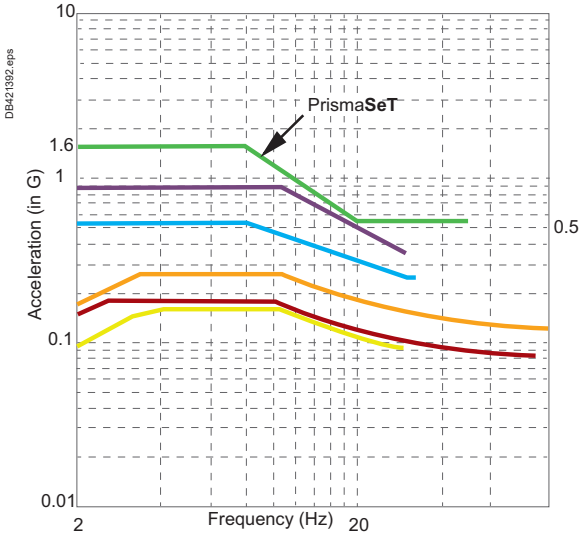
IEC 60068 -3-3 Ground acceleration	Seismic characteristics			
References	General description	Richter scale magnitude	MSK Intensity	UBC Zone
AG2	Intensity from weak to average	< 5 .5	< VIII	0 1
AG3	Intensity from average to strong	5.5 to 7.0	VIII to IX	2 3
AG5	Intensity from strong to very strong	> 7.0	> IX	4

PrismaSeT G is compliant up to level AG5 from IEC 60068-3-3 (2,5G) :

Compare PrismaSeT G Switchboards Performances with seismic Standard Damping % - **horizontal**



Compare PrismaSeT G Switchboards Performances with seismic Standard Damping % - **vertical**



Country	Standard	Parameters
PrismaSeT G	IEC60068-3-3	Up to level AG5
Russia	GOST 17516.1-90	Civil Market (Seismic intensity 8, all installation levels) or (Up to Seismic Intensity 9, Level 1 only)
Chile	ENDESA 1986	All seismic categories
Turkey	Seismic Turkish Code 2009	All seismic zones, all site class
Greece	EAK 2000	All soil types, Worst case
Australia	AS1170	All soil types, Worst case

Warning: use the seismic kit **LVS04130** when using linergy BW *> see page D-4*

What is a standard?

A common reference

"A standard helps to define a common language between economic stakeholders (producers, users and consumers), to clarify and harmonize practices and to define the levels of quality, safety, compatibility, and least environmental impact of products, services and practices.
Standards facilitate trade, both national and international, and help to better structure the economy and facilitate the everyday life of everyone."

Afnor definition

IEC international standards

The IEC (International Electrotechnical Commission) is a worldwide organisation for standardisation comprising all national electrotechnical committees (IEC National Committees).
The object of the IEC is to promote international cooperation on all questions concerning standardisation in the electrical and electronic fields.
To that end, the IEC publishes International Standards.
Their preparation is entrusted to technical committees and any IEC National Committee interested in the subject dealt with may participate in the preparatory work.

National standards

In Europe

The IEC documents are first studied by CENELEC, which establishes:

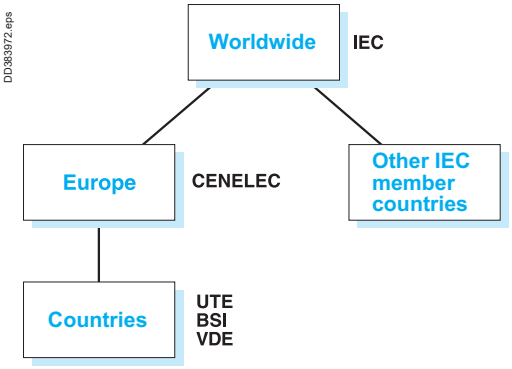
- either a European standard (EN), often identical to the IEC standard, which then becomes the applicable national standard in all the member countries
- or, in the event of differences, a harmonisation document (HD).

Other IEC member countries

Each country is autonomous and can accept the IEC standard as the national standard, with or without modifications.
Even though they are IEC members, countries such as Japan and the United States continue to develop their own standardisation systems.

Countries without a standardisation system

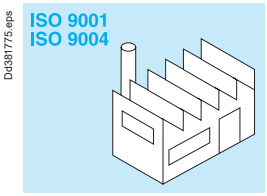
It is possible to refer to an IEC standard in the framework of a project.



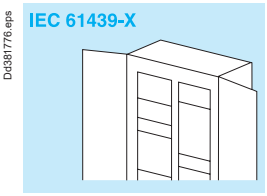
CEI / IEC
Commission Electrotechnique Internationale
CENELEC
Comité Européen de Normalisation ELECtrotechnique
UTE
Union Technique de l'Électricité
VDE
Verband der Elektrotechnik, Elektronik und Informationstechnik e.v. (German electrotechnical, electronics and computer technology standardisation organisation)
BSI
British Standards Institution

The different types of standards

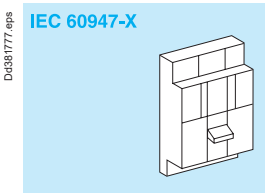
There are different types of standards, including:
- management standards
- installation standards
- product standards.



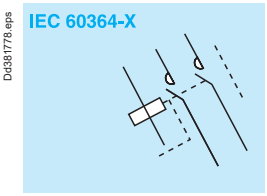
Design and manufacture.



Switchgear and controlgear assemblies.



Switchgear and controlgear.



Installation.

Management standards

ISO 9004: Quality-management systems - guidelines for performance improvements. Used in setting up a quality-management system.

ISO 9001: Quality management systems - requirements. Used for certification audits.

ISO 14004: Environmental-management systems. General guidelines on the principles, systems and supporting techniques.

ISO 14001: Environmental-management systems. Specification with guidance for use.

The majority of Schneider Electric development centres and factories are certified ISO 9001 and ISO 14001.

Low voltage installation standards

The set of IEC 60364 standards defines the main principles and rules for the design and the mounting of the electrical installation:
- determining general characteristics of installations
- protection
- selection and installation of equipment
- verification and maintenance of installations.

Switchgears standards

They apply to devices or assemblies and are aimed at ensuring correct operation and safety of the concerned products:

- standards on low voltage switchgear and controlgear:
  - IEC 60947-1: general rules
  - IEC 60947-2: circuit breakers
  - IEC 60947-3: switches and disconnectors
  - IEC 60947-4: contactors
  - IEC 60947-7-1: terminal blocks for copper conductors
  - IEC 62208: empty enclosures.

- The IEC 61439 switchboard standard:
  - characterizes the electrical switchboard and specifies the design, construction and verification rules
  - describes in detail all low voltage switchgear and controlgear: definitions, technical characteristics, conditions of use, and construction and verification requirements
  - applies to power switchgear and controlgear assemblies (PSC assemblies) whose rated voltage does not exceed 1000 V in alternating current or 1500 V in direct current.

Regulations in a given country may make certain standards legally binding and may also create additional safety requirements.

In addition to providing proof of the conformity of its quality-management system, a product manufacturer can demonstrate the quality of products by providing proof that the design and manufacture comply with the requirements in the applicable standard.
Proof of conformity may be a declaration by the manufacturer or a certificate supplied by an independent organisation.

> More informations in *pages B-14* to *B-17*.

Enclosure standards

Standard IEC 62208 lay down definitions, classifications, characteristics and test requirements for enclosures used for switchgear and controlgear assemblies.
They apply to empty enclosures before installation of the devices by the panelbuilder, as supplied by the manufacturer.
They apply to one-piece enclosures and to enclosures supplied in kit form.

Type tests of standard IEC 62208

1 - Static load
2 - Hoisting
3 - Axial loads of metal inserts
4 - IK code
5 - IP code
6 - Thermal stability
7 - Resistance to heat
8 - Resistance to abnormal heat and to fire
9 - Dielectric strength
10 - Protective-circuit continuity
11 - Weather resistance
12 - Corrosion resistance
13 - Marking

CE marking

CE marking is a regulatory symbol attributed under the sole responsibility of the manufacturer and intended for the verification authorities of the European countries that enforce the European regulations.
It allows free circulation of a product in the European Union and certifies that it complies with the basic requirements in all the applicable European directives.
CE marking is not a quality symbol and does not indicate conformity with a standard

The CE declaration is intended exclusively for the authorities in charge of verifying compliance with the applicable regulations and it is drafted, signed and held for presentation to the authorities by the manufacturer.
For the Prisma**SeT** range, the declaration is the responsibility of the Schneider Electric unit that has designed and developed the product.
For LV switchboards, the declaration is the responsibility of the panelbuilder.

The following products receive CE marking:
- all products that are liable to endanger the safety of persons, animals and property (LV directive)
- all products likely to emit electromagnetic disturbances above a standardised threshold or to be disturbed during operation (EMC directive).

Consequences:
- the Prisma**SeT** range falls under the LV directive only
- LV switchboards are covered by the LV directive and may also fall under the EMC directive, depending on the type of devices incorporated.

CE

For the Prisma**SeT** range, CE marking is applied:
- on the packing of "mechanical" components
- on the product itself for "electrical" components.

For the LV assemblies created by the panelbuilder, CE marking is applied:
- on the packing
- on the rating plate (if applicable)
- on one of the documents accompanying the switchboard when it is shipped.

Standards

Schneider Electric enclosures comply with standard IEC 62208 for empty enclosures. The sheet metal used for Schneider Electric enclosures receives an anti-corrosion epoxy electrophoresis treatment and a coating of a thermosetting, polyester-resinmodified epoxy powder for colour and appearance.
This two-coat system provides excellent finish and corrosion protection.
The characteristics of this coating are much better than those of traditional epoxy powders:

- improved colour stability
- wider operating temperature range.

Mechanical properties of enclosures

Static load on doors, wall-mounted and floor-standing enclosures and cubicles	
Floor-standing enclosure	64 kg
Wall-mounted enclosure	48 kg
Floor-standing enclosure door	4 kg
Wall-mounted enclosure door	4 kg

Mechanical properties of powder coated surfaces

Test conditions
Test piece made of 1 mm thick steel sheet, degreased, iron phosphated, final rinsing with 100000 Ω cm DI water, 15 microns of anti-corrosion electrophoresis treatment and 35 microns of powder paint.

Adhesion (cross-hatch and pull-off)	class 0 required	(ISO 2409)
Impact strength (1)	> 1 kg/50 cm	(ISO 6272)
Mandrel bending test (2)	< 10 mm	(ISO 6860)
Persoz hardness	300 s	(ISO 1522)

Artificial ageing test on powder coating

Test conditions: two tests carried out on the same 1 mm thick steel sheet test piece.

- cyclical damp-heat test:
  - as per standard IEC 68-2-30
  - six 24-hour cycles at temperatures higher than 40 °C
- continuous resistance to neutral salt mist:
  - the tests were carried out over a period of 400 hours, far more than the 48 hours required by the standard for indoor installations
  - as per standard IEC 68-2-11 and ISO 7253
  - 400 hours without blistering for normal surface on test piece
  - 250 hours for a scratched surface.

Evaluation of corrosion as per ISO 4628:

- adhesion: class ≤ 1
- blistering: degree 1 dim.1
- rusting: Ri 1
- cracking: class 1
- flaking imp. 1 dim. 1
- propagation of corrosion under scratch with respect to the scratch axis: 3 mm max.

Chemical properties of powder coating

Tests carried out at ambient temperature on phosphated test pieces coated with a 150 to 200 micron film.

Test duration (months)			**2**	**4**	**6**	**8**	**10**	**12**
Acids		Concentration						
	Acetic	20 %						
	Sulphuric	30 %						
	Nitric	30 %						
	Phosphoric	30 %						
	Hydrochloric	30 %						
	Lactic	10 %						
	Citric	10 %						
Bases	Soda	10 %						
	Ammonia	10 %						
Water	Distilled water							
	Seawater							
	Tap water							
	Diluted bleach							
Solvents	Petrol							
	High alcohols							
	Aliphatics							
	Aromatics							
	Ketones, esters							
	Tri-perchlorethylene							

Film intact.

Film damaged (blisters, yellowing, loss of shine).

(1) No cracking of the paint film after dropping a weight of one kilogram on the test piece from a height of 50 centimetres.
(2) Film cracks over a length of 10 millimetres maximum.

Degree of protection

Standard IEC 60364-5-51 lists and codifies a large number of external influences to which electrical installations can be subjected, including the presence of water, solid objects, shocks, vibrations, corrosive substances, etc.

IP code

Standard IEC 60529 (IP code, February 2001) indicates the degrees of protection provided by an enclosure for electrical devices against access to hazardous parts, against penetration of solid foreign objects and against penetration of water.
These standards do not apply for the protection against the risks of explosion or conditions such a humidity, corrosive vapour, fungus or vermin.
The IP code is made up of two characteristic numerals and can include an additional letter when the actual protection for persons against access to the hazardous parts is better than that indicated by the first numeral.
The first numeral characterises the protection provided against the ingress of solid foreign objects and the protection of persons. The second numeral characterises the protection provided against the ingress of water with harmful effects.

1st numeral Protection of persons		Protection against ingress of solid objects	
1	Protected against access with back of hand Dd381959.eps 	Protection against solid foreign objects larger than 50 mm Dd381959.eps 2	2 Protected against access with a finger Dd381960.eps 	Protection against solid foreign objects larger than 12.5 mm Dd381963.eps 
3	Protected against access with a tool Dd381961.eps 	Protection against solid foreign objects larger than 2.5 mm Dd381961.eps 4	4 Protected against access with a wire Dd381962.eps 	Protection against solid foreign objects larger than 1 mm Dd381962.eps 5	Protected against access with a wire Dd381962.eps 	Protected against dust (dust protected) Dd381964.eps 6	Protected against access with a wire Dd381962.eps 	Dust tight Dd381965.eps 
2nd numeral Protection against ingress of water	
1	Protected against vertically dripping water (condensation) Dd381966.eps 2	Protected against dripping water up to 15° from vertical Dd381967.eps 
3	Protected against spraying water up to 60° from vertical Dd381968.eps 4	Protected against splashing water from all directions Dd381969.eps 5	Protected against water jets from all directions Dd381970.eps 6	Protected against powerful water jets from all directions Dd381971.eps 7	Protected against the effects of temporary immersion in water Dd381972.eps 8	Protected against the effects of continuous immersion in water Dd381973.eps 9	Protected against close-range high pressure, high temperature spray downs

G

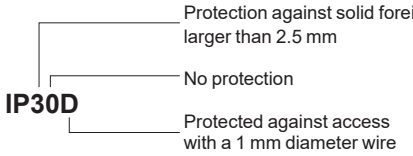
Additional letter

The additional letter is used only if the actual protection of persons is higher than that indicated by the first characteristic numeral of the IP code.

Additional letter	Protection
A	A Protected against access with back of hand
B	B Protected against access with a 12 mm diameter finger
C	C Protected against access with a 2.5 mm diameter tool
D	D Protected against access with a 1 mm diameter wire

If only the protection of persons is of interest, the two characteristic numerals are replaced by the letter "X", e.g. IPXXB.

Illustration of the above explanations:



Remarks

- The degree of protection IP must always be read and understood numeral by numeral and not as a whole.

For example, an IP31 wall-mount enclosure is suitable for an environment that requires a minimum degree of protection IP21. However an IP30 wall-mount enclosure is not suitable.

- the degrees of protection indicated in this catalog are valid for the enclosures as presented. However, the indicated degree of protection is guaranteed only when installation and device mounting are carried out in accordance with professional standards that conserve the initial degree of protection.

IK code

Standard IEC 62262 defines an IK code characterising the capacity of products to resist mechanical impacts from all sides.

IK code	Impact energy (joules)
01	0.14
02	0.2
03	0.35
04	0.5
05	0.7
06	1
07	2
08	5
09	10
10	20

IK codes can be selected according to the risks of impacts on a given site.

	Site	Recommended IK
No risk of major impact	Technical premises	07
Significant risk of impact that can damage devices	Hallways	08 (switchboard with door)
Maximum risk of impact that can damage the switchboard	Workshops	10

Selection of enclosures according to the premises

Enclosure characteristics

The IP and IK degrees of protection provided by an enclosure must be specified as a function of the various external influences defined by standard IEC 30364-5-51, in particular:

- presence of foreign solid bodies (code AE)
- presence of water (code AD)
- mechanical stress (code not specified)
- capability of persons (code BA)

PrismaSeT G switchboards are designed for indoor installation.
Unless the rules, standards and regulations of a specific country stipulate otherwise, Schneider Electric recommends the following IP and IK values based on French guide UTE C 15-103 (March 2004).

Using the table

1. Opposite the relevant premises, read the recommended IP and IK values.
2. The ■ symbol indicates the enclosure or cubicle satisfying the criteria of the UTE guide.
   Any enclosure or cubicle with a higher degree of protection can also be used.
3. If several degrees of protection are possible (refer to the standard for more details) and the □ and ■ symbols are indicated (e.g. 24□/25■), enclosures that correspond to the higher degree of protection (■) are suitable for the lower degree of protection (□).

Example:
Selection of an enclosure for a laundry room.
Minimum degree of protection: IP21/IK02
A wall-mounted enclosure with a door (plain or transparent), a canopy and a gasket offer IP43/IK08 degrees of protection and are therefore suitable for this application.

Type of premises	Enclosures						
	Wall-mounted enclosure		without door	with door (1)	with door + canopy (1)	with door + canopy + gasket (1)	IP55

G

Thermal management of switchboards
General

Thermal characteristics

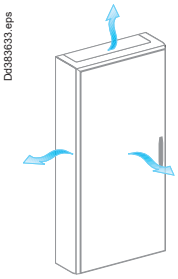
A switchboard is designed for operation under normal ambient conditions.
Most devices do not operation correctly outside a temperature range of -10 and +70 °C.
It is therefore important to maintain the switchboard internal temperature within this temperature range by:
- correctly sizing the switchboard during design
- correcting the temperature using suitable means.

Management of the internal temperature

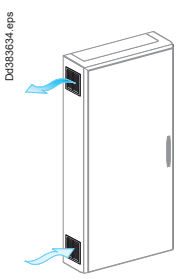
Cooling

There are a number of way to dissipate heat from the switchboard.
The drawings below present the various means.

Convection

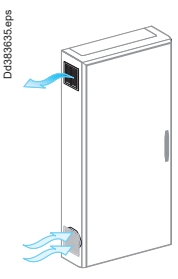


IP > 31
Ensured naturally in Prisma**SeT** enclosures.



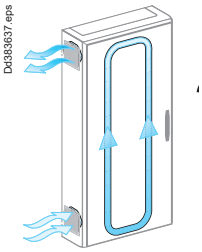
IP ⩽ 31

Forced-air ventilation



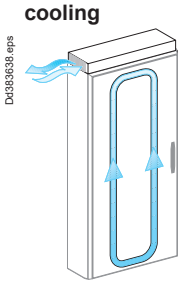
IP ⩽ 54
Using fans, it significantly increases the thermal capacity of an enclosure.

Forced-air ventilation with air-air exchanger



IP > 31
On special request.

Forced convection and cooling

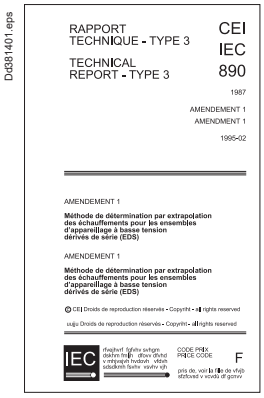


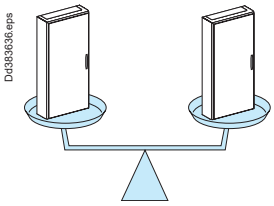
IP > 31

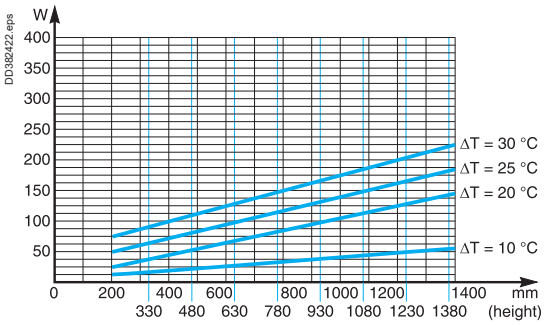
For these extreme cases, many installers prefer to set up the switchboards with other electrotechnical and electronic devices in air-conditioned electrical rooms.

Heating

The means employed to raise the internal temperature in a switchboard is a resistorbased heater, used to:
- avoid condensation by limiting variations in temperature
- ensure that the switchboard does not freeze.







Calculation of the internal temperature

Calculation of the temperature is the means to check that the enclosure can evacuate the dissipated power of the installed devices.

Important note

Correct thermal management of the switchboard depends on compliance with the installation requirements for the distribution system (power circuits).
Incorrect installation will have major consequences on the connected device, but almost none on the internal temperature of the enclosure.
Once the circuit has been correctly sized, it is necessary to check whether the assembly (devices + distribution system + cables) have a level of dissipated power P(W) ⩽ the P(W) that the enclosure can handle.

Method defined by IEC 890 technical report

This IEC guide for switchboards proposes a calculation method to determine three levels of internal temperature, depending on the dissipated power of the devices and distribution blocks installed in the switchboard.
Users can consult this document when it is necessary to determine precisely the internal temperature in view of optimising the switchboard.
On request, Schneider Electric can carry out a thermal study to check that the installed assembly and the thermal capacity of the enclosure are compatible.

Comparative method

A number of qualified and tested configurations serve as the basis for indicating the thermal capacity of Prisma**SeT** enclosures.
This is en empirical means to check whether the dissipated power of the desired configuration is close to that of a tested configuration.

Method using charts taking into account enclosure characteristics

To speed up calculations, Schneider Electric produces charts based on the company's experience and a number of assumptions on the installation.
They can be used sufficiently precisely to determine the variations in temperature and the dissipated-power levels for the different types of wall-mount enclosures, floor-standing enclosures and cubicles.

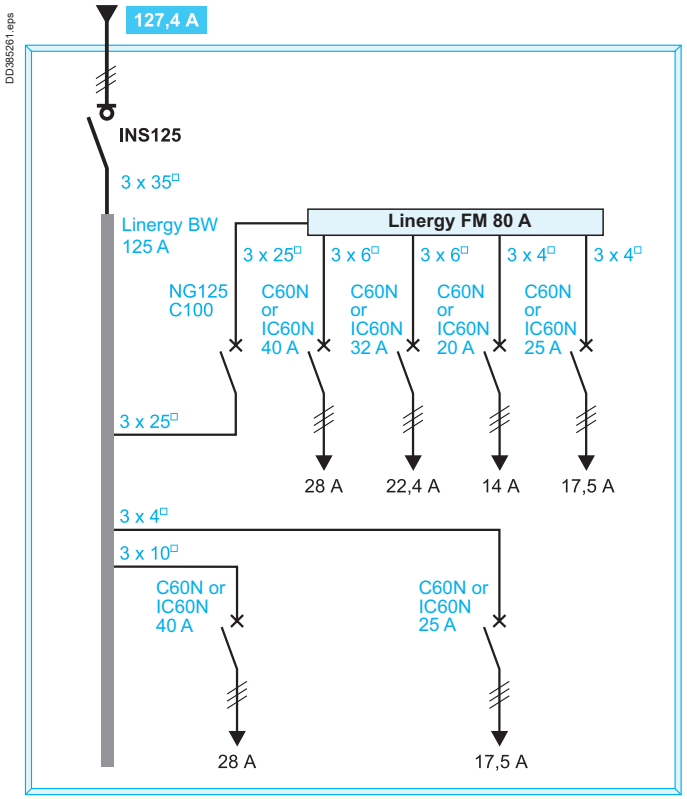
G

Comparative method

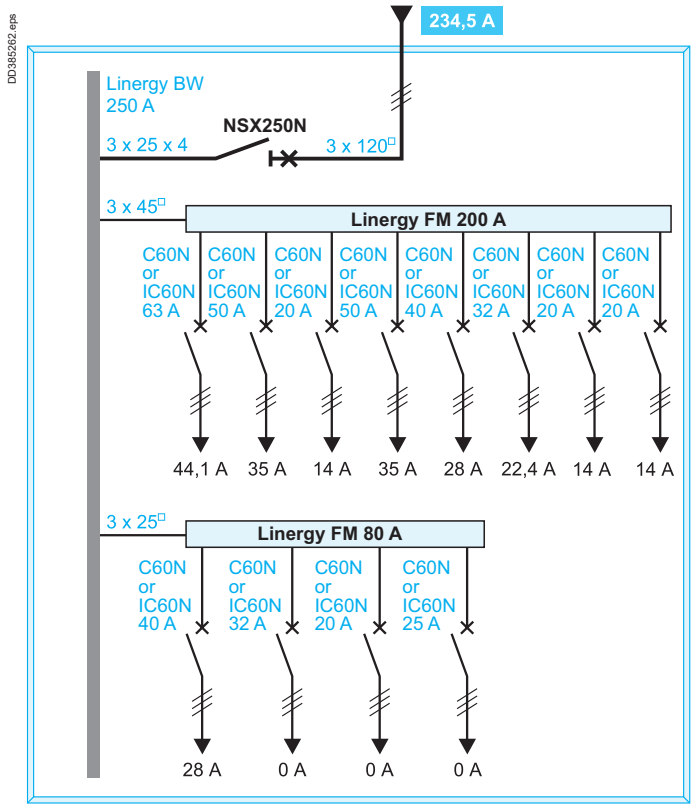
You will have no problems with your switchboard if:

- the volume of the enclosure is greater than that of the tested enclosure with a similar assembly
- the P(W) of the installed assembly is less than the P(W) of the tested configuration in the same size enclosure.

Pack enclosure, 3 rows, IP30
Diversity factor: 0.7
Ambient temperature around the switchboard: 35 °C
P(W) = 95 W



Wall-mounted enclosure, 23 modules, IP30/IP4X
Diversity factor: 0.7
Ambient temperature around the switchboard: 35 °C
P(W) = 170 W

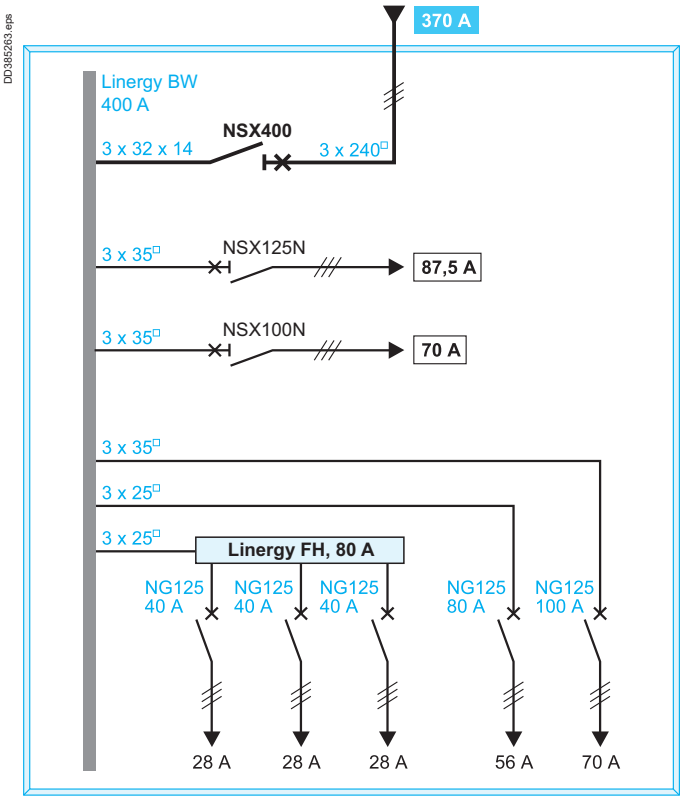


Comparative method

You will have no problems with your switchboard if:

- the volume of the enclosure is greater than that of the tested enclosure with a similar assembly
- the P(W) of the installed assembly is less than the P(W) of the tested configuration in the same size enclosure.

Wall-mounted enclosure, 23 modules, plain door, IP30/IP4X
Diversity factor: 0.7
Ambient temperature around the switchboard: 35 °C
P(W) = 200 W



Floor-standing enclosure, 33 modules, IP30/IP4X
Diversity factor: 0.7
Ambient temperature around the switchboard: 35 °C
P(W) = 270 W

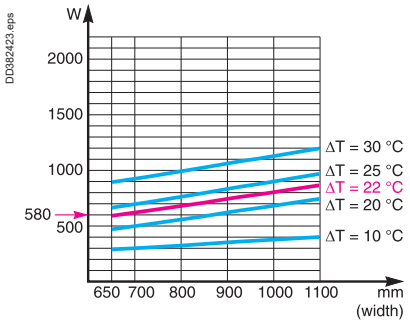
Thermal management of switchboards
Example

Thermal characteristics

Once the dissipated power of the devices has been determined and the enclosure with its IP selected, transfer the results (sum of the dissipated power and width of the device zone) to the chart corresponding to the enclosure IP.



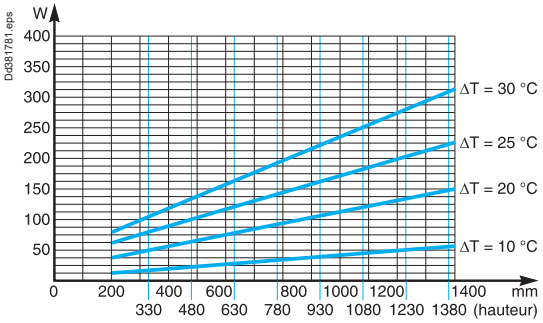
Draw a line parallel to the others on the chart and read the corresponding difference in temperature.
For the given example, the heat rise is 22 °C at mid-height in the enclosure.
The internal temperature = external temperature + heat rise
= 35 °C + 22 °C = 57 °C
57 °C < 60 °C stipulated by the standard, i.e. the result is acceptable for an IP30/IP4X all-mounted and floor-standing enclosures.
This gives roughly:
Internal temperature = 60 °C at mid-height in the enclosure for a low IP value.
= 70 °C at mid-height in the enclosure for a high IP value.

Thermal characteristics

Quick calculation charts for internal temperatures

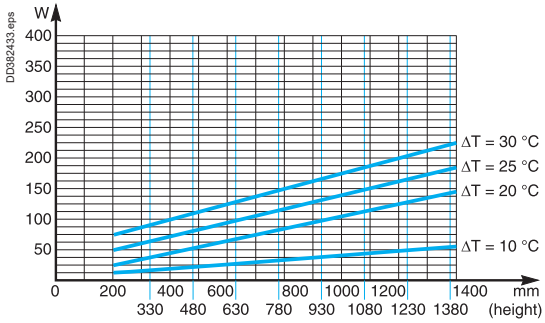
The indicated internal heat rise is that measured at mid-height in the enclosure.

IP3X wall-mounted enclosure



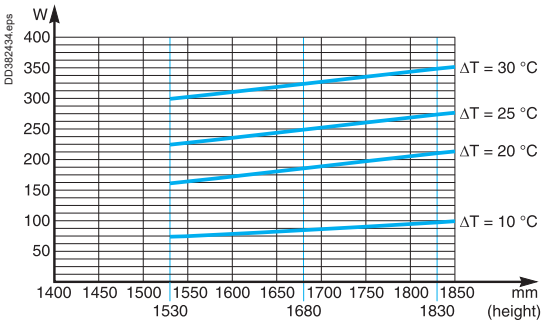
Test conditions:
600 mm wide enclosure mounted directly on wall without fixing lugs.

IP43 wall-mounted enclosure



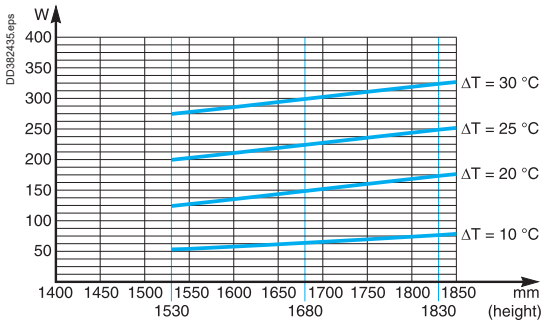
Test conditions:
600 mm wide enclosure mounted directly on wall without fixing lugs.

IP3X floor-standing enclosure



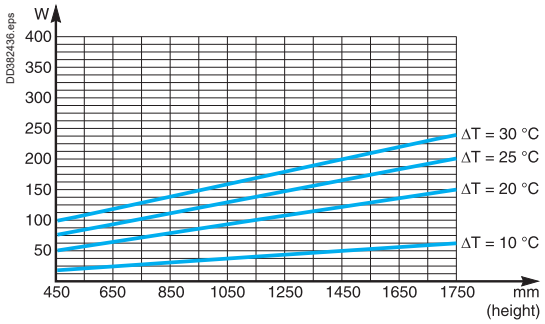
Test conditions:
600 mm wide enclosure on floor against a wall.

IP43 floor-standing enclosure



Test conditions:
Mounted on wall with fixing lugs or on mounting uprights.

IP55 wall-mounted and floor-standing enclosures



Test conditions:
600 mm wide enclosure mounted directly on wall without fixing lugs or mounting uprights.

G

Switchboard ventilation

The air enters the lower section via the fans and exits the upper section:
- through a ventilated roof
- or through a ventilation opening.

The air throughput of the fans is determined by the equation:

$$D = 3{,}1 \times \left(\frac{P}{\Delta T} - KS\right)$$

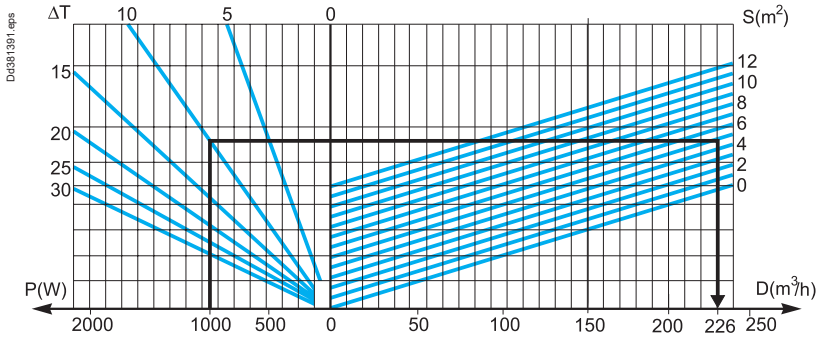
The chart below can be used to determine the necessary throughput, based on the dissipated power, the difference in temperature (internal - external) and the exposed surface area of the enclosure.

Example

Consider an IP3X cubicle, 650 mm wide and 400 mm deep, containing components (devices, connections, busbars, etc.) dissipating 1000 W.
The ambient temperature around the cubicle is 50 °C.
Given that the average temperature at mid-height should not exceed 60 °C, the difference in temperature ΔT is equal to 60 - 50 = 10 °C.
The exposed surface of the cubicle (non adjacent to a wall or other cubicle) is 4.46 m².
(back = 1.3 m², front = 1.3 m², roof = 0.26 m², side panels = 1.6 m²).
What is the necessary throughput of the ventilation system?
The throughput can be calculated as:

$$D = 3{,}1 \times \left(\frac{1000}{10} - 5{,}5 \times 4{,}46\right)$$

D = 234 m³/h.
In the range of Prisma**SeT** accessories, select a system with a throughput of 300 m³/h.



Calculation data

P : power dissipated by the devices, connections and busbars (in Watts)
P_r : power of the heating resistor (in Watts)
T_m : maximum internal temperature in the device zone (in °C)
T_i : average internal temperature (in °C)
T_e : average external temperature (in °C)
$\Delta T_m = T_m - T_e$
$\Delta T = T_i - T_e$
S : total free surface area of the enclosure (expressed in m²)
K : thermal-conduction coefficient of the material (W/m² °C)
K = 5.5 W/m² °C for painted sheet metal
D : ventilation throughput (in m³/h)

Note: the dissipated power of each device is provided by the manufacturer. Add approximately 30 % to account for the connections and the busbars.

Thermal characteristics

Switchboard heating

The heating resistor, placed in the bottom of the switchboard, maintains the internal temperature 10 °C higher than the external temperature.
When the switchboard is not in operation, the heater compensates the dissipated power normally emitted by the switchboard.
The power of the heating resistor is calculated:

- using the equation: Pr = (ΔT x S x K) - P
- or using the charts below, based on the exposed surface area of the enclosure and the desired difference in temperature.

Chart to determine the heating resistor for small wall-mounted enclosures (exposed surfaces ≤ 1 m²)

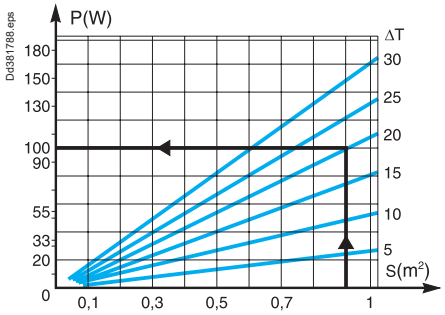


Chart to determine the heating resistor for all types of enclosures

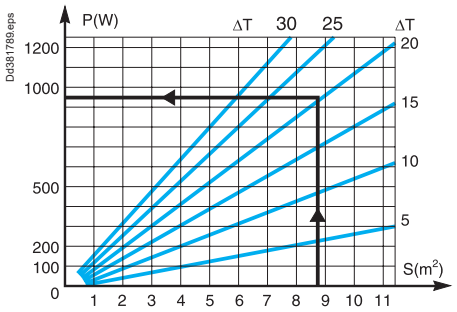

Calculation data

P : power dissipated by the devices, connections and busbars (in Watts)
P_r : power of the heating resistor (in Watts)
T_m : maximum internal temperature in the device zone (in °C)
T_i : average internal temperature (in °C)
T_e : average external temperature (in °C)
$\Delta T_m = T_m - T_e$
$\Delta T = T_i - T_e$
S : total free surface area of the enclosure (expressed in m²)
K : thermal-conduction coefficient of the material (W/m² °C)
K = 5.5 W/m² °C for painted sheet metal
D : ventilation throughput (in m³/h)

Note: the dissipated power of each device is provided by the manufacturer. Add approximately 30 % to account for the connections and the busbars.
