

Assembled locally. Backed by experts. Ready for your next project.

FlexSeT™: innovative low-voltage switchboards available through your local distributor

FlexSeT switchboards are assembled locally by distributors, giving contractors a faster and more reliable way to power their projects. Each section is delivered to your job site to help crews install quickly and keep schedules moving. FlexSeT delivers clean aesthetics, rugged durability, and the confidence that comes from trusted expertise. Backed by Schneider Electric's engineering, innovation, and product quality, it's an ideal solution for commercial, warehouse, education, retail, and EV charging applications.

### Key advantages that drive project success

#### Peace of mind powered by local distribution:

FlexSeT is assembled and supported by local distributors to give you immediate access to expertise, faster response times, and the confidence that comes with a trusted partner close to the job site.

#### Ease of installation:

Each switchboard section is delivered with a bus bridge prepared for splicing on the job site. This reduces on-site complexity and helps electrical contractors work faster and more efficiently.

#### Reliability without compromise:

UL 891 listed and available with MMS or ERMS arc energy reduction solutions to meet NEC 240.87. FlexSeT delivers enhanced safety and dependable operation across its entire lifecycle, giving contractors and building owners long-term peace of mind.

#### Versatile application range:

Ideal for projects requiring ratings up to 2000 A, 480 V, and 65 kAIC.

### Which switchboard solution is right for your customer?

Selecting the right product for each application helps ensure optimal cost efficiency, appropriate technical capabilities, and competitive pricing for each unique project.

#### FlexSeT

Ideal for service entrance equipment for low complexity opportunities

Up to 2000 A, 480 V, 65 kAIC; left incoming feed only

EUSERC utility application only

Color: Signal White (RAL 9003)

#### QED-2

Ideal to meet the needs of large power distribution or complex opportunities

Up to 5000 A, 600 V, 200 kAIC; various incoming options

Multiple utility applications

Color: Medium Light Gray (ANSI #49)

**Instrumentation compartment:** simplified wiring harness makes plug-n-play metering and monitoring accessories easy to install and add. Swingable compartment improves access to wiring for installation.

Note: Instrument compartment not available in Canada.

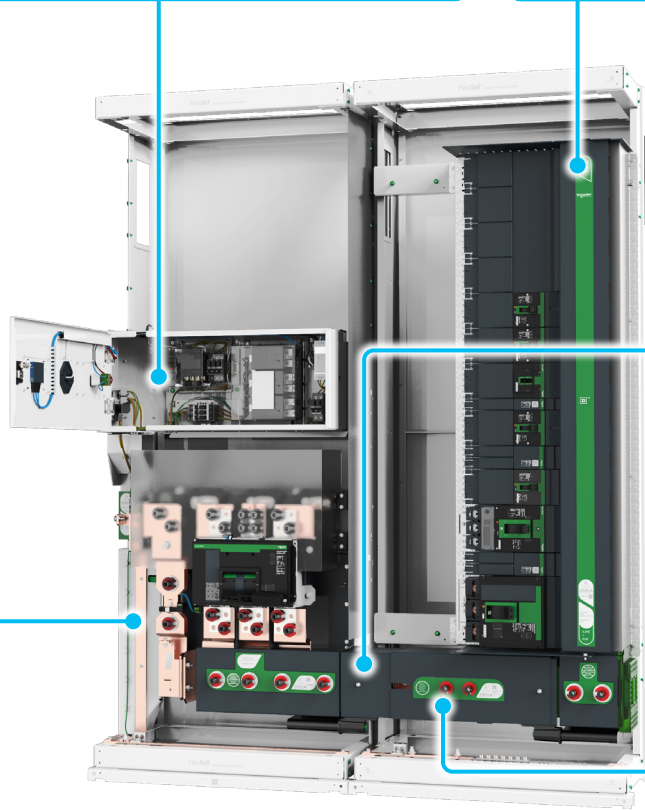

**Neutral bus:** 4 bar I-Line™ distribution stack allows for use of PoN (Plug-on Neutral). PoN delivers a clean installation and easy modification by simplifying wiring for load side neutral connections.

**Swing-out main:**

provides unprecedented ease of access for wiring during installation. Reduces time by providing unobstructed access to terminal points.

**Through bus section for**

**“splicing”:** field-installable bus bridge makes connecting sections a breeze with our patented I-Line™ bus joint and Visi-Tite connections.

**Visual torque indication:**

Visi-Tite™ bolts ensures proper torque validation and improves reliability. Red flag break indicates correct torque value.

Perfect for projects in:

- **Temporary power:** Quick local availability for site power that also can be used for downstream distribution
- **Education:** K–12 schools and administration facilities
- **Retail:** Stores, shopping centers, restaurants
- **Commercial buildings:** Office spaces, mixed-use developments
- **Warehouse:** Distribution centers, storage facilities
- **eMobility:** EV charging stations

The FlexSeT switchboard combines advanced technology with practical design to solve your most pressing project challenges. It’s available in both NEMA 1 and NEMA 3R configurations and now features ERMS for enhanced protection.

Contact your local Schneider Electric distributor to learn how FlexSeT can solve your electrical distribution challenges.
