

Sustain Your Andover Continuum System's Future-Ready Status

You made the best decision for your facility by investing in Schneider Electric and the powerful Andover Continuum system to operate your building systems at peak performance and ensure comfortable, productive environments for your occupants.

As you face tough competitive business and market conditions, keeping pace with smart building trends like the Internet of Things (IoT) doesn't have to be one of them. Schneider Electric has a planned modernization path, to protect your existing investment and incrementally take your Andover Continuum system to the next level. We call this "Transitioning" to a **forward adaptable, backward compatible** EcoStruxure™ Building solution.

By keeping your building future-ready, and moving toward EcoStruxure™ Building solution, you can leverage the benefits of Schneider Electric's premier building management system, including:

- **new network technology** bridges IT and OT with a resilient end-to-end IP architecture plus includes enhanced cybersecurity and integration methods (native open protocol and web services)
- **new user experience** with stunning scalable vector graphics, personalized workspaces, out-of-the-box dashboards, and a responsive web experience on any device
- **new features** with connectivity across entire building ecosystem enable proactive analytics-driven service delivery and a more robust solution including energy, lighting, HVAC and security systems

Stepwise Approach

Retain existing site investment. Gain new functionality to deliver a future IoT-ready Building Management System.

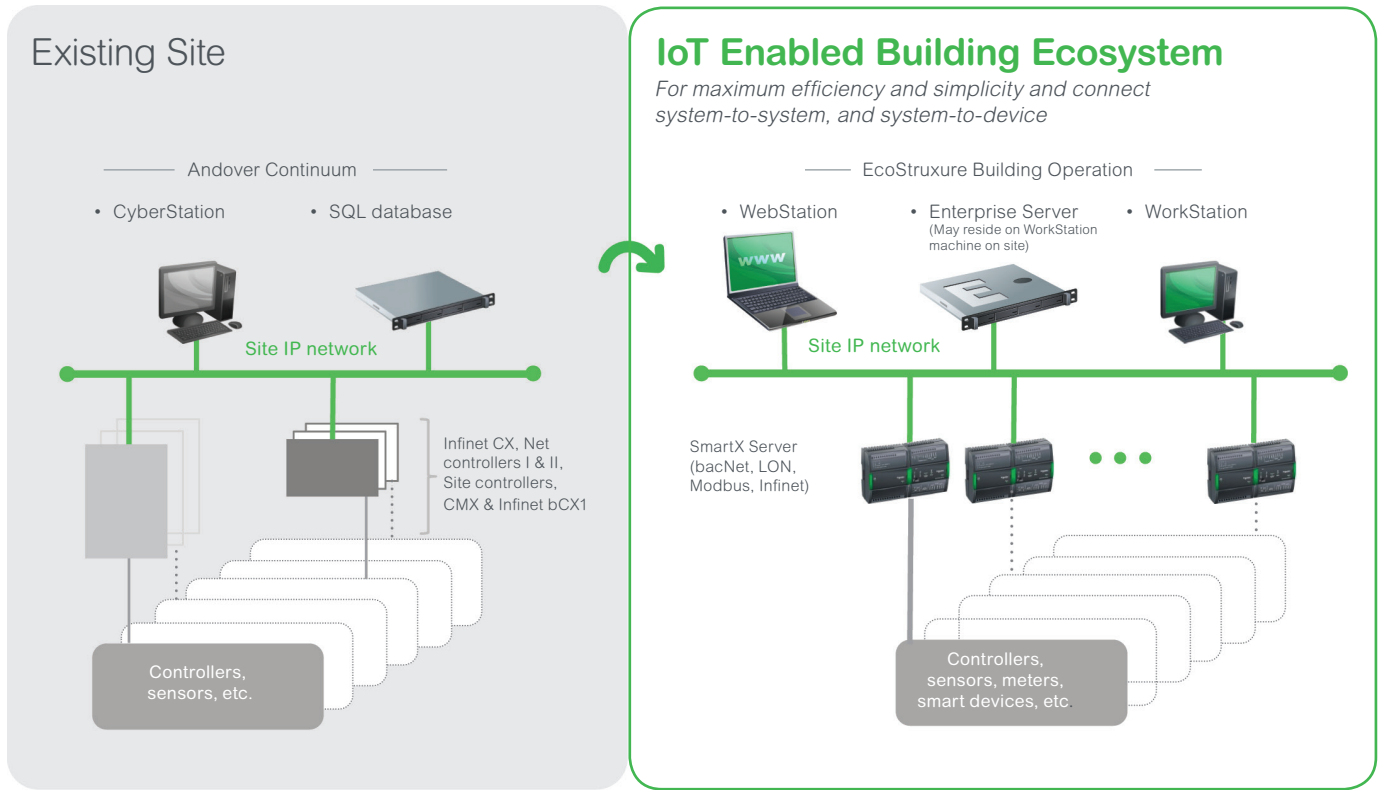

1. Your experienced Schneider Electric Service representative will assess your current systems functionality and plan the best method to modernize your system
2. Take your system to the next level by replacing older devices with IoT enabled devices to enhance performance and reliability
3. Upgrade system firmware and PC to the latest versions for a more robust operating environment

Future-Ready Modernization

Andover Continuum System Upgrade to EcoStruxure™ Building

Upgrading to EcoStruxure™ Building allows you to gain new functionality only found in EcoStruxure™ Building Operation to deliver a future IoT-ready BMS.

EcoStruxure Building lets you go beyond HVAC to address the entire building ecosystem

- Merge OT and IT for maximum efficiency and simplicity
- Connect system-to-system, and system-to-device

Ensure your systems are ready for the future

- The latest technology provides better and faster performance, increased cybersecurity, cloud and predictive services, and helps turn building data into actionable intelligence
- Take advantage of the latest IP-enabled SmartX servers and controllers

Phased transitions to meet your budget needs

- A Schneider Electric representative will work with you to plan your upgrade with a phased approach that best fits with your budget needs.
- Leverage your existing infrastructure investment to minimize your risk, cost and system downtime during transition to EcoStruxure Building Operation

Access to Digital Service Offers

- Easy integration with aFDD (automated fault detection and diagnostics), performance monitoring and remote alarms
- Building Advisor service plans with condition-based maintenance, scheduled visits, remote repairs and direct access to technical experts
- Smart alarms with analytics; monitor changing operating requirements to evaluate comfort, energy and maintenance data
- Automated backups and remote issue resolution; preserve your building management system data in the cloud

Expand integration

- Energy Expert, AccessXpert, Security Expert, Building Advisor, etc.

Contact your local Schneider Electric representative to get started.
