

Reinforce the safety of a home

Customer's needs

The owner of the house wishes to reinforce the safety of his home during his periods of absence.

Recommendation

Use a programmable time switch offering an easy to access presence simulation function. Presence simulation allows, in a fully random manner, control of part of indoor or outdoor lighting or of any other electrical device connected to the product, so as to simulate presence of an occupant.

+ Customer advantages

- Safety is enhanced at lesser cost.
- A large number of functions are available in a limited space.
- Its compact dimensions (18 mm).

Product advantages

- Only 4 keys to create, check, modify or delete the program.
- The program can be overridden temporary or permanently by pressing 2 keys.
- 56 switching operations to offer large programming capacities.
- Automatic summer time/winter time switching.
- Screwless terminals for easy and fast connection.
