Molded-case circuit breakers and
switch-disconnectors from 16 to 630A

Green Premium™

An industry leading portfolio of offers delivering sustainable value

More than 75% of our product sales offer superior transparency on the material content, regulatory information and environmental impact of our products:

- RoHS compliance
- REACH substance information
- Industry leading # of PEP's*
- Circularity instructions

Discover what we mean by green
Check your products!

The Green Premium program stands for our commitment to deliver customer valued sustainable performance. It has been upgraded with recognized environmental claims and extended to cover all offers including Products, Services and Solutions.

CO₂ and P&L impact through... Resource Performance

Green Premium brings improved resource efficiency throughout an asset's lifecycle. This includes efficient use of energy and natural resources, along with the minimization of CO₂ emissions.

Cost of ownership optimization through... Circular Performance

We're helping our customers optimize the total cost of ownership of their assets. To do this, we provide IoT-enabled solutions, as well as upgrade, repair, retrofit, and remanufacture services.

Peace of mind through... Well-being Performance

Green Premium products are RoHS and REACH compliant. We're going beyond regulatory compliance with step-by-step substitution of certain materials and substances from our products.

Improved sales through... Differentiation

Green Premium delivers strong value propositions through third-party labels and services. By collaborating with third-party organizations we can support our customers in meeting their sustainability goals such as green building certifications.

*PEP: Product Environmental Profile (i.e. Environmental Product Declaration)

EasyPact CVS is...Safe

Isolation

- EasyPact CVS circuit breakers are suitable for Isolation as defined in IEC standards 60947-2. The aim of isolation is to separate a circuit or apparatus from the remainder of a system which is energized in order that personnel may carry out work on the isolated part in perfect safety.
- MCCB locking with external padlocks enables a user to isolate and undertake maintenance with utmost safety.

Locking in OFF position

- Key locks enable to lock the breaker in OFF position ensuring safety and better control on installation.
- It also helps in interlocking multiple circuit breakers in an installation.

Class II front Face

- All EasyPact CVS MCCBs are class II Front face devices, they may be installed through the door of class II switchboards without downgrading the switchboard insulation. Installation requires no special operation, even when the Circuit Breaker is equipped with a rotary handle.

Class II panel with circuit breaker having a class II front face

EasyPact CVS is...Reliable

Conforms to IEC 60947-2 for circuit breaker

- Tested at renown international laboratories like KEMA
- Complete range* with $I_{cs} = 100\% I_{cu}$

Fault current limitation technology

- EasyPact CVS Double break mechanism ensures high fault current limitation
 - @ Reduces thermal stresses on the electrical distribution network
 - @ Increases the life of cables and installation

High electrical & Mechanical endurance

- 30000 mechanical operations for 100A
- 12000 electrical operations for 100A

Current limitation technology

Reliable accessories

- Continuous rated shunt coils
- Multifunctional Aux./Alarm contact
- Unique electrical fault trip indication (SDE)

EasyPact CVS offer protection for human as well as Electrical installation

- Earth leakage protection through Vigi Module to protect human against leakage current

* except CVS100BS

EasyPact CVS is...Simple

Only two frame sizes*
up to 630A

Frame - I 100 - 250A
Frame - II 400 - 630A

- Common and snap-fit accessories up to 630A
- Single OF contact for ON/OFF, Trip indication
- Single Shunt coil for remote tripping
- Single Under Voltage coil

- EasyPact CVS share same footprint of Compact Family MCCBs.
 - mounting dimensions
 - easy retrofitting
 - system upgradeability

* except CVS100BS

EasyPact CVS Stands for Customer Value

EasyPact CVS 100 to 630 A

Panel builders

- Only two frame sizes up to 630A
- Common accessories for complete range (ON/OFF/Trip Auxiliaries/Shunt/UV etc.)
- Line load reversibility for entire range
- Suitable for class II switchboards

End Users

- Isolation as a standard feature enhances safety
- Excellent current limiting capability reduces stresses on cables, busbars and loads
- Continuous rated accessories increase system reliability
- Modular earth leakage protection ensure human/installation protection

OEMs

- High endurance and maintenance-free operation assure continuous performance of machines
- Unique common accessories help standardisation of components

Contractors

- Sufficient pole pitch helps to terminate Copper and Aluminum busbars or cables
- Easy availability of the product due to a small number of frame size
- Designed to perform in demanding applications

- > Do you strain to find circuit breakers that are simple as well as flexible and safe?
- > Has it been difficult to find high quality circuit breakers at the right price point?
- > Do you need the reach, support and accessibility of a global leader, with the value of a local supplier?

Standardised characteristics indicated on the rating plate:

1. Type of device: frame size and breaking capacity class
2. Ui: rated insulation voltage.
3. Uimp: rated impulse withstand voltage.
4. Ics: service breaking capacity.
5. Icu: ultimate breaking capacity for various values of the rated operational voltage Ue
6. Ue: operational voltage.
7. Suitable for Isolation symbol.
8. Reference standard.

Note: when the circuit breaker is equipped with an extended rotary handle, the door must be opened to access the rating plate.

Compliance With Standards

EasyPact CVS circuit breakers and auxiliaries comply with the following international recommendations:

- IEC 60947-1: general rules
- IEC 60947-2: circuit breakers
- IEC 60947-3: switch-disconnectors

Pollution Degree

EasyPact CVS circuit breakers are certified for operation in pollution-degree III environments as defined by IEC standards 60947-1 and 60664-1 (industrial environments).

Climatic Withstand

EasyPact CVS circuit breakers have successfully passed the tests defined by the following standards for extreme atmospheric conditions:

- IEC 60068-2-1: dry cold (-55°C)
- IEC 60068-2-2: dry heat (+85°C)
- IEC 60068-2-30: damp heat (95 % relative humidity at 55°C)
- IEC 60068-2-52 severity level 2: salt mist

Environment

EasyPact CVS respects the European environment directive EC/2002/95 concerning the restriction of hazardous substances (RoHS). All EasyPact CVS production sites have set up an ISO 14001 certified environmental management system.

Ambient Temperature

- EasyPact CVS circuit breakers can be used between -25°C and +70°C. For temperatures higher than 50°C (65°C for circuit breakers used to protect motor feeders), devices must be derated ([see page B-2](#)).
- Circuit breakers should be put into service under normal ambient, operating-temperature conditions. Exceptionally, the circuit breaker can be put into service when the ambient temperature is between -35°C and -25°C.
- The permissible storage-temperature range for EasyPact CVS circuit breakers in the original packing is -50°C and +85°C.

Electromagnetic compatibility

EasyPact CVS circuit breakers with ETS 2.2/2.3 electronic trip unit have successfully passed the tests defined by the following standards for EMC:

- IEC/EN 60947-2, Annex F: Immunity tests for circuit breakers with electronic protection

EasyPact CVS100/160/250/400/630 with terminal shields

EasyPact CVS100/160/250

EasyPact CVS100/160/250 with direct rotary handle

EasyPact CVS100/160/250 with extended rotary handle

EasyPact CVS400 / 630

EasyPact CVS400 / 630 with direct rotary handle

EasyPact CVS400/630 with extended rotary handle

Suitable for Isolation With Positive Contact Indication

All EasyPact CVS circuit breakers are suitable for isolation as defined in IEC standard 60947-2:

- The isolation position corresponds to the O (OFF) position.
- The operating handle cannot indicate the OFF position unless the contacts are effectively open.
- Padlocks cannot be installed unless the contacts are open.

Installation of a rotary handle does not alter the reliability of the position-indication system.

The isolation function is certified by tests guaranteeing:

- The mechanical reliability of the position-indication system
 - The absence of leakage currents
 - Over voltage withstand capacity between upstream and downstream connections.
- The tripped position does not ensure isolation with positive contact indication. Only the OFF position guarantees isolation.

Installation in Class II Switchboards

All EasyPact CVS circuit breakers are class II front face devices. They can be installed through the door of class II switchboards (as per IEC standards 61140 and 60664-1) without downgrading switchboard insulation. Installation requires no special operations, even when the circuit breaker is equipped with a rotary handle.

Degree of Protection

The following indications are in accordance with standards IEC 60529 (IP degree of protection) and IEC 62262 (IK protection against external mechanical impacts).

Bare circuit breaker with Escutcheon:

- with toggle: IP40, IK07 front face
- with extended rotary handle: IP 54, IK08

Circuit breaker installed in a switchboard:

- with toggle: IP40, IK07 front face
- with extended rotary handle: IP 54, IK08

Protection Degree

Protection degree of the product, according to IEC60259, depends on its configuration:

Colours	Definition
	IP54: front extended rotary handle
	IP40: front cover, side, back, terminal shield, direct rotary handle
	IP20: power connection cover
	maybe IP20 or less depending on the kind of power connections and cable size used

	IP54
	IP40
	IP20
	< IP20

TM-D thermal-magnetic trip units can be used on EasyPact CVS100-630 circuit breakers with performance levels B/F/N/H.

TM-D Thermal-Magnetic Trip Units

Protection

TM-D trip units are used mainly in electrical distribution applications for protection of cables supplied by transformers.

Thermal protection operates according to:

- **I_r** that can be adjusted in amps from 0.7 to 1 times the rating of the trip unit (16 A to 250 A), corresponding to settings from 11 to 250 A for the range of trip units
- a non-adjustable time delay.

Magnetic protection (I_i)

Short-circuit protection with a fixed or adjustable pick-up I_i that initiates instantaneous tripping if exceeded.

- TM-D: fixed pick-up, I_i, for 16 to 250 A ratings and adjustable from 5 to 10 x I_n for 400 A ratings, 4.2 to 8.3 x I_n for 600 A rating, 5 to 10 x I_n for 630 A rating.

Protection versions

- 3-pole:
 - 3P 3D: 3-pole frame (3P) with detection on all 3 poles (3D).
- 4-pole:
 - 4P 4D: 4-pole frame (4P) with detection on all 4 poles (same threshold for phases and neutral).

(1) For temperatures not equal to 50°C, the thermal protection characteristics are modified. See the temperature derating table on page B-2.

Note: All the trip units have a transparent lead-sealable cover that protects access to the adjustment dials.

Protection of Distribution Systems

ETS 2.2/2.3 Electronic Trip Unit and Accessories

ETS 2.2/2.3 electronic trip units can be used on EasyPact CVS100-630 circuit breakers with performance levels B/F/N/H.

ETS 2.2/2.3 Electronic Trip Unit

Circuit breakers equipped with ETS 2.2 (100-250A) / 2.3 (400/630A) trip units can be used to protect distribution systems supplied by transformers.

Protection

Settings are made using the adjustment dials with adjustment possibilities.

Inverse time protection against overloads with an adjustable current pick-up I_r set using a dial and a non-adjustable time delay t_r .

Protection with an adjustable pick-up I_{sd} . Tripping takes place after a very short delay used to allow discrimination with the downstream device.

Instantaneous short-circuit protection with a fixed pick-up.

- On 3-pole circuit breakers, neutral protection is not possible.
- On four-pole circuit breakers, neutral protection may be set using a three-position switch:
 - 4P 3D: neutral unprotected
 - 4P 3D + N/2: neutral protection at half the value of the phase pick-up, i.e. $0.5 \times I_r$
 - 4P 4D: neutral fully protected at I_r

Note: all the trip units have a transparent lead-sealable cover that protects access to the adjustment dials.

(1) If the trip units are used in high-temperature environments, the ETS 2.2/2.3 setting must take into account the thermal limitations of the circuit breaker. See the temperature derating table.

A Vigi module can be added to any three or four-pole CVS100 to 630 circuit breakers to form a Vigi CVS.

Vigi CVS100 to 630

PB103580-36

DB112147

1. Sensitivity setting
2. Time-delay setting (for selective earth-leakage protection).
3. Lead-seal fixture for controlled access to settings.
4. Test button simulating an earth-fault for regular checks on the tripping function
5. Reset button (reset required after earth-fault tripping).
6. Rating plate

Circuit Breaker With Add-on Vigi Module (Vigi CVS)

- For general characteristics of circuit breakers, see pages A-2 and A-3.
- Add-on Vigi modules: Earth-leakage protection is achieved by installing a Vigi module (characteristics and selection criteria on next page) directly on the circuit breaker terminals. It directly actuates the trip unit (magnetic, thermal-magnetic or ETS).

Vigi CVS100 to 630 Circuit Breakers With Earth-Leakage Protection

Addition of the Vigi module does not alter circuit-breaker characteristics:

- compliance with standards
- degree of protection, class II front-face insulation
- positive contact indication
- electrical characteristics
- trip-unit characteristics
- installation and connection modes
- indication, measurement and control auxiliaries
- installation and connection accessories

Time delay	adjustable	adjustable
Intentional delay (ms)	0 - 60 ⁽²⁾ - 150 ⁽²⁾ - 300 ⁽²⁾	0 - 60 - 150 - 300
Max. break time (ms)	< 40 < 150 < 300 < 800	< 40 < 150 < 300 < 800
Rated voltage V AC 50/60 Hz	200... 440	200...440

⁽¹⁾ Vigi 3P modules may also be used on 3P circuit breakers used for two-phase protection.

⁽²⁾ If the sensitivity is set to 30 mA, there is no time delay, whatever the time-delay setting.

Operating Safety

The Vigi module is a user safety device. It must be tested at regular intervals (every 6 months) via the test button.

MA magnetic Trip Units for EasyPact CVS100-630A

DE4400006

Circuit breakers with an MA trip unit are combined with a thermal relay and a contactor or a starter.

Protection

Short-circuit protection with an adjustable pick-up I_i that initiates instantaneous tripping if exceeded.

■ $I_i = I_n \times \dots$ is set on an adjustment dial in multiples of the rating:

- 6 to 14 x I_n (2.5 to 100 A ratings)
- 9 to 14 x I_n (150 to 220 A ratings)
- 6 to 13 x I_n (320 to 500 A ratings)

Protection version

- 3-pole (3P 3D): 3-pole frame (3P) equipped with detection on all 3 poles (3D).

Motor Protection up to 250 kW

Motor Protection Rating (kW)

CVS400/630	6...13 x I_n

Functions and Characteristics

Installation standards require upstream protection. However, **EasyPact CVS100 to 630 NA** switch-disconnectors are self-protected by their high-set magnetic release.

Insulation accessories

Connection

Electrical auxiliaries

Monitoring and Safety

Control accessories

CVS circuit breakers may be installed horizontally, vertically or flat on their back, without derating performance levels.

Fixed Circuit Breakers

Fixed circuit breakers are designed for standard connection using bars or cables with lugs. Bare-cable connectors are available for connection to bare copper or aluminium cables.

Mounting on a backplate.

Mounting on rails.

Mounting on DIN rail (with adaptor).

Mounting on a Prisma mounting plate.

The same accessories as for fixed devices may be used

Four positions.

Two lengths.

Bars or Cables With Lugs

The plug-in base is equipped with terminals which, depending on their orientation, serve for front and rear connection.

For rear connection of a base mounted on a backplate, the terminals must be replaced

by insulated, long right-angle terminal extensions.

For EasyPact CVS630 devices, connection most often requires the 52.5 or 70 mm pitch spreaders.

Front connection.

Front connection with spreaders.

Rear connection of a base mounted on a backplate.

Connection Accessories

All accessories for fixed devices (bars, lugs, terminal extensions and spreaders) maybe used with the plug-in base.

Bare Cables

All terminals may be equipped with bare-cable connectors. See the "Connection of fixed devices" section.

With a 100 to 250 A base.

With a 400/630 A base.

Adapter for Plug-in Base

The adapter is a plastic component for the 100 to 250 base and the 400/630 base that enables use of all the connection accessories of the fixed device.

It is required for interphase barriers and the long and short terminal shields.

Adapter for 100 to 250 A - 3P base.
Connection with bars or cables with lugs.

Adapter for 400/630 A - 4P base.
Connection with spreaders and interphase barriers.

Terminal shields are identical for fixed and plug-in versions and cover all applications up to 1000 V. They exist for the 100 to 250 A and 400/630 A ratings, in long and short versions.

Long terminal shields.

Short terminal shields.

1. Partially cut removable squares
2. Grids with break marks.

1. Partially cut removable squares
2. Grids with break marks.

1. Partially cut removable squares
2. Grids with break marks.

Rear insulating screens.

Terminal Shields

Insulating accessories used for protection against direct contact with power circuits. They provide IP40 degree of protection and IK07 mechanical impact protection.

Terminal-Shield Types

EasyPact CVS100 to 250 and CVS400/630 3P or 4P can be equipped with:

- short terminal shields
- long terminal shields.

All terminal shields have holes or knock-outs in front for voltage-presence indicators.

Short Terminal Shields

They are used with:

- plug-in version in all connection configurations
- fixed version with rear connection.

Long Terminal Shields

They are used for front connection with cables or insulated bars.

They comprise two parts assembled with captive screws, forming an IP40 cover.

- The top part is equipped with sliding grids with break marks for precise adaptation to cables or insulated bars.
- The rear part completely blocks off the connection zone. Partially cut squares can be removed to adapt to all types of connection for cables with lugs or copper bars.

Long terminal shields may be mounted upstream and downstream of:

- Fixed devices
- The base of plug-in version, thus completing the insulation provided by the mandatory short terminal shields on the device
- The one-piece spreader for CVS100 to 250
- The 52.5 mm spreaders for CVS400/630.

Terminal Shields and Pitch

Combination possibilities are shown below.

Circuit Breaker	CVS100 to 250	CVS400/630	
Short terminal shields			
Pitch (mm)	35	45	
Long terminal shields			
Pitch (mm)	35	45	52.5

Interphase Barriers

Safety accessories for maximum insulation at the power-connection points:

- they clip easily onto the circuit breaker
- single version for fixed devices and adapters on plug-in bases
- not compatible with terminal shields
- the adapter for the plug-in base is required for mounting on plug-in version.

Rear Insulating Screens

Safety accessories providing insulation at the rear of the device.

Their use is mandatory for devices with spreaders, installed on backplates, when terminal shields are not used.

The available screen dimensions are shown below.

Circuit Breaker	CVS100 to 250	CVS400/630
3P W x H x thickness (mm)	140 x 105 x 1	203 x 175 x 1.5
4P W x H x thickness (mm)	175 x 105 x 1	275 x 175 x 1.5

Fixed circuit breakers are designed for standard front connection using bars or cables with lugs. Cable connectors are available for bare cables. Rear connection is also possible.

Front Connection

Standard Terminals

EasyPact CVS100 to 630 come with terminals comprising snap-in nuts with screws:

- EasyPact CVS100: M6 nuts and screws
- EasyPact CVS160/250: M8 nuts and screws
- EasyPact CVS400/630: M10 nuts and screws

These terminals may be used for:

- direct connection of insulated bars or cables with lugs
- terminal extensions

Interphase barriers or terminal shields are recommended. They are mandatory for certain connection accessories (in which case the interphase barriers are provided).

Bars

When the switchboard configuration has not been tested, insulated bars are mandatory.

Maximum Size of Bars

EasyPact CVS Circuit Breaker		100 to 250	400/630
Without spreaders	pitch (mm)	35	45
	maximum bar size (mm)	20 x 3	32 x 8
With spreaders	pitch (mm)	45	52.5
	maximum bar size (mm)	32 x 2	40 x 6

Crimp Lugs

There are two modules of lugs, for aluminium and copper cables.

Interphase barriers or long terminal shields must be used with narrow lugs. The lugs are supplied with interphase barriers.

EasyPact CVS Circuit Breaker		100 to 250	400/630
Copper cables	size (mm ²)	150, 185	240, 300
	crimping	hexagonal barrels or punching	
Aluminium cables	size (mm ²)	150, 185	240, 300
	crimping	hexagonal barrels	

Terminal Extensions

Extensions with anti-rotation ribs can be attached to the standard terminals to provide numerous connection possibilities in little space:

- Straight terminal extensions
- Right-angle terminal extensions

Spreaders

Spreaders may be used to increase the pitch:

- CVS100 to 250: the 35 mm pitch can be increased to 45 mm
 - CVS400/630: the 45 mm pitch can be increased to 52 or 70 mm
- Bars, cable lugs or cable connectors can be attached to the ends.

Pitch (mm) Depending on the Type of Spreader

EasyPact CVS Circuit Breaker	CVS100 to 250	CVS400/630
Without spreaders	35	45
With spreaders	45	52.5 or 70

Bare-cable connectors may be used for both copper and aluminium cables.

1-cable connectors for EasyPact CVS100 to 250

The connectors snap directly on to the device terminals or are secured by clips to right-angle and straight terminal extensions as well as spreaders.

1-cable connectors for EasyPact CVS400 to 630

The connectors are screwed directly to the device terminals.

2-cable connectors for EasyPact CVS100 to 250 and 400/630

The connectors are screwed to device terminals or right-angle terminal extensions.

Maximum Size of Cables Depending on the Type of Connector

EasyPact CVS circuit breaker		100/160	250	400	630
Steel connectors	1.5 to 95 mm ²	■			
Aluminium connectors	25 to 95 mm ²	■	■		
	120 to 185 mm ²	■	■		
	2 cables 50 to 120 mm ²	■	■		
	2 cables 35 to 240 mm ²			■	■
	35 to 300 mm ²			■	■

Rear Connection

Device mounting on a backplate with suitable holes enables rear connection. Rear connections for bars or cables with lugs are available in two lengths. Bars may be positioned flat, on edge or at 45° angles depending on how the rear connections are positioned.

The rear connections are simply fitted to the device connection terminals. All combinations of rear connection lengths and positions are possible on a given device.

DB115693

EasyPact CVS100/160/250

Standard

All EasyPact CVS100/160/250 circuit breakers and switch-disconnectors have slots for the electrical auxiliaries listed below.

5 indication contacts

- 2 ON/OFF (OF1 and OF2)
- 1 trip indication (SD)
- 1 fault-trip indication (SDE)
- 1 earth-fault indication (SDV), when the device is equipped with a Vigi module.

1 remote-tripping release

- either 1 MN undervoltage release
- or 1 MX shunt release

All these auxiliaries can be installed with a rotary handle.

DB115590

EasyPact CVS400/630

Standard

All EasyPact CVS400/630 circuit breakers and switch-disconnectors have slots for the electrical auxiliaries listed below.

6 indication contacts

- 3 ON/OFF (OF3)
- 1 trip indication (SD)
- 1 fault-trip indication (SDE)
- 1 earth-fault indication (SDV), when the device is equipped with a Vigi module.

1 remote-tripping release

- either 1 MN undervoltage release
- or 1 MX shunt release.

All these auxiliaries can be installed with a rotary handle.

The illustration shown (TMD, MA, NA and ETS standard) indicates auxiliary possibilities depending on the type of trip unit.

One contact model provides circuit-breaker status indications (OF - SD - SDE - SDV).

These common-point changeover contacts provide remote circuit-breaker status information.

They can be used for indications, electrical locking, relaying, etc. They comply with the IEC 60947-5 international recommendation.

Functions

Breaker-status indications, during normal operation or after a fault

A single type of contact provides all the different indication functions:

- OF (ON/OFF) indicates the position of the circuit breaker contacts
- SD (trip indication) indicates that the circuit breaker has tripped due to:
 - an overload
 - a short-circuit
 - an earth fault (Vigi)
 - operation of a voltage release
 - operation of the “push to trip” button
 - disconnection when the device is ON.

The SD contact returns to de-energised state when the circuit breaker is reset.

- SDE (fault-trip indication) indicates that the circuit breaker has tripped due to:
 - an overload
 - a short-circuit
 - an earth fault (Vigi)

- SDV indicates that the circuit breaker has tripped due to an earth fault. It returns de-energised state when the Vigi module is reset.

Installation

- OF, SD, SDE and SDV functions: a single type of contact provides all these different indication functions, depending on where it is inserted in the device. The contacts clip into slots behind the front cover of the circuit breaker (or the Vigi module for the SDV function).

The SDE function on a CVS100 - 630 A equipped with a magnetic, thermal-magnetic or ETS 2 trip unit requires the SDE adaptor.

DB125549

Indication Contacts

Contacts		Standard				Low level			
Types of contacts		All				OF, SD, SDE, SDV			
Rated thermal current (A)		6				5			
Minimum load		100 mA at 24 V DC				1 mA at 4 V DC			
Utilisation cat. (IEC 60947-5-1)		AC12	AC15	DC12	DC14	AC12	AC15	DC12	DC14
Operational current (A)	24 V AC/DC	6	6	6	1	5	3	5	1
	48 V AC/DC	6	6	2.5	0.2	5	3	2.5	0.2
	110 V AC/DC	6	5	0.6	0.05	5	2.5	0.6	0.05
	220/240 V AC	6	4	-	-	5	2	-	-
	250 V DC	-	-	0.3	0.03	5	-	0.3	0.03
380/440 V AC	6	2	-	-	5	1.5	-	-	

DB115650

MX or MN voltage release.

DB115605

Opening conditions of the MN release.

DB115606

Closing conditions of the MN release.

PB103752-32

MN release with a time-delay unit.

DB115607

Wiring diagram for emergency-off function with MN + time-delay unit.

DB115608

Opening conditions of the MX release.

- This release trips the circuit breaker when the control voltage drops below a tripping threshold.
- The tripping threshold is between 0.35 and 0.7 times the rated voltage.
- Circuit breaker closing is possible only if the voltage exceeds 0.85 times the rated voltage.

Characteristics

Power supply	V AC	50/60 Hz: 24 - 48 - 100/130 - 200/240 50 Hz: 380/415 60 Hz: 208/277
	V DC	12 - 24 - 30 - 48 - 60 - 125 -250
Operating threshold	Opening	0.35 to 0.7 Un
	Closing	0.85 Un
Operating range		0.85 to 1.1 Un
Consumption (VA or W)		Pick-up: 10 - Hold: 5
Response time (ms)		50

Time-delay unit for an MN release

A time delay unit for the MN release eliminates the risk of nuisance tripping due to a transient voltage dip lasting ≤ 200 ms. For shorter micro-outages, a system of capacitors provides temporary supply to the MN at $U > 0.7$ to ensure no tripping. The correspondence between MN releases and time-delay units is shown below.

Power Supply	Corresponding MN Release
Unit with fixed delay 200 ms	
48 V AC	48 V DC
220 / 240 V AC	250 V DC
Unit with adjustable delay (0.5s, 0.9s, 1.5s, 3s)	
48 - 60 V AC/DC	48 V DC
100 - 130 V AC/DC	125 V DC
220 - 250 V AC/DC	250 V DC

The MX release opens the circuit breaker via an impulse-type (≥ 20 ms) or maintained order.

Opening conditions

When the MX release is supplied, it automatically opens the circuit breaker. Opening is ensured for a voltage $U \geq 0.7 \times U_n$.

Characteristics

Power supply	V AC	50/60 Hz: 24 - 48 - 100/130 - 200/240 50 Hz: 380/415 60 Hz: 208/277
	V DC	12 - 24 - 30 - 48 - 60 - 125 -250
Operating range		0.7 to 1.1 Un
Consumption (VA or W)		Pick-up: 10
Response time (ms)		50

When the circuit breaker has been tripped by an MN or MX release, it must be reset before it can be reclosed.

MN or MX tripping takes priority over manual closing.

In the presence of a standing trip order, closing of the contacts, even temporary, is not possible.

Connection using wires up to 1.5mm² to integrated terminal blocks.

Note: circuit breaker opening using an MN or MX release must be reserved for safety functions. This type of tripping increases wear on the opening mechanism. Repeated use reduces the mechanical endurance of the circuit breaker by 50 %.

There are two types of rotary handle:

- direct rotary handle
- extended rotary handle

EasyPact CVS with a rotary handle

EasyPact CVS with an extended rotary handle installed at the back of a switchboard, with the keylock option and key

Direct Rotary Handle

Degree of protection IP40, IK07.

The direct rotary handle maintains:

- visibility of and access to trip-unit settings
- suitability for isolation
- indication of the three positions O (OFF), I (ON) and tripped
- access to the "push to trip" button

Device locking

The rotary handle facilitates circuit-breaker locking.

- Padlocking:
 - standard situation, in the OFF position, using 1 to 3 padlocks, shackle diameter 5 to 8 mm, not supplied

Extended Rotary Handle

Degree of protection IP54, IK08.

The extended rotary handle makes it possible to operate circuit breakers installed at the back of switchboards, from the switchboard front.

It maintains:

- Visibility of and access to trip-unit settings
- Suitability for isolation
- Indication of the three positions O (OFF), I (ON) and tripped

Device and Door Padlocking

Padlocking locks the circuit-breaker handle and disables door opening:

- standard situation, in the OFF position, using 1 to 3 padlocks, shackle diameter 5 to 8 mm, not supplied

Parts of the Extended Rotary Handle

- A unit that replaces the front cover of the circuit breaker (secured by screws)
- An assembly (handle and front plate) on the door that is always secured in the same position, whether the circuit breaker is installed vertically or horizontally
- An extension shaft that must be adjusted to the distance. The min/max distance between the back of circuit breaker and door is:
 - 185...600 mm for EasyPact CVS100 to 250
 - 209...600 mm for EasyPact CVS 400/630

Manual Source-Changeover Systems

Additional accessory interlocks two devices with rotary handle to create a source-changeover system. Closing of one device is possible only if the second is open.

This function is compatible with direct or extended rotary handles.

Up to three padlocks can be used to lock in the OFF or ON position.

EasyPact CVS Motor Mechanism can be used on CVS100-630 circuit breakers / switch disconnectors to achieve remote closing and opening.

When equipped with a motor mechanism module, EasyPact CVS circuit breakers feature very high mechanical endurance as well as easy and reliable operation:

- Remote control via electric signal
- Direct local control on the front panel of the circuit breaker through the manual operating mechanism

Operation

The type of operation is selected using the slide cover for manual/auto mode.

When the switch is in the “auto” position, circuit-breaker ON and OFF is controlled by two impulse-type or maintained signals. Following tripping due to an electrical fault, manual reset is mandatory after fault is cleared.

When the switch is in the “manual” position, circuit-breaker ON and OFF is controlled by the handle.

Installation and Connections

All installation (fixed, plug-in) and connection possibilities are maintained. Motor-mechanism module connections are made behind its front cover to integrated terminals, for cables up to 2.5mm².

Notes: CVS Motor Mechanism is not applicable to IT earthing system.

PowerLogic PowerTag M250 3P

> PowerTag Energy Web

> PowerTag Energy Catalog

PowerTag Energy M250/M630 is a class 1 energy meter, as per IEC 61557-12, that incorporates features required to perform accurate real-time measurements (U, V, I, P, PF) and get energy values up to 250 A or 630 A, depending on the model.

Used together with a gateway or a Panel Server to collect and process the data, the PowerTag Energy M250/M630 provides circuit monitoring and diagnosis down to load level.

The PowerTag Energy M250/M630 is designed for CVS up to 630A for 3P and 3P+N electrical networks.

Thanks to its integrated design, the PowerTag Energy M250/M630 does not require any specific wiring and is compatible with the same connection accessories as the device it is mounted on.

Functions

PowerTag Energy M250/M630 measures the following values in accordance with the IEC 61557-12 standard PMD-II/DD/K70/1:

- Energy (4 quadrants):
 - Active energy (kWh): total and partial, delivered and received
 - Active energy per phase (kWh): total
 - Reactive energy (kVARh): partial, delivered and received
- Real-time measurement values:
 - Voltages (V): phase-to-phase (U12, U23, U31) and phase-to-neutral (V1N, V2N, V3N)
 - Currents (A): per phase (I1, I2, I3)
 - Power:
 - Active power (W): total and per phase
 - Reactive power (VAR): total
 - Apparent power (VA): total
 - Frequency (Hz)
 - Power factor
- Voltage loss alarms:
 - PowerTag Energy sends a voltage loss alarm and the current-per-phase value before being de-energized.
 - At voltage loss, PowerTag Energy adds an overload alarm if the current is higher than the rated current of the associated protective device.

Note: Functions listed above depends on Concentrator/Gateway.

Installation

The module is self-powered and is installed for fixed devices directly on the bottom side of the circuit breaker. For plug-in devices, it has to be installed on the base itself, top or bottom.

PowerTag Energy M250/M630 3P has to be used with 3P devices, and an external neutral voltage tap is provided in case of the installation has a neutral to provide phase-to-neutral voltages, active energy per phase and power per phase.

PowerTag Energy M250/M630 3P+N has to be used with 4P devices.

Important notice : A derating coefficient may apply for the circuit-breaker on which the PowerTag is mounted on. Refer to the temperature derating table.

In case of retrofit, following points have to be checked:

- Clearance to be able to add PowerTag Energy module and to respect bending radius of cables.
- Condition of power connectors: to be replaced if damaged.
- Tightening torques depending on the connector used.

Technical Specifications

EasyPact CVS100BS F-1

When thermal-magnetic trip units are used at ambient temperatures other than 50 °C, the Ir pick-up is modified.

Electronic trip units are not affected by variations in temperature. If the trip units are used in high-temperature environments, the ETS setting must nevertheless take into account the temperature limits of the circuit breaker.

Temperature derating curve for CVS100.

Thermal-protection curve with minimum and maximum values.

Altitude Derating

Altitude does not significantly affect the characteristics of EasyPact CVS circuit breakers up to 2000 m. Above this altitude, it is necessary to take into account the decrease in the dielectric strength and cooling capacity of air.

Altitude (m)	2000	3000	4000	5000
Impulse withstand voltage Uimp (kV)	8	7	6	5.2
Current ratio	1,00	0,96	0,93	0,90
Ui	690	600	520	450
Ue	440	400	400	380

Vibrations

CVS devices resist electromagnetic or mechanical vibrations.

Tests are carried out in compliance with standard IEC 60068-2-6 for the levels required by merchant-marine inspection organisations (Veritas, Lloyds, etc.):

- 2 to 13.2 Hz: amplitude ±1 mm
- 13.2 to 100 Hz: constant acceleration 0.7 g.

Excessive vibration may cause tripping, breaks in connections or damage to mechanical parts.

Degree of Protection

CVS circuit breakers have been tested for degree of protection (IP) and mechanical impact protection (IK). See page A-3.

The overload protection is calibrated at 50 °C in the lab. This means that when the ambient temperature is less than or greater than 50 °C, the Ir protection pick-up is slightly modified.

To obtain the tripping time for a given temperature:

- see the tripping curves for 50 °C (see pages D-2 and D-5)
- determine tripping times corresponding to the Ir value (thermal setting on the device), corrected for the ambient temperature as indicated in the tables below.

Settings of CVS100 to 630 Equipped With TM-D Trip Units as a Function of the Temperature

The table indicates the real Ir (A) value for a given rating and temperature.

Rat. (A)	Temperature (°C)

Power Supply from the Top or Bottom

CVS circuit breakers can be supplied from either the top or the bottom, even when equipped with a Vigi earth-leakage protection module, without any reduction in performance. This capability facilitates connection when installed in a switchboard.

All connection and insulation accessories can be used on circuit breakers supplied either from the top or bottom.

Follow the local electricity wiring regulations and the diversity factors as specified within those regulations.

Weight

The table below presents the weights (in kg) of the circuit breakers and the main accessories.

Type of Device	Circuit Breakers		Vigi Module	PowerTag Energy	Motor Mechanism
	CVS with TM-D	CVS with ETS			
CVS100	3P 3D	1.64	2.04	0.87	0.25
	4P 4D	2.01	2.81	1.13	0.30
	4P 3D	2.01	2.81	1.13	0.30
CVS160	3P 3D	1.60	2	0.87	0.25
	4P 4D	2.08	2.88	1.13	0.30
	4P 3D	2.08	2.88	1.13	0.30
CVS250	3P 3D	1.79	2.19	0.87	0.25
	4P 4D	2.39	3.19	1.13	0.30
	4P 3D	2.39	3.19	1.13	0.30
CVS400	3P 3D	4.37	4.71	2.8	0.8
	4P 4D	5.83	6.32	3	1
	4P 3D	5.83	6.32	3	1
CVS630	3P 3D	4.80	5.24	2.8	0.8
	4P 4D	6.40	7.14	3	1
	4P 3D	6.40	7.14	3	1

General Rules

When installing a circuit breaker, minimum distances (safety clearances) must be maintained between the device and panels, bars and other protection devices installed nearby. These distances, which depend on the ultimate breaking capacity, are defined by tests carried out in accordance with standard IEC 60947-2.

If installation conformity is not checked by type tests, it is also necessary to:

- use insulated bars for circuit-breaker connections
- segregate the busbars using insulating screens

For CVS100 to 630 devices, terminal shields and interphase barriers are recommended and may be mandatory depending on the operating voltage of the device and type of installation (fixed, withdrawable, etc.).

Power Connections

The table below indicates the rules to be respected for CVS100 to 630 devices to ensure the insulation of live parts for fixed devices.

CVS100 to 630: rules to be respected to ensure the insulation of live parts

Type of Connection	Fixed, Front Connection			Fixed, Rear Connection
Possible, recommended or mandatory accessories:	No insulating accessory	Interphase barriers	Long terminal shields ⁽¹⁾	Short terminal shields
With:				

Operating Voltage	Type of Conductor					
≤ 440 V	Insulated bars		Possible	Possible	Possible	Recommended
	Extension terminals Cables + crimp lugs		No	Mandatory (supplied)	Possible (instead of ph. barriers)	Recommended
	Bare cables + connectors		Possible for CVS100 to 250	Possible for CVS100 to 250	Possible for CVS100 to 250	Recommended
			No	Mandatory (supplied)	Possible (instead of ph. barriers)	

(1) Long terminal shields provide a degree of protection of IP40 (ingress) and IK07 (mechanical impact).

Safety Clearance

Minimum distance between two adjacent circuit breakers

Minimum distance between circuit breaker and front or rear panels

Bare or painted sheet metal

Note: if $F < 8$ mm: an insulating screen or long terminal shield is mandatory.

Minimum distance between circuit breaker and top, bottom or side panels

Devices without accessories.

Devices with interphase barriers or long terminal shields.

Minimum Safety Clearances for CVS100 to 630

Dimensions (mm) Circuit Breaker	Insulation, Insulated Bars or Painted Sheet Metal			Bare Sheet Metal			
	C1	D1	D2	C1	D1	D2	A1
CVS100-250 U ≤ 440V	0	30	30	5	35	35	0
CVS400-630 U ≤ 440V	0	30	30	5	60	60	0

Live busbars.

Clearances With Respect to Live Bare Busbars

Minimum clearances for CVS100 to 630

Operating Voltage	Clearances With Respect to Live Bare Busbars			
	spacing ≤ 60 mm		spacing > 60 mm	
	F1	F2	F1	F2
U < 440 V	350	350	80	80
U = 440 V	350	350	120	120

These clearances can be reduced for special installations as long as the configuration is checked by tests.

EasyPact CVS thermal power loss values are used to calculate total temperature rise in the switchboard in which the circuit breakers are installed.

With a Vigi module, the deviation of the N and L3 bars required to pass through the toroid results in higher power losses compared to those of the L1 and L2 bars.

The values indicated in the tables below are typical values for a device at full rated load and 50/60 Hz.

Power Loss Per Pole (P/Pole) in Watts (W)

The value indicated is the power loss at I_N , 50/60 Hz, for a three-pole or four-pole circuit breaker. Measurement and calculation of power loss are carried out in compliance with the recommendations of Annex G of standard IEC 60947-2.

Resistance Per Pole (R/Pole) in Milliohms (mΩ)

The value of the resistance per pole is provided as a general indication for a new device.

The value of the contact resistance must be determined on the basis of the measured voltage drop, in accordance with the manufacturer's test procedure (ABT instruction document no. 1 - BEE - 02.2 -A).

Note: this measurement is not sufficient to determine the quality of the contacts, i.e. the capacity of the circuit breaker to carry its rated current.

Additional Power Loss

Additional power loss is equal to the sum of the power dissipated by the following:

- Vigi module: note that the deviation of the N and L3 bars required to pass through the toroid results in higher power losses compared to those of the L1 and L2 bars (diagram opposite). When calculating total power loss, use L1, L2, L3 for a 3P device and N, L1, L2, L3 for a 4P device
- disconnecting contacts (plug-in and withdrawable devices)
- ammeter module
- transformer module

Calculation of Total Power Loss

Total power loss at full rated load and 50/60 Hz is equal to the sum of the device and additional power losses per pole multiplied by the number of poles (2, 3 or 4). If a Vigi module is installed, it is necessary to differentiate between N and L3 on one hand and L1 and L2 on the other.

Conductor Materials and Electrodynamical Stresses

EasyPact CVS circuit breakers can be connected indifferently with bare-copper, tinned-copper and tinned-aluminium conductors (flexible or rigid bars, cables). In the event of a short-circuit, thermal and electrodynamic stresses will be exerted on the conductors. They must therefore be correctly sized and held in place by supports.

Electrical connection points on switchgear devices (switch-disconnectors, contactors, circuit breakers, etc.) should not be used for mechanical support. Any partition between upstream and downstream connections of the device must be made of non-magnetic material.

The diagram is shown with circuits de-energized with all devices open

After tripping initiated by the "Push to trip" button or by the undervoltage (MN) release or the shunt (MX) release, device reset can be remote or manual.

Following tripping due to an electrical fault, manual reset is mandatory after fault is cleared.

Current and Energy Limiting Curves

The limiting capacity of a circuit breaker is its aptitude to let through a current, during a short-circuit, that is less than the prospective short-circuit current.

The exceptional limiting capacity of the EasyPact CVS range is due to the rotating double-break technique (very rapid natural repulsion of contacts and the appearance of two arc voltages in-series with a very steep wavefront).

Ics = 100 % Icu

The exceptional limiting capacity of the EasyPact CVS range greatly reduces the forces created by fault currents in devices.

The result is a major increase in breaking performance.

In particular, the service breaking capacity Ics is equal to 100 % of Icu.

The Ics value, defined by IEC standard 60947-2, is guaranteed by tests comprising the following steps:

- break three times consecutively a fault current equal to 100% of Icu
- check that the device continues to function normally, that is:
 - it conducts the rated current without abnormal temperature rise
 - protection functions perform within the limits specified by the standard
 - suitability for isolation is not impaired

Longer Service Life of Electrical Installations

Current-limiting circuit breakers greatly reduce the negative effects of short-circuits on installations.

Thermal Effects

Less temperature rise in conductors, therefore longer service life for cables.

Mechanical Effects

Reduced electrodynamic forces, therefore less risk of electrical contacts or busbars being deformed or broken.

Electromagnetic Effects

Fewer disturbances for measuring devices located near electrical circuits.

Current and Energy Limiting Curves

The limiting capacity of a circuit breaker is expressed by two curves which are a function of the prospective short-circuit current (the current which would flow if no protection devices were installed):

- the actual peak current (limited current)
- thermal stress (A²s), i.e. the energy dissipated by the short-circuit in a conductor with a resistance of 1 Ω

Maximum Permissible Cable Stresses

The table below indicates the maximum permissible thermal stresses for cables depending on their insulation, conductor (Cu or Al) and their cross-sectional area (CSA). CSA values are given in mm² and thermal stresses in A²s.

CSA		1.5 mm ²	2.5 mm ²	4 mm ²	6 mm ²	10 mm ²

Coordination Between Circuit Breakers

Introduction to Selectivity

E002497-07.eps

Selectivity of over-current protection is covered by circuit breakers standards: IEC 60947-2 Annex A and IEC 60898-1 Annex D.

Selectivity of residual current protection is covered by IEC 60364 series and product standards IEC 60947-2 Annex B and M, IEC 61009-1.

Selectivity (Discrimination)

Selectivity is achieved by overcurrent and earth fault protective devices if a fault condition, occurring at any point in the installation, is cleared by the protective device located immediately upstream of the fault, while all the other protective devices remain unaffected.

Selectivity is required for installation supplying critical loads where one fault on one circuit shall not cause the interruption of the supply of other circuits. In the IEC 60364 series it is mandatory for installation supplying safety services (IEC60364-5-56 2009 560.7.4). Selectivity may also be required by some local regulations or for some special applications like:

- Medical location
- Marine
- High-rise building

Selectivity is highly recommended when power availability and reliability is critical due to the nature of the loads such as:

- Data centers
- Infrastructure (tunnel, airport...)
- Critical processes

From installation point of view: selectivity is achieved when the maximum short-circuit current at a point of installation is below selectivity limit of the circuit breakers supplying this point of installation. Selectivity shall be checked for all circuits supplied by one source and for all types of fault:

- Overload
- Short-circuit
- Earth fault

When system can be supplied by different sources (Grid or Generator Set for instance) selectivity shall be checked in both cases.

D043077-C06.eps

Selectivity is essential to ensure continuity of supply and fast fault localization.

Coordination Between Circuit Breakers Introduction to Selectivity

Practical example of selectivity at several levels with Schneider Electric circuit breakers

Coordination Between Circuit Breakers

Introduction to Selectivity

Selectivity limits given in the selectivity tables are the best performance that can be achieved between two given circuit breakers. When the upstream circuit breaker is adjustable and its setting values are not specified, it is considered that it is set to its maximum values.

Nevertheless, high selectivity performance is possible with lower settings.

How to Use the Selectivity Tables

Combinations providing full selectivity are indicated by the symbol T (up to downstream breaker I_{cu})

If selectivity is partial, the table indicates the maximum fault current value (kA) until which selectivity is ensured.

Requisite Conditions

The value indicated in the tables are valid for operational rated voltage 380V 400V 415V 50-60Hz. Following ratios shall be respected to avoid overlapping of tripping curves.

Upstream	Downstream	I_r Up / I_r Down	I_m Up / I_m Down
TM	TM	1.6	2
	MA + O/L	3	2
ETS	TM	1.6	2
	ETS	1.3 (1)	1.5
	MA + O/L = separate overload relay	3	2
Micrologic	TM	1.6	2
	ETS	1.3 (1)	1.5
	MA + O/L = separate overload relay	3	2

When Magnetic threshold is adjustable, table is based on maximum setting I_m (= $10 \times I_r$ typically).

When t_r is adjustable t_r upstream > t_r downstream.

When t_{sd} is adjustable t_{sd} upstream > t_{sd} downstream.

Selectivity of RCDs

When circuit breakers are equipped with RCD function, selectivity tables are valid for short-circuit and earth fault with high amplitude current.

Residual Current Devices[RCD] are by design very sensitive to fault and shall be coordinated properly to achieve total selectivity in addition to overcurrent protection.

Schneider Electric proposes a wide range of solutions with the RCD function.

All these devices from Schneider Electric are following by design the same rules for sensitivity and tripping time even if they are covered by different standard (IEC/EN 61009-1, IEC/EN 60947-2 Annex B or Annex M, IEC 61008). So, whatever the type of RCD is, the following rules apply:

- the sensitivity of the upstream residual current device must be at least equal to three times the sensitivity of the downstream residual current device
- the upstream residual current device must be:
 - of the selective (S) type (or setting) if the downstream residual current device is an instantaneous type.
 - of the delayed (R) type (or setting) if the downstream residual current device is a selective type. The minimum non-tripping time of the upstream device will therefore be greater than the maximum tripping time of the downstream device for all current values.

$$I\Delta n D1 \geq 3 \times I\Delta n D2 \ \& \ \Delta t (D1) > \Delta t (D2).$$

Ue ≤ 415 Vac

4 Selectivity limit = 4kA

T Total selectivity, up to the breaking capacity of the downstream circuit breaker.

No Selectivity

Note: respect the basic rules of selectivity for overload and short-circuit. See Introduction.

Cascading is the legacy name used by Schneider Electric.

Product standards such as IEC/EN 60947, 60898, 61009-1 call this performance of two circuit-breakers “back-up protection”.

Low voltage Electrical installation standard IEC 60364 series and in particular IEC 60364-5-53 (2019) Clause 535.5 use the wording “Combined short-circuit protection”.

In this document we’ll keep “Cascading”, but the three wordings are equivalent.

In North America and UL standards this performance is known as “Series rating”.

D1 and D2 in series.

IEC 60947-2, Annex A

IEC 60364-4-43 (2008) § 434.5.1

What is Cascading?

Cascading is the use of the current limiting capacity of circuit breakers at a given point to permit installation of lower-rated and therefore lower-cost circuit breakers downstream. The upstream ComPact circuit breakers acts as a barrier against short-circuit currents. In this way, downstream circuit breakers with lower breaking capacities than the prospective short-circuit (at their point of installation) operate under their normal breaking conditions. Since the current is limited throughout the circuit controlled by the limiting circuit breaker, cascading applies to all switchgear downstream. It is not restricted to two consecutive devices.

General Use of Cascading

With cascading, the devices can be installed in different switchboards. Thus, in general, cascading refers to any combination of circuit breakers where a circuit breaker with a breaking capacity less than the prospective I_{sc} at its point of installation can be used. Of course, the breaking capacity of the upstream circuit breaker must be greater than or equal to the prospective short-circuit current at its point of installation. The combination of two circuit breakers in cascading configuration is covered by the following standards of:

- design and manufacture of circuit breakers (IEC 60947-2, Annex A).
- electrical distribution networks (IEC 60364-4-43 Ed 3 2008 § 434.5.1).

Coordination Between Circuit Breakers

The use of a protective device possessing a breaking capacity less than the prospective short-circuit current at its installation point is permitted as long as another device is installed upstream with at least the necessary breaking capacity. In this case, the characteristics of the two devices must be coordinated in such a way that the energy let through by the upstream device is not more than that which can be withstood by the downstream device and the cables protected by these devices without damage.

Cascading can only be checked by laboratory tests and the possible combinations can be specified only by the circuit breaker manufacturer.

Cascading Tables

Schneider Electric cascading tables are:

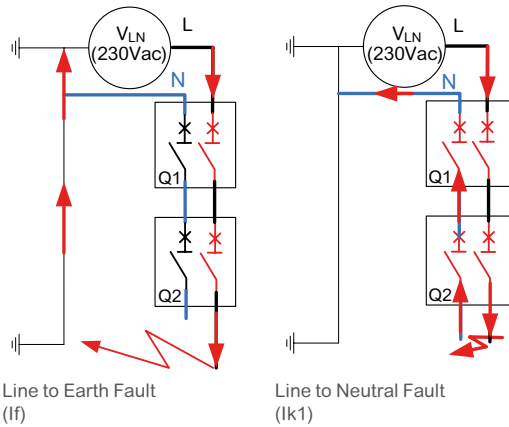

- drawn up on the basis of calculations (comparison between the energy limited by the upstream device and the maximum permissible thermal stress for the downstream device).
- verified experimentally in accordance with IEC standard 60947-2.

Circuit breaker with Vigi module (Add-On Residual Current Device - RCD):

When circuit breakers are equipped with Vigi module, the following cascading tables are still applicable.

How to use the table

The reinforced breaking capacity given in the table shall be compared to the presumed short-circuit current (rms value) at the point of installation without taking in consideration the limitation effect of the upstream circuit-breaker.

Difference Between Line to Neutral and Line to Earth Fault Regarding Cascading

The number of poles breaking the current is different in case of line to neutral fault and line to earth fault.

The reinforced breaking capacity published in tables for a given “Line to Line” system voltage applies to all type of faults including line to earth.

Application of Cascading

Both “Industrial” circuit-breaker standard (IEC/EN 60947) and “residential” circuit breaker standards (IEC/EN 60898 & 61009) define and provide test method for this “cascading” performance.

Anyway, Schneider Electric doesn’t recommend to apply cascading in installation used by uninstructed persons. The following tables are therefore providing a “reinforced breaking capacity” according to IEC 60947-2, Annex A.

Functions and Positions of LV Switches

Switches are necessary in different level of low voltage installation for the following main applications:

- functional switching
- supplying installation from different sources (transfer-switching equipment)
- starting stopping equipments
- emergency switching
- switching off and disconnection for isolation of one circuit or switchboard for maintenance

IEC 60364-5-53 Electrical installations of buildings – Part 5-53: Selection and erection of electrical equipment

Isolation, switching and control standard provides requirement for isolation of circuits, functional switching, and emergency switching.

IEC 60204-1 Safety of machinery - Electrical equipment of machines - Part 1: General requirements

standard provides requirements for disconnection of machines.

Suitability for isolation is necessary to ensure people safety in open position.

Suitable for isolation

Switch-disconnector

Isolation function i.e. disconnection from supply is required for all circuits or equipment in order to guarantee the safety of people during repairs or maintenance.

Low voltage electrical installation standards (IEC 60364 series for example) provide requirements to ensure properly this function:

Device for isolation shall:

- Isolate all live conductors (including neutral but not PEN).
- Withstand specified impulse voltage in open position.
- have a leakage current below specified values in open position.
- be lockable in the open position so as to prevent any risk of involuntary reclosing.
- ensure that the isolating distance between open contacts of the device is visible or be clearly and reliably indicated by off or open marking.

These requirements are totally covered with devices compliant to IEC 60947-1/2/3 suitable for isolation.

This characteristic is clearly marked on product by the symbol of switch-disconnector.

Coordination

All switches must be protected by an overcurrent protection device placed upstream.

The tables below give the coordination performance of circuit breakers and switch-disconnector of main Schneider Electric ranges: in the event of an overload or a short-circuit the circuit breaker proposed in the table will protect the switch-disconnector according to its electrodynamic withstand and short-time and permanent withstand.

Motor Protection Coordination

Protection of Motor Circuit with Circuit-breaker

Introduction

A circuit supplying a motor may include one, two, three or four switchgear or controlgear devices fulfilling one or more functions.

When a number of devices are used, they must be coordinated for providing optimum operation of the motor.

Protection of a motor circuit involves a number of parameters that depend on:

- the application (type of machine driven, starting frequency, etc.)
- the level of service continuity imposed by the load or the application
- the applicable standards to ensure protection of life and property.

The necessary electrical functions are of very different natures:

- protection (motor-dedicated for overloads)
- control (generally with high endurance levels)
- isolation.

Protection Functions

Disconnection functions:

- Isolate a motor circuit prior to maintenance operations.

Short-circuit protection:

Protect the starter and the cables against major overcurrents ($> 10 I_n$).

Control:

Start and stop the motor, and, if applicable:

- gradual acceleration
- speed control

Overload protection:

Protect the starter and the cables against minor overcurrents ($< 10 I_n$).

Additional specific protection:

- limitative fault protection (while the motor is running)
- preventive fault protection (monitoring of motor insulation with motor off)

Overloads ($I < 10 I_n$)

An overload may be caused by:

- an electrical problem, for instance on the mains (loss of a phase, voltage outside tolerances, etc.).
- a mechanical problem, for instance excessive torque due to abnormally high demands by the process or motor damage (bearing vibrations, etc.).

A further consequence of these two origins is excessively long starting.

Impedant Short-Circuit ($10 < I < 50 I_n$)

Deterioration of motor-winding insulation is the primary cause.

Short-Circuit ($I > 50 I_n$)

This type of fault is relatively rare. A possible cause may be a connection error during maintenance.

Overload Protection

Thermal relays provide protection against this type of fault. They may be:

- integrated in the short-circuit protective device
- separate

Short-Circuit Protection

This type of protection is provided by a circuit breaker.

Protection Against Insulation Faults

This type of protection may be provided by:

- a residual current device (RCD).
- an insulation monitoring device (IMD).

Motor Protection Coordination Protection of Motor Circuit with Circuit-breaker

Applicable Standards

A circuit supplying a motor must comply with the general rules set out in IEC standard 60947-4-1 and in particular with those concerning contactors, motor starters and their protection as stipulated in IEC 60947-4-1, notably:

- coordination of the components of the motor circuit
- trip class for thermal relays
- contactor utilisation categories
- coordination of insulation.

Coordination of the Components of the Motor Circuit

Two types of coordination

The standard defines tests at different current levels. The purpose of these tests is to place the switchgear and controlgear in extreme conditions.

Depending on the state of the components following the tests, the standard defines two types of coordination:

■ type 1:

Deterioration of the contactor and the relay is acceptable under two conditions:

- no danger to operating personnel
- no danger to any components other than the contactor and the relay

■ type 2:

Only minor welding of the contactor or starter contacts is permissible and the contacts must be easily separated.

- following type-2 coordination tests, the switchgear and controlgear functions must be fully operational.

EasyPact CVS100BS

Simplicity and perfection – That's what Schneider Electric brings to you. EasyPact CVS100BS not only reflects high quality of Schneider Electric, but also features performance, protection functions, and performance/price ratio.

EasyPact CVS100BS

- up to 100A 3 Pole/4 Pole products
- Icu 25kA, Ics 17kA
- Reliable protections of power distribution systems
- Flexible installation solutions including fixed, plug-in types
- Complete solutions for AC and DC networks

More reliable and safer

Powerful current-limiting capacity to ensure more cost-effective and more reliable protection.

Modularized System

As shown below, a wide range of modules or accessories are available.

1. Breaking unit
2. MN and MX voltage releases
3. Direct rotary handle
4. Extended rotary handle
5. Short terminal shield
6. Long terminal shield
7. Connection accessories
8. Terminal protectors

PB106445

EasyPact CVS100BS

Compliance With Standards

- IEC 60947-1: General rules (GB/T 14048.1)
- IEC 60947-2: Circuit Breakers (GB/T 14048.2)
- IEC 60947-4: Contactors and Motor Starters (GB 14048.4)
- IEC 60946-5.1: Control circuit devices and Switching elements; automatic Control Components (GB 14048.5)

Tropicalization

EasyPact CVS100BS circuit breakers have successfully passed the tests prescribed by following standards for extreme atmospheric conditions:

- IEC 60068-2-30, damp heat (95% relative humidity at 55°C)
- IEC 60068-2-52 Salt mist (severity level 2)

Positive Contact Indication

All EasyPact CVS100BS circuit breakers are suitable for isolation as defined in IEC standard 60947-2:

- the isolation position corresponds to the O (OFF) position
- the operating handle cannot indicate the "OFF" position unless the contacts are effectively open
- padlocks may not be installed unless the contacts are open

Installation of a rotary handle or a motor mechanism does not alter the reliability of the position-indication system.

The isolation function is certified by tests guaranteeing:

- the mechanical reliability of the position indication system
- the absence of leakage currents
- overvoltage withstand capacity between upstream and downstream connections

Connection of Electrical Auxiliaries Fixed Configuration

Auxiliary circuits exit the device through a knock-out in the front cover.

EasyPact CVS100BS

Each auxiliary device is equipped with a terminal block with numbered terminals for connection of wires up to:

- 1.5mm² for auxiliary contacts and voltage releases

EasyPact CVS100BS auxiliary contacts

EasyPact CVS100BS Auxiliary Switch

This auxiliary contact can display the status of circuit breakers remotely, and therefore can be used for indications electrical interlocking, relay control. etc.

Functions

- OF (On/off): Indicate the position of circuit breaker contacts.
- SD (Trip indication): Indicate trip conditions of circuit breakers due to overload, short-circuit, under-voltage or operation of the "push to trip" button. It returns to de-energised state when the circuit breaker is reset.

EasyPact CVS100BS Multifunctional Auxiliary Switch

- OF/SD (Auxiliary + alarm): Indicate position of circuit breaker contacts and trip conditions of circuit breakers.

Standard

These auxiliary contacts comply with IEC 60947-5.

Installation and Connection

- This auxiliary contact clip into the slot behind the front cover of the circuit breaker.
- The conductor connected to the central terminal block has a cross-section up to 1.0mm².

All auxiliary contacts can be used to switch on/off electronic loads.

Electrical Characteristics		In: 100A	
Rated thermal current (A)		5	
Minimum load		10mA, 24V	
Utilisation (IEC 947-4-1)		AC12	AC15
Operating current (A)	110V	5	3
	220~240V	3	2
	380~440V	-	-

Voltage Tripping

The voltage releases can trip the circuit breaker.

Under-voltage release (MN) trips the circuit breaker:

- When the tripping threshold drops below the rated voltage of the trip unit.
- The tripping threshold is 0.35 to 0.7 times the rated voltage.
- If the circuit breaker can be closed when the voltage exceeds 0.85 times the rated voltage.

Circuit breaker tripping by an MN release meets the requirements of standard IEC60947-2.

Shunt Releases (MX)

The circuit breaker will trip by this release if the control voltage exceeds $0.7 \times U_n$. Control signals can be of the impulse type (≥ 20 ms) or maintained.

Operation

- The circuit breaker can be reset locally or remotely after tripping by an MN or MX release.
- MN or MX tripping is faster than manual tripping (or trip by electric mechanism). In the presence of a standing trip order, other operations will not be executed.
- Endurance:
 - EasyPact CVS100BS circuit breaker, typically 50% of the rated mechanical endurance of the circuit breaker

Installation and connection

- The circuit breaker panel has MX and MN releases at the rear part.
- Connection using wires up to 1.5mm².

EasyPact CVS100BS Voltage Release

For EasyPact CVS100BS		EasyPact CVS100BS	
		AC	DC
Consumption	Pick-up (MX)	< 10VA	< 10W
	Seal-in (MN, MNR)	< 5VA	< 5W
Response time (ms)		< 50	< 50

Note: 1. CVS100BS: select any two from three auxiliary switches (OF, SD, OF/SD).

Rotary Handle

Two types of rotary handle are available:

- Direct rotary handle
- Extended rotary handle

Direct Rotary Handle

Protection degree: IP40, IK07, IP54

Operation

- Function:
 - Suitability for isolation
 - Indications of three positions including O (OFF), I (ON) and Tripped
 - Access to push-to-trip button
 - Circuit breaker locking capability in the OFF position by 1 to 3 padlocks, with a shackle diameter 5 to 8 mm (not supplied)

EasyPact CVS100BS with a direct rotary handle

Installation

The front cover of the circuit breaker can be removed and replaced by the extended handle.

EasyPact CVS100BS series

The direct rotary handle is used in the following cases:

- Switchboards in motor control center (MCC):
 - Circuit-breaker closing is disabled if the door is open.
 - Door opening is disabled when the circuit breaker is ON.
 - Protection degree: IP43, IK07 (IP54, IK08)
 - Machine tool control, in compliance with CNOMO E03.81.501N, with a protection degree of IP54, IK08

Extended Rotary Handle

The circuit breaker on the switch cabinet can be operated with the rotary handle on the front.

Protection Degree: IP55, IK08, IP54

Operation Functions:

- Suitability for isolation
 - Indications of three positions including O (OFF), I (ON) and Tripped
 - Access to trip unit settings, when the switchboard door is open
 - Circuit breaker closing is disabled if the door is open
 - Circuit breaker locking capability in the OFF position by 1 to 3 padlocks, with a shackle diameter 5 to 8 mm (not supplied). These are used to prevent the door from being opened

EasyPact CVS100BS with an extended rotary handle

The Extended Rotary Handle is Made up of:

- A unit that replaces the front cover of the circuit breaker ⁽¹⁾.
- An assembly (handle and front plate) on the door that is always secured in the same position, whether the circuit breaker is horizontally or vertically installed.
- An extension shaft that must be adjusted to the distance. The distance between the back of the circuit breaker and door is:
 - EasyPact CVS100BS: 145~422mm

Temperature Derating of Trip Units EasyPact CVS100BS

Rating (A)	40°C	45°C	50°C	55°C	60°C	65°C	70°C
16	16.7	16.3	16.0	15.7	15.6	15.1	14.7
20	20.4	20.2	20.0	19.7	19.2	18.9	18.5
25	25.7	25.3	25.0	24.7	24.5	24.3	24.0
32	33.5	32.7	32.0	31.4	31.0	30.4	29.9
40	40.9	40.4	40.0	39.5	38.0	37.6	37.1
50	52.1	51.0	50.0	49.3	48.1	47.3	46.6
63	64.9	63.9	63.0	62.0	60.4	59.4	58.5
80	82.2	81.1	80.0	78.6	77.3	76.7	76.1
100	103.0	101.0	100.0	99.0	94.0	94.0	93.0

Altitude Derating of Trip Units

Altitude does not significantly affect circuit-breaker characteristics up to 2000 m. Above this altitude, it is necessary to take into account the decrease in the dielectric strength and cooling capacity of air. It should be noted that the breaking capacity remained unchanged.

EasyPact CVS100BS			
Height (m)	2000	2600	3900
Dielectric strength (V)	3000	2850	2400
Maximum operation voltage (V)	690	655.5	552
Nominal current at 50°C (A)	1 x In	0.95 x In	0.8 x In

Current-limiting capacity refers to the ability of a circuit breaker to limit short-circuit current.

Ics 17kA

Current-limiting performance of EasyPact CVS100BS series helps lower power generated by fault current, and consequently improves the breaking capacity of the circuit-breaker. Ics 17kA.

Extension of service life of electrical installation

Circuit breaker current-limiting technology greatly reduces damage to installation caused by short-circuit current.

Thermal effect

lowers temperature rise and extend the service life of the cable.

Mechanical effect

Risks of contact and busbar distortion and damage are greatly reduced since the electrodynamic force is decreased.

Electromagnetic effect

Disturbance on surrounding measurement instrument is relieved.

Current-limiting curve

Current-limiting capacity of a circuit breaker can be represented by two curves. It varies with the value of prospective short-circuit current (short-circuit current without any protective device).

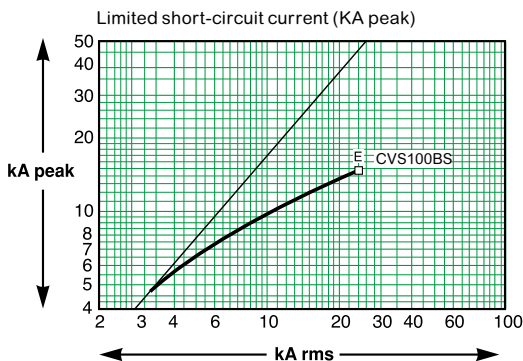

- Actual peak current (current-limiting)
- Thermal effect (A²s), which means energy loss of a 1Ω conductor carrying the short-circuit current.

Maximum allowable thermal stress of cable

The maximum allowable overhear values (in A²s), dependent on cable insulation material (Cu or Al) and cross-section (mm²), are listed in the following table.

Cross section (mm ²)		1.5	2.5	4	6	10
PVC	Copper	2.97 x 10 ⁴	8.26 x 10 ⁴	2.12 x 10 ⁵	4.76 x 10 ⁵	1.32 x 10 ⁶
	Aluminum	-	-	-	-	5.41 x 10 ⁵
PRC	Copper	4.10 x 10 ⁴	1.39 x 10 ⁵	2.92 x 10 ⁵	6.56 x 10 ⁵	1.82 x 10 ⁶
	Aluminum	-	-	-	-	7.52 x 10 ⁵
Cross section (mm ²)		16	25	35	50	
PVC	Copper	3.4 x 10 ⁶	8.26 x 10 ⁶	1.62 x 10 ⁷	3.31 x 10 ⁷	
	Aluminum	1.39 x 10 ⁶	3.38 x 10 ⁶	6.64 x 10 ⁶	1.35 x 10 ⁷	
PRC	Copper	4.69 x 10 ⁶	1.39 x 10 ⁷	2.23 x 10 ⁷	4.56 x 10 ⁷	
	Aluminum	1.93 x 10 ⁶	4.70 x 10 ⁶	9.23 x 10 ⁶	1.88 x 10 ⁷	

Current-limiting curves of EasyPact CVS100BS

EasyPact CVS100BS

EasyPact CVS100BS Circuit Breaker is Suitable for Capacitor Protection Following the Rules Below:

■ **Inc = Nominal current of the capacitor**

$$I_{nc} = \frac{Q_c}{U \cdot \sqrt{3}}$$

Inc = Nominal Current Capacitor (A)
Qc = Reactive power (kVAR)
U = Nominal Voltage (V)

■ **Inb = Nominal current of the circuit breaker**

- Inb = 1.36 x Inc for standard equipment
- Inb = 1.5 x Inc for overrated type equipment
- Inb = 1.12 x Inc for detuned type equipment: 2.7 tuning
- Inb = 1.19 x Inc for detuned type equipment: 3.8 tuning
- Inb = 1.31 x Inc for detuned type equipment: 4.3 tuning
- the short-circuit (magnetic) protection-setting thresholds must enable passage of the energising transients: 10 x Inc for standard, overrated and detuned type equipment.

■ **Icu = Ultimate breaking capacity of the circuit breaker**

Icu short-circuit level is given by the installation.

Example:

Table at 400 V AC - 3 phases 50 Hz for standard equipment.

Reactive Power (kVAR)	Inc (A)	Inb (A)	Breaking Capacity to Circuit Breaker 30 kA
7.5	11	16	LV510930
10	14	20	LV510931
15	22	30	LV510933
20	29	40	LV510934
30	43	60	LV510936
40	58	80	LV510937
50	72	100	LV510938
