Roller shutter actuator REG-K/4x/10 with manual mode, light grey

Main
For independent control of 4 roller shutter drives. The function of the roller shutter channels is freely configurable. All roller shutter outputs can be operated manually using push-button operation. With integrated bus coupler. For installation onto DIN rails EN 50022.

Complementary
Bus connection is via bus terminals, a data rail is not necessary. Channel status display via LEDs. A green LED indicates readiness for operation.

KNX software functions:

For each roller shutter output:
Nominal voltage: AC 230 V, 50-60 Hz
Nominal current: 10 A, \( \cos \phi = 0.6 \)
Motor load: AC 230 V, max. 1000 W
Device width: 4 modules = approx. 72 mm

Contents: With bus connecting terminal and cable cover.

Colour: light grey
