Retrofit & Wireless Products

The advantages of using wireless interfaces throughout your power monitoring system are numerous and proven. Whether you install these products as part of a retrofit upgrade or as modules in a new build environment, ease of installation and commissioning will reap huge economic benefits.
The PowerLogic wireless range is designed to retrofit existing switchboards and enhance the energy efficiency of buildings for many years.

These products are:

- Easy and cost-effective to install
- Able to collect a broad scop of electrical data
- Able to utilize a variety of meters to measure WAGES (Water, Air, Gas, Electricity, Steam) usage
- Transmit all data to a centralized data concentrator for detailed analysis
EM3500 series

The EM3500 Series DIN Rail Meter combines exceptional performance and easy installation to deliver a cost-effective solution for power monitoring applications.

The EM35xx can be installed on standard DIN rail or surface mounted as needed. Pulse output and phase alarms provide additional versatility.

Applications

**Capable of essential cost management:**

- Energy monitoring in building automation systems
- Renewable energy monitoring
- Commercial sub-metering
- Energy management
- Industrial monitoring
- Accurate cost allocation
The solution for

Markets that can benefit from a solution that includes PowerLogic EM3500 series meters:
- Buildings
- Industry
- Healthcare
- Data Centre and networks
- Infrastructure

Benefits

**System integrators’ benefit**
- Ease of integration
- Ease of setup
- Cost effectiveness

**Panel builders’ benefit**
- Ease of installation
- Cost effectiveness
- Aesthetically pleasing
- Simplified ordering

**End users’ benefit**
- Ease of use
- Precision metering & sub-billing
- Billing flexibility
- Comprehensive, consistent and superior performance

Competitive advantages

- DIN rail mounting option; easy installation
- Real energy output and phase loss alarm output
- 90-600 V AC; application versatility with fewer models to stock
- Bright backlit LCD; easy visibility in dark enclosures
- Data logging capability safeguard during power failures
- EM35xx models compatible with LVCTs from 5 A to 32000 A
- User-enabled password protection prevents tampering
- Native BACnet MS/TP support (no gateway)

Power management solutions

Schneider Electric provides innovative power management solutions to increase your energy efficiency and cost savings, maximise electrical network reliability and availability, and optimise electrical asset performance.

Conformity of standards

- IEC 61557-12
- IEC 62053-22
- IEC 62053-24
- IEC 61010-1
- IEC 61000-4-2
- IEC 61000-4-3
- IEC 61000-4-4
- IEC 61000-4-5
- IEC 61000-4-6
- IEC 61000-4-8
- Etc.
EM3500 series

The data logging capability (EM3555 and EM3560) protects data in the event of a power failure. Modbus, pulse output, and phase alarms are all provided to suit a wide variety of applications. Additional pulse inputs on EM3560 provide an easy way to incorporate simple flow sensors to track gas, water, steam, or other energy forms using a BACnet system in addition to full monitoring of electrical energy.

EM35xxA (Pulse, Modbus, BACnet) models designed for use exclusively with Rogowski coil CTs where integrator and power supply for the CTs are built into the meter, resulting in fewer devices to purchase and faster to install. (Not recommended for high harmonic applications.)

The EM3555 models adds a bi-directional monitoring feature designed expressly for renewable energy applications, allowing measurement of power imported from the utility grid as well as power exported from the renewable energy source (e.g. solar panels). In this way, a facility administrator track all energy data, ensuring accuracy in billing and crediting.

• Features
  – All Models: A compact solution for panelboard monitoring
    – DIN rail mounting option; easy installation
    – ANSI 12.20 0.2% accuracy, IEC 62053-22 Class 0.2S for all 35xx models; great for cost allocation
    – ANSI C12.20 0.5% accuracy, IEC 62053-22 Class 0.2S for EM35xxA models
    – Real energy output and phase loss alarm output on EM3502(A), EM3550(A), and EM3555 models; one device serves multiple applications
    – 90-600 VAC; application versatility with fewer models to stock
    – Bright backlit LCD; easy visibility in dark enclosures
    – Data logging capability EM3555 & EM3560(A); safeguard during power failures
    – EM35xx models compatible with LVCTs from 5 A to 32000 A; wide range of service types
    – User-enabled password protection; prevents tampering
    – EM35xxA models are designed to work exclusively with Rogowski coil CTs 20-5000 A range. Eliminate site walks, save time and money. (Not recommended in high harmonic applications.)
    – System integration via Modbus EM355xx(A) or BACnet MS/TP EM356xx(A); convenient compatibility with existing systems
    – Native BACnet MS/TP support (no gateway) with serial rates up to 115.2 kbaud EM3560, EM3561, EM3560A, & EM3561A
  – EM3555 Models: An essential solution for Solar and other renewable energy applications
    – Bi-directional metering (4-quadrant); allows net metering
    – Data logging capability; ensures long term data retrieval
    – CSI approved
## EM3500 series

### Selection guide

| Electrical characteristics |  |
|----------------------------|  |
| **Inputs** | **Control Power, AC** | 50-60 Hz, 5 VA max.; 90 V min.; UL Maximums: 600 V L-L (347V L-N ); CE Maximums: 300 V L-N (520V L-L ) |
| **Control Power, DC** | 3W max.; UL and CE: 125 to 300 V DC (external DC current limiting required) |
| **Voltage Input** | **UL**: 90 V L-N to 600 V L-L; **CE**: 90 V L-N to 300 V L |
| **Current Input** | **Scaling** | S to 32.000 A Non “A” models only; 20 A to 5000 A for ”A” models only |
| **Input Range** | 1/3V and 1V nominal LVCT (selectable) Non “A” models only; Rogowski coil CTs only for “A” models |
| **Pulse Inputs** | (EM3560 & EM3560A) | Two sets of contact inputs to pulse accumulators |
| **Accuracy** | **Real Power and Energy** | 0.2% (ANSI C12.20, IEC 62053-22 Class 0.2S) EM35xx models only; 0.5% (ANSI C12.20, IEC 62053-22 Class 0.5S) EM35xxA models only |
| **Outputs** | **All Models (EM3560, EM3560A, EM3561 & EM3561A)** | **Real Energy Pulse**: N.O. static; **Alarm contacts**: N.C. static |
| **EM3502** | **Reactive energy pulse**: 30 VAC/DC |
| **EM3550, EM3555, EM3550A** | **RS-485 2-wire Modbus RTU (1200 baud to 38.4 kbaud)** |
| **EM3660, EM3660A, EM3561, EM3561A** | **RS-485 2-wire BACnet MS/TP (9600 baud to 115.2 kbaud)** |

### Mechanical characteristics

| Mounting | DIN Rail or 3-point screw mount |
| Environmental conditions |  |
| **Operating temperature Range** | -30 °C to 70 °C |
| **Storage Temperature Range** | -40 °C to 85°C |
| **Humidity Range** | <95% RH non-condensing |

### Accessories

| **NEMA 4x enclosure (EM3500-ENC, pictured)** |
| **Split-core low voltage CTs (LVCTxx)** |
| **Fuse kits (EFP1, EFP2, EFP3)** |

### Safety

| **US and Canada (cULus) UL508 (open type device) / CSA 22.2 No. 14-05** |
| **Europe (CE) EN61010-1:2001** |

Please see EM3500 User Guide and EM3500 Installation Guide for safe and correct wiring and connection information.
EM4200 series

The PowerLogic EM4200 Series Enercept power and energy meters provide a unique solution for measuring energy data.

Designed for simplicity, the range includes two main offers: System Calibrated and Flex. The EM4200 System Calibrated offers system accuracy, pre-mounted Current Transducers, with a simple to quote and order single part number.

The EM4200 Flex offers the flexibility of a wide range of Current Transducers to match most applications, no matter how varied.

Applications

**Capable of essential cost management:**

- Energy monitoring in building automation systems
- Renewable energy monitoring
- Energy management
- Commercial sub-metering
- Industrial monitoring
- Accurate cost allocation
The solution for
Markets that can benefit from a solution that includes PowerLogic EM4200 series:

- Buildings
- Industry
- Healthcare
- Data centre and networks
- Infrastructure

Power management solutions
Schneider Electric provides innovative power management solutions to increase your energy efficiency and cost savings, maximise electrical network reliability and availability, and optimise electrical asset performance.

Benefits

**System integrators’ benefit**
- Ease of integration
- Ease of setup
- Cost effectiveness

**Panel builders’ benefit**
- Ease of installation
- Cost effectiveness
- Aesthetically pleasing
- Simplified ordering

**End users’ benefit**
- Ease of use
- Precision metering & sub-billing
- Billing flexibility
- Comprehensive, consistent and superior performance

Competitive advantages

- High reliability with high system, or meter accuracy.
- Single part to order a metering chain (System Calibrated).
- Supports a large range of Sensor options. Flex can adapt to CTs from 50 to 5000 A, or different Rogowski coil sizes rated for up to 5000 A.
- Modbus and BACnet protocols along with uni-directional and bi-directional feature sets.
- Wide 90 to 480 V AC input range.
- DIN rail or screw-mount options, including mounting bracket for easy installation.
- Seamless integration with EcoStruxure™ Power Management software products.

Power management solutions
Schneider Electric provides innovative power management solutions to increase your energy efficiency and cost savings, maximise electrical network reliability and availability, and optimise electrical asset performance.

Conformity of standards

- CAN/CSA-C22.2
- EN 61000-6-2
- EN 61000-6-4
- Class A
- EN 61010-1
- EN 61326-1
- FCC 47 CFR Part 15 Class A
- UL 61010-1

Accuracy standards

**Flex models**

- ANSI C12.20-2015 Class 0.2
- IEC 62053-24 Class 1S

When used with 1/3 V CT (Meter accuracy)

- IEC 62053-22 Class 0.2S 0.2%

When used with Rogowski Coils (Meter accuracy)

- IEC 62053-22 Class 0.5S

**System calibrated**

- ANSI C12.1. 1%
- IEC 62053-22 Class 1S 1%
EM4200 series

The EM4200 meter series provides a highly flexible retrofit option ideal when adding metering to an existing building, or to integrate in an OEM solution. Designed to simplify the ordering process, the meter is declined in 2 major options:

System Calibrated offers the simplest way to order, deploy and meet requirements. The meter comes with pre-mounted Current Transducers (CT), or Rogowski Coils. A single reference provides a System calibrated accuracy meter with a 100, 200, 400A CT, or 5,000A Rogowski coil.

Flex offers the flexibility required when the CT, or Rogowski coil, rating or size needs to further adapt to the site. CTs can range from 50 to 5,000A and Rogowski coils can be different sizes with a 5,000 A rating.

- **General features**
  - Uni and Bi-Directional metering to support to power generation application.
  - Data logging.
  - Modbus and BACnet serial communication with auto-protocol and baud rate detection.
  - Configurable with or without power.
  - DIN rail or screw-mount options, including mounting brackets for easy installation.
  - Wide input range of 90 to 480 V AC.
  - Approvals: UL 61010-1, IEC/EN 61010-1

- **System calibrated features**
  - Three factory mounted and calibrated Current Transducers (100, 200 or 400 A), or Rogowski coils (5,000 A, 12” or 18” (304.8 mm or 457.2 mm)).
  - ANSI version only: Fuse packs factory mounted.
  - System Accuracy from 1% to 100% load:
    - Real Power and Energy: ANSI C12.1 1%, IEC 62053-22 Class 1S, 1%.
    - Reactive Power and Energy: IEC 62053-24 Class 1, 1%.

- **Flex features**
  - Supports generic 1/3 V CTs from 50 to 5,000 A.
  - Or 1/3 V 5,000 A Rogowski coils.
  - ANSI: Optional fuse packs available.
  - Meter Accuracy from 1% to 100% of load (CT mode):
    - Real Power and Energy: ANSI C12.20 0.2%, IEC 62053-22 Class 0.2S, 0.2%.
    - Reactive Power and Energy: IEC 62053-24 Class 1, 1%.

### EM4200 parts descriptions and advantages

**EM4200 Flex meter**

- Phase status indicators
- Meter status indicators
- CT rating selection (rotary dial or via software)
- Bus address setting

**EM4200 System calibrated**

- Phase status indicators
- Meter status indicators
- No CT settings or push-pin connectors (pre-mounted CTs)
- Bus address setting
**EM4200 series**

EM4200 series

EM4200 dimensions
The PowerLogic wireless range is designed to retrofit existing switchboards, and enhance energy efficiency of buildings in operation for many years. It achieves this by monitoring energy consumption, to detect potential savings, and monitoring operation of the electrical system, to optimize service to the building occupants.

**Applications**

**Electrical circuits and load monitoring**
- Energy management
- Sub-billing/tenant metering
- Equipment sub-billing
- Energy cost allocation
The solution for

Markets that can benefit from a solution that includes PowerLogic EM4300 series meters:
- Buildings
- Industry
- Healthcare
- Data centre and networks
- Infrastructure

Benefits

System integrators’ benefit
- Ease of integration
- Ease of setup
- Cost effectiveness

Panel builders’ benefit
- Ease of installation
- Cost effectiveness
- Aesthetically pleasing
- Simplified ordering

End users’ benefit
- Ease of use
- Precision metering & sub-billing
- Billing flexibility
- Comprehensive, consistent and superior performance

Competitive advantages
- Easy to install and operate
- Flexible current sensors, immediately fitted around any cable or bar without disconnection
- Minimal interruption to supply and operations
- Equipment can be scaled and implemented over time
- Broad, accurate scope of collected data

Power management solutions

Schneider Electric provides innovative power management solutions to increase your energy efficiency and cost savings, maximise electrical network reliability and availability, and optimise electrical asset performance.

Conformity of standards
- IEC 61557-12
- IEC 62053-22
- IEC 62053-24
- IEC 61010-1
- IEC 61000-4-2
- IEC 61000-4-3
- IEC 61000-4-4
- IEC 61000-4-5
- IEC 61000-4-6
- IEC 61000-4-8
PowerLogic wireless range is designed to retrofit existing switchboards, and enhance energy efficiency of buildings in operation for many years, by:

- Monitoring energy consumption, to detect potential savings.
- Monitoring operation of the electrical system, to optimize service to the building occupants.
- PowerLogic EM4300 meters collect a broad scope of electrical data, from the distribution line they are fitted on.
- PowerLogic WT4100/4200 transmitters collect data from various meters (water, air, gas, steam etc.) with pulse outputs.

Collected data from both these sources are transmitted to a data concentrator, which enables their reading by various energy management services and software.

For data concentrators of various types, see:

- **Com’X for Ethernet networks**

- **SmartStruXure Lite MPM managers for BACnet, EnOcean, CANbus nest works**
EM4300 series

• Functions
  – Electrical circuits and loads monitoring, through a combination of power and energy metering with wireless communication.

• Features and benefits
  – Installation time and therefore total cost of ownership is minimized thanks to:
    – Wireless communication.
    – Attached flexible current sensors, immediately fitted around any cable or bar without disconnection. Power-off time to fit several meters in a switchboard in a matter of minutes.
    – Equipment can be scaled over time, according to savings fields identification, or other matters of interest.
    – Broad scope of collected data make PowerLogic EM4300 of high added-value for:
      – Energy management.
      – Energy cost allocations.
      – Electrical network management and supervision.

• Collected information
  – Energy: active, reactive, apparent, phase by phase and aggregated.
  – Active, reactive and apparent powers, power factor.
  – RMS Voltage and frequency.
  – Maximum RMS current and minimum RMS voltage over the last minutes (1 to 30).

• Wireless data transmission
  – Zigbee Pro HA protocol.
  – 2.4 GHz radio frequency.
  – Maximum power: 10 mW (10 dBm).
  – Compatible with Com’X 200/210 Data loggers, Com’X 510 Energy Servers, and MPM gateways.

• RF Operating range
  – The recommended distances between the meter and the receiver are shown here:
    – Wireless meters are inside electrical switchboards.
    – Wireless receivers are located in the technical room with up to 10 metres range.
    – Location of each element has to match distances as described on the picture.
    – All barriers, walls or pipes have to be considered during the installation. Moving an element by few centimetres can increase or decrease the wireless transmission performance.
    – Checking the LQI (Link Quality Index) is recommended to build a robust network.

Note: Do not install the meter if there is a solid concrete wall between the meter and the gateway.
See appropriate Installation Guide for this product.
EM4300 series

Technical characteristics

Control power
- Powered by L1-N measured input voltage: 90 V to 300 V - 50/60 Hz
- Maximum supply current: 0.4 A
- Maximum burden: 2.0 W

Measurement characteristics
- Input voltage: 90 V to 300 V
- Frequency range: 50 Hz to 60 Hz
- Current range: 0 % to 120 % of rated value (200, 500, 1000 or 2000 A)
- Current sensors: 3 attached to the meter and calibrated as a single unit
- Accuracy: 1 % on active energy (3-phase with neutral) 2 % accuracy for EM4399

Mechanical characteristics
- Degree of protection (for indoor use only, not suitable for wet locations): IP20, IK06
- Insulation Class II (IEC 61010-1 CAT III 300 V)

Environmental characteristics
- Operating temperature: -10 °C to 55 °C
- Moisture withstand: 5 % to 90 % relative humidity, non-condensing, maximum dewpoint 38 °C
- Pollution degree: 2
- Voltage surges: Category III
- Altitude: 2000 m above sea-level

Standards compliance
- Safety: IEC/EN 61010-1 ed. 3, UL 61010-1 ed. 3
- Electromagnetic compatibility: EN 61326-1:2013
- Wireless communication: FCC CFR Part 15, subparts B and C

EM4300 series

Mounting

- DIN-rail or flat surface.
- Flexible current sensors around conductor to be monitored.
  Max inner Ø 55 or 125 mm. For safe and correct mounting, refer to the installation guide.

See appropriate Installation Guide for further information.

Dimensions

Install the meter away from panel edges

WT4100/4200

The PowerLogic WT4100/4200 wireless metering solution is ideal for hazardous environments or installations that are remote or on difficult terrain.

This long-range radio frequency (RF) wireless solution consists of transmitters and a receiver. Typically, repeaters are also installed and located between the transmitter and receiver to boost the transmission signal when the line-of-sight distance between the transmitter and receiver is greater than the transmitter’s range.

Applications

**Capable of essential cost management:**

- Sub-billing/tenant metering
- Equipment sub-billing
- Energy cost allocation
The solution for
Markets that can benefit from a solution that includes PowerLogic WT4100/4200 series meters:
• Buildings
• Industry
• Healthcare
• Data centre and networks
• Infrastructure

Benefits
System integrators’ benefit
• Ease of integration
• Ease of setup
• Cost effectiveness

Panel builders’ benefit
• Ease of installation
• Cost effectiveness
• Aesthetically pleasing
• Simplified ordering

End users’ benefit
• Ease of use
• Precision metering & sub-billing
• Billing flexibility
• Comprehensive, consistent and superior performance

Competitive advantages
• Easy to install and operate
• Reduced wiring and maintenance costs
• Water flowmeter fast magnetic connection
• Effective in hazardous or explosive environments
• Wireless repeaters multiply transmission distances

Power management solutions
Schneider Electric provides innovative power management solutions to increase your energy efficiency and cost savings, maximise electrical network reliability and availability, and optimise electrical asset performance.

Conformity of standards
• IEC 61557-12
• IEC 62053-22
• IEC 62053-24
• IEC 61010-1
• IEC 61000-4-2
• IEC 61000-4-3
• IEC 61000-4-4
• IEC 61000-4-5
• IEC 61000-4-6
• IEC 61000-4-8
This long-range radio frequency (RF) wireless solution consists of transmitters and a receiver. Typically, repeaters are also installed and located between the transmitter and receiver to boost the transmission signal when the line-of-sight distance between the transmitter and receiver is greater than the transmitter’s range.

Physical obstructions, such as buildings, reduce the effective transmission range of a transmitter, so repeaters are also installed in these situations. The wireless devices are grouped according to model numbers, and these identify a device’s RF transmission frequency. It is common for countries to limit RF transmission to a specific radio frequency.

- WT4200 series, WR4200 series, WA4200 series, 169 MHz for Europe
- WT4100 series, WR4100 series, WA4100 series, 153 MHz for USA and Canada

(Before installing and operating the wireless devices, check the rules and restrictions on RF transmission for your country and make sure your devices’ transmission frequency matches the allowed radio frequency.)

### Main components

- **Transmitter Pulse counters** - This Modbus device pulse counter transmitter detects and counts pulses from a meter’s pulse output. It can count pulses with a 0.1 to 10 Hz frequency and the value is transmitted once every 15 minutes.
- **Water pit pulse counter** - Designed for use with a water flowmeter and is easily installed by magnetic force to cast-iron covers.
- **ATEX-rated pulse counter** - Designed for use with devices such as a gas meter, compliant with ATEX II 3G and Ex ic II A T3 for use in hazardous or explosive environments.
- **Receiver** - The gateway between sensors (transmitters) and the Modbus network. Data can be accessed via Modbus using a Com’X or EGX gateway device.
- **Wireless repeater** - this device extends the operating range between transmitters and receivers.
