

What's new in PowerLogic™ PM5500 firmware version 2.4.2

This Document outlines the new and updated features in firmware version 2.4.2 (V02.04.02) for the PowerLogic PM5560 and PM5563 meters.

Additional information and resources

Visit www.schneider-electric.com to download the firmware upgrade files and related resources. You may find the below set of information on the Schneider Electric website:

- Firmware upgrade files
- Latest version of ION Setup to support the new features
- Latest user manual, datasheets, and installation sheets

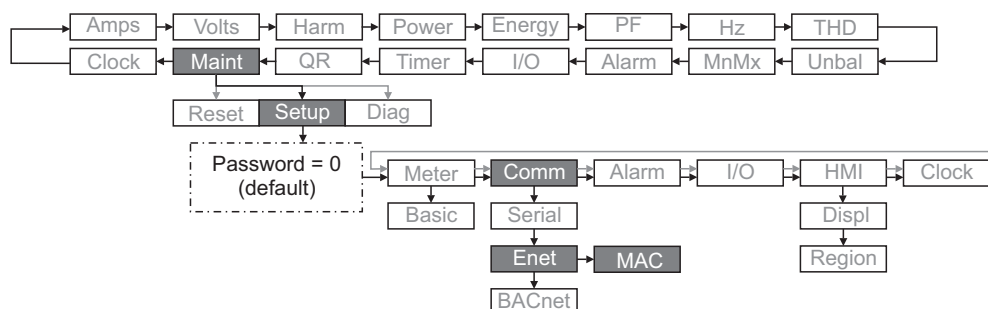

Self discovery over Ethernet

The meter supports DPWS (Devices Profile for Web Services) which allows self-discovery of the meter when it is connected to the local area network.

When you connect the meter to network, it automatically appears in the network under Windows Explorer > Other Devices. The meter is named <meter type>_<Last six digits of MAC address> by default.

MAC ID displayed on HMI

All PM5500 meters are assigned with a factory programmed unique MAC address. This address can be viewed through HMI.
