

Restoration of temporarily disabled configuration settings in webpages

For the meter models with firmware versions mentioned in column (B) of table, the configuration settings and login requirements in the webpages have been limited to meet updated cybersecurity best practices. With additional cybersecurity measures incorporated into the product, the functionalities have now been restored with the latest firmware versions mentioned in column (C) of table.

NOTE: If your meter is presently running on firmware version mentioned in columns (A) or (B) of table, upgrade your meter to the latest released version of firmware as mentioned in column (C) of table to enhance your product's cybersecurity and to use all the features of the webpages (Refer to Firmware upgrades, page 203).

NOTE:

- For the meter models with the firmware versions mentioned in column (B) of table, the **HTTP** service is accessible without user credentials.
- To access **FTP** service, navigate to **Maint > Setup > Comm > Enet** and set the **FTP** parameter to **Enabled** using the meter's display.

Meter models and firmware versions

Meter models	Firmware version series		
	(A) No webpage limitations	(B) Webpage limitations	(C) No webpage limitations
PM5560	2.7.7 and earlier	2.7.8 to 2.9.9	4.0.0 and above
PM5563	Not applicable		
PM5580	2.7.7 and earlier		
PM5562	2.5.4 and earlier	Not applicable	4.0.0 and above*
PM5650	Not applicable	2.10.0 to 2.12.9	4.10.0 and above*
PM5570	Not applicable	3.0.0 to 3.2.9	6.0.0 and above*
PM5660			
PM5760			
PM5561	Not applicable	10.7.3 to 10.9.9	12.0.0 and above*
PM5661	Not applicable	11.0.0 to 11.2.9	14.0.0 and above*
PM5761
