

An aerial night photograph of a large cable-stayed bridge, likely the Zhongshan Bridge in Shanghai. The bridge's main pylon and its supporting cables are highlighted with a bright green neon-like glow. The bridge spans a body of water, with city lights and other bridges visible in the background under a dark, cloudy sky.

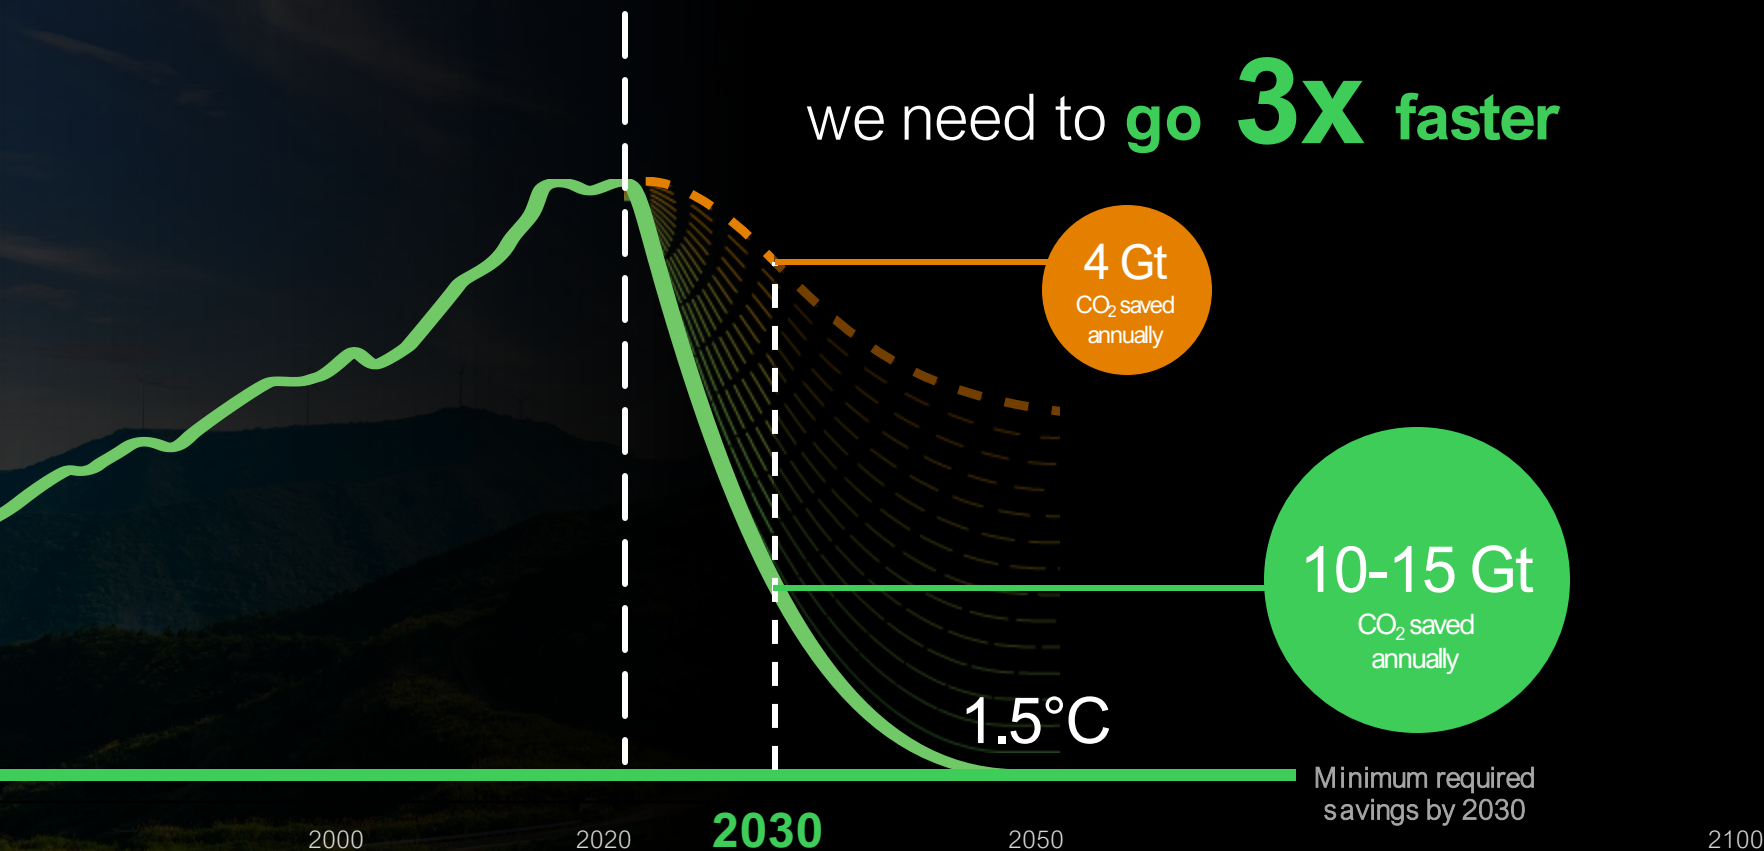

Powering the New Electric Economy

Zheng YIN

Executive Vice President, China & East Asia Operations
Schneider Electric

A photograph of a wind farm on a lush green hill. Several wind turbines are visible, with one in the foreground being the most prominent. The background shows more hills and a clear sky with some light clouds. The overall tone is bright and positive, emphasizing sustainability.

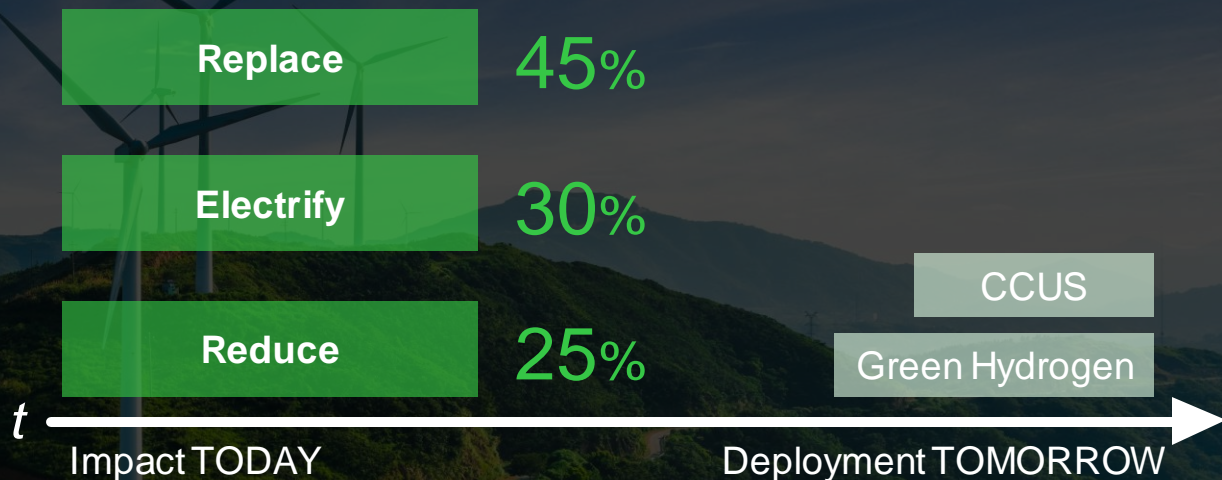

Our mission is to be
your digital partner
for sustainability and efficiency

Global Carbon Budget (2019); IPCC (2020), ETC, Making clean electrification possible (2021), Schneider Electric Research Institute
View includes industry process emissions, changes in land uses, such as deforestation

Despite challenges, **1.5°C is within reach** using **technology that exists today**

We can get
on track
for **net zero**
by **2050**

Innovating for a more **sustainable** Thailand

Digital

- Digital Intelligence for resilient operations
- Opportunities to tap into the future
- End-to-end software lifecycle

Electric

- Electrify to decarbonize
- Future ready innovations
- Efficient and sustainable

Sustainable

- Green innovation
- Circular certified
- Technology in action

Efficient

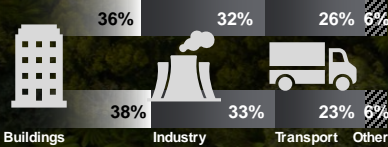

- Ease of use to increase connectivity
- End to end integrations
- Sustainability in practice

- Digital intelligence for resilient operations
- Opportunities to tap into the future
- End-to-end software lifecycle

Digital makes the invisible visible, eliminating waste and driving efficiency

Share of Global Energy Use

Share of Global CO₂ Emissions

Buildings¹ use **more energy** and produce **more CO₂** than any other sector

20-30%
Carbon Abatement

20-35%
Energy Savings

Digital technologies **save energy and carbon** across the entire existing building stock

5 Years

Paybacks are generally well below 8 years; **hospital & retail sectors** offer most attractive paybacks, at well below **5 years**

Paybacks for incorporating digital technologies into buildings are generally relatively **short**

Source(s): Schneider Electric Sustainability Research Institute

¹ Buildings sector includes residential, non-residential, and building construction

We drive efficiency & sustainability through life cycle digitalization

- Efficient and sustainable

Electricity makes energy green

Efficiency of energy forms **end-to-end**

(based on data extracted from World Energy Outlook 2019, in TWh)

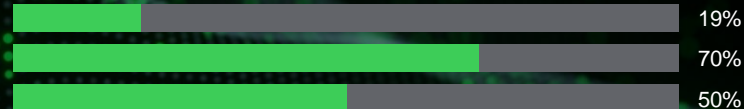

: Fossil Fuels
 : Other Energy Forms
 : Renewables (Wind, Solar, Other Renewables)

Direct fossil fuel uses incur ~2/3 of efficiency losses from primary to useful energy

FOSSIL FUEL (DIRECT USE)	Primary Energy	Final Energy	Useful Energy
Oil	1	0.94	0.19
Natural Gas	1	0.82	0.70
Coal	1	0.72	0.50

ROUND-TRIP EFFICIENCY

Once generated, electricity incurs only ~5% of losses in transmission & distribution

ELECTRICITY

Natural Gas	1	0.33	0.31
Coal	1	0.33	0.31
Bioenergy	1	0.33	0.31
Nuclear	1	0.33	0.31
Hydro	1	1	0.95
Solar, wind, other renewables	1	1	0.95

Electricity generated with renewables are almost **100% efficient** end-to-end

All energy forms	1	0.70	0.40

UOC system covers 10 subsystems, allowing all-time monitoring of all valuable assets throughout 10+ Industrial Estates

Energy Optimization

Reduce operating costs and workload of employees

75t CO₂e

Reduction per year of direct GHG (Scope 1) from reduction of travel

The Versailles 10X10:

10 Actions to Accelerate Energy Efficiency 10X faster

1. Measure & Diagnose

Digitize consumption, connect and report in app for outcome-based performance

2. Awareness & Knowledge

Share practical applications, one-stop-shop advisories, and lighthouse examples

3. Skills

Upskill, reskill and increase resources to enable the transition, support Energy Service Company creation

4. Total Cost of Ownership

Total cost of ownership (TCO) for designers/architects and decision making on projects

5. Financing Gap

Bridge the gap between green capital expenditures (CapEx) to save brown operating expenditures (OpEx)

6. Government as a role model

Government buildings, infrastructure to lead by example

7. Regulation

Privilege incentive to stick, outcome-based incentives. If leveraging coercive technique, allow a predictable and long enough horizon

8. Reinforce the Grid

Need transmission lines faster to access renewables, especially in industrial applications

9. Big Items, Existing Tech

Start with the biggest-stake items, deploying what we have with the cheapest solutions

10. Build New Net Zero

Leverage existing, available technology for net-zero new builds
