## What is the Com'X 510?

### Data logger

Collects and stores energy data from up to 64 field devices, connected to either:

- > Ethernet TCP/IP field network
- > Modbus Serial line network
- > Embedded digital and analogue inputs

### Embedded energy management software

The Com'X 510 provides the end-user with immediate visibility of energy consumption throughout a site. Once the Com'X is connected to the Local Area Network, real-time data and historical data can be viewed via any standard web browser in tabular, summary, bar and trending formats.

### Data publisher

Batches of collected and stored data can also be periodically transmitted to an internet server as XML and CSV files.

### Gateway

If the gateway option is selected, the Com'X 510 can ensure that the data from connected devices is available in real time.

## Catalogue numbers

Product ordering reference	Product description
EBX200	Com'X 200 data logger (24 V DC or 230 V AC power supplied )
