Overview

Schneider Electric is aware of a vulnerability in the Schneider Electric EcoStruxure Geo SCADA Expert product.

EcoStruxure Geo SCADA Expert software is an integrated, scalable and reliable Supervisory Control and Data Acquisition (SCADA) software with ready-to-use telemetry features optimized for managing remote assets spread across geographically dispersed infrastructure.

Failure to apply the remediations provided below may risk the revealing of account credentials, which could result in unauthorized system access.

Vulnerability Details

CVE ID: **CVE-2020-28219**

A CWE-522: Insufficiently Protected Credentials vulnerability exists that could cause exposure of credentials to server-side users when web users are logged in to Virtual ViewX.

Remediation

### EcoStruxure Geo SCADA Expert 2020

The Monthly Updates from October 2020, 83.7613.1 include a fix for this vulnerability. Software is available for download here: [https://tprojects.schneider-electric.com/telemetry/display/CS/Geo+SCADA+Expert+Downloads](https://tprojects.schneider-electric.com/telemetry/display/CS/Geo+SCADA+Expert+Downloads)

If Virtual ViewX is on a separate server from the Geo SCADA Server, then only Virtual ViewX software requires installation, although it is recommended to keep both up to date. If on the same server as the Geo SCADA Server then both components require update. Software updates may require reboots as requested.

This software update makes changes to the Virtual ViewX settings which can be performed manually. To do this and verify that the settings are in place, refer to the mitigation steps below.

Customers should use appropriate patching methodologies when applying these patches to their systems. We strongly recommend the use of back-ups and evaluating the impact of these patches in a Test and Development environment or on an offline infrastructure. Contact Schneider Electric’s [Customer Care Center](#) if you need assistance removing a patch.

The steps to remediate this vulnerability are automatically applied by the October Monthly Updates. If customers choose not to update to the latest software, they should immediately follow these steps:

1. From the Virtual ViewX Manager app, select the 'Applications' tab.
2. Double-click the Virtual ViewX application in the list.
3. Then uncheck the setting 'Allow Browser Arguments'.
4. Finally click OK, then Apply and Close.

### General Security Recommendations

We strongly recommend the following industry cybersecurity best practices.

- Locate control and safety system networks and remote devices behind firewalls and isolate them from the business network.
- Install physical controls so no unauthorized personnel can access your industrial control and safety systems, components, peripheral equipment, and networks.
- Place all controllers in locked cabinets and never leave them in the “Program” mode.
- Never connect programming software to any network other than the network for the devices that it is intended for.
- Scan all methods of mobile data exchange with the isolated network such as CDs, USB drives, etc. before use in the terminals or any node connected to these networks.
- Never allow mobile devices that have connected to any other network besides the intended network to connect to the safety or control networks without proper sanitation.
- Minimize network exposure for all control system devices and systems and ensure that they are not accessible from the Internet.
When remote access is required, use secure methods, such as Virtual Private Networks (VPNs). Recognize that VPNs may have vulnerabilities and should be updated to the most current version available. Also, understand that VPNs are only as secure as the connected devices.

For more information refer to the Schneider Electric Recommended Cybersecurity Best Practices document.

For More Information

This document provides an overview of the identified vulnerability or vulnerabilities and actions required to mitigate. For more details and assistance on how to protect your installation, contact your local Schneider Electric representative or Schneider Electric Industrial Cybersecurity Services. These organizations will be fully aware of this situation and can support you through the process.

About Schneider Electric

At Schneider, we believe access to energy and digital is a basic human right. We empower all to do more with less, ensuring Life Is On everywhere, for everyone, at every moment.

We provide energy and automation digital solutions for efficiency and sustainability. We combine world-leading energy technologies, real-time automation, software and services into integrated solutions for Homes, Buildings, Data Centers, Infrastructure and Industries.
We are committed to unleash the infinite possibilities of an open, global, innovative community that is passionate with our Meaningful Purpose, Inclusive and Empowered values.
