10 August 2021

Overview

Schneider Electric is aware of a vulnerability in its Pro-face GP-Pro EX product.

The Pro-face GP-Pro EX product is an HMI Screen Editor & Logic Programming Software.

Failure to apply the remediations provided below may risk software hijacking, which could result in code execution with elevated privileges during software install.

Affected Product and Versions

GP-Pro EX V4.09.250 and prior

Vulnerability Details

CVE ID: CVE-2021-22775

A CWE-427: Uncontrolled Search Path Element vulnerability exists that could cause local code execution with elevated privileges when installing the software.

Remediation

V4.09.300 of the Pro-face GP-Pro EX product includes a fix for this vulnerability and is available for download here:

Customers should use appropriate patching methodologies when applying these patches to their systems. We strongly recommend the use of back-ups and evaluating the impact of these patches in a Test and Development environment or on an offline infrastructure. Contact the Pro-face Customer Care Center if you need assistance removing a patch.

In addition to the remediation provided above, customers should also apply the following mitigations to reduce the risk of exploit:

- Restrict access to the system to only authorized users
- Ensure that proper access rights are granted based on the least privilege principle to limit access to the installation files to only authorized users.
- Compute a hash of the GP-Pro EX ISO files downloaded and check the consistency of this hash with the one available at the download location on Pro-face website.
General Security Recommendations

We strongly recommend the following industry cybersecurity best practices.

- Locate control and safety system networks and remote devices behind firewalls and isolate them from the business network.
- Install physical controls so no unauthorized personnel can access your industrial control and safety systems, components, peripheral equipment, and networks.
- Place all controllers in locked cabinets and never leave them in the “Program” mode.
- Never connect programming software to any network other than the network for the devices that it is intended for.
- Scan all methods of mobile data exchange with the isolated network such as CDs, USB drives, etc. before use in the terminals or any node connected to these networks.
- Never allow mobile devices that have connected to any other network besides the intended network to connect to the safety or control networks without proper sanitation.
- Minimize network exposure for all control system devices and systems and ensure that they are not accessible from the Internet.
- When remote access is required, use secure methods, such as Virtual Private Networks (VPNs). Recognize that VPNs may have vulnerabilities and should be updated to the most current version available. Also, understand that VPNs are only as secure as the connected devices.

For more information refer to the Schneider Electric Recommended Cybersecurity Best Practices document.
