

## Schneider Electric Security Notification

### EcoStruxure™ Control Expert, EcoStruxure™ Process Expert and Modicon PLCs (Programmable Logic Controllers) and PACs (Programmable Automation Controllers)

10 January 2023 (11 April 2023)

#### Overview

Schneider Electric is aware of multiple vulnerabilities in its [EcoStruxure™ Control Expert](#), [EcoStruxure™ Process Expert](#) and [Modicon PLCs \(Programmable Logic Controllers\) and PACs \(Programmable Automation Controllers\)](#).

[Modicon PLCs \(Programmable Logic Controllers\) and PACs \(Programmable Automation Controllers\)](#) control and monitor industrial operations in a sustainable, flexible, efficient, and protected way. [EcoStruxure™ Control Expert](#) is the common programming, debugging and operating software for [Modicon PLCs \(Programmable Logic Controllers\) and PACs \(Programmable Automation Controllers\)](#). The [EcoStruxure™ Process Expert](#) DCS is a single automation system to engineer, operate, and maintain your entire infrastructure for a sustainable, productive and market-agile plant.

Failure to apply the remediations provided below may risk unauthorized access to your PLC, which could result in the possibility of denial of service and loss of confidentiality, integrity of the controller.

**April 2023 Update:** A remediation for Modicon M340 is available for download ([page 2](#)). The qualitative severity rating of this vulnerability was corrected to “high” to reflect the CVSS Base score.

#### Affected Products and Versions

| Product  | Version                  |
|--|--------------------------|
| EcoStruxure™ Control Expert                                  | Versions prior to V15.3  |
| EcoStruxure™ Process Expert                                  | Version V2020 & prior    |
| Modicon M340 CPU (part numbers BMXP34*)                      | Version prior to SV3.51  |
| Modicon M580 CPU (part numbers BMEP* and BMEH*)              | Versions prior to SV4.10 |
| Modicon M580 CPU Safety (part numbers BMEP58*S and BMEH58*S) | All Versions             |
| Modicon Momentum Unity M1E Processor (171CBU*)               | Versions prior to SV2.6  |
| Modicon MC80 (BMKC80)  | All Versions             |

## Schneider Electric Security Notification

|   |              |
|---|--------------|
| Legacy Modicon Quantum (140CPU65*) and Premium CPUs (TSXP57*) | All Versions |
|---|--------------|

## Vulnerability Details

CVE ID: **CVE-2022-45788**

CVSS v3.1 Base Score 7.5 | High | CVSS:3.1/AV:N/AC:H/PR:N/UI:R/S:U/C:H/I:H/A:H

A *CWE-754: Improper Check for Unusual or Exceptional Conditions* vulnerability exists that could cause arbitrary code execution, denial of service and loss of confidentiality & integrity when a malicious project file is loaded onto the controller.

*Note regarding vulnerability details: The severity of vulnerabilities was calculated using the CVSS Base metrics in version 3.1 ([CVSS v3.1](#)) without incorporating the Temporal and Environmental metrics. Schneider Electric recommends that customers score the CVSS Environmental metrics, which are specific to end-user organizations, and consider factors such as the presence of mitigations in that environment. Environmental metrics may refine the relative severity posed by the vulnerabilities described in this document within a customer's environment.*

## Remediation

| Affected Product & Version   | Remediation   |
|--|---|
| <b>EcoStruxure™ Process Expert</b><br><i>Versions prior to V2021</i>   | EcoStruxure™ Process Expert V2021, available for download below, is not impacted by this vulnerability as the affected component has been removed from this version:<br><a href="https://www.se.com/ww/en/product-range/65406-ecostruxure-process-expert/#software-and-firmware">https://www.se.com/ww/en/product-range/65406-ecostruxure-process-expert/#software-and-firmware</a> |
| <b>EcoStruxure™ Control Expert</b><br><i>Versions prior to V15.3</i>   | Software V15.3 includes a fix for this vulnerability and is available for download here:<br><a href="https://www.se.com/ww/en/download/document/EcoStruxureControlExpert-V15.3/">https://www.se.com/ww/en/download/document/EcoStruxureControlExpert-V15.3/</a>   |
| <b>Modicon M580</b><br><b>(part numbers BMEP* and BMEH*, excluding M580 CPU Safety)</b><br><i>Versions prior to SV4.10</i> | Firmware SV4.10 includes a fix for this vulnerability and is available for download here:<br><a href="https://www.se.com/ww/en/download/document/BMEx58x0x0_SV04.10/">https://www.se.com/ww/en/download/document/BMEx58x0x0_SV04.10/</a>  |
| <b>Modicon Momentum Unity M1E Processor</b> (part numbers 171CBU*) <i>Versions prior to VS2.6</i>                          | Firmware SV2.6 includes a fix for this vulnerability and is available for download here:<br><a href="https://www.se.com/ww/en/download/document/Momentum_FW_update/">https://www.se.com/ww/en/download/document/Momentum_FW_update/</a>   |

## Schneider Electric Security Notification

**Modicon Modicon M340 CPU (part numbers BMXP34\*)**  
*Versions prior to SV3.51*

Firmware SV3.51 includes a fix for this vulnerability and is available for download here:  
<https://www.se.com/ww/en/product-range/1468-modicon-m340/#software-and-firmware>

Customers should use appropriate patching methodologies when applying these patches to their systems. We strongly recommend the use of back-ups and evaluating the impact of these patches in a Test and Development environment or on an offline infrastructure. Contact Schneider Electric's [Customer Care Center](#) if you need assistance removing a patch.

### Mitigations

| Affected Product & Version  | Mitigations   |
|---|---|
| <b>EcoStruxure™ Control Expert</b><br><i>All Versions</i>                                 | <p>If customers choose not to apply the remediation, it is recommended to apply the following mitigations to reduce the risk of the exploit:</p> <p>Setup a VPN between the Modicon PLC controllers and the engineering workstation containing EcoStruxure™ Control Expert. Note: this functionality may be provided by an external IPSEC compatible firewall located close to the controller.</p> <p>Harden the workstation running EcoStruxure™ Control Expert.</p> <p>It is recommended to enable the file encryption feature for all new projects.</p> <p>Encrypt project files when stored and restrict the access to only trusted users.</p> <p>When exchanging files over the network, use secure communication protocols.</p> <p>Only open project files received from trusted source, and it is recommended to share project files only when configured with the encryption feature described above.</p> <p>Compute a hash of the project files and regularly check the consistency of this hash to verify the integrity before usage.</p> |
| <b>EcoStruxure™ Process Expert</b><br><i>V2020 and prior</i>                              | <p>If customers choose not to apply the remediation, it is recommended to apply the following mitigations to reduce the risk of the exploit:</p> <p>Setup a VPN between the Modicon PLC controllers and the engineering workstation containing EcoStruxure™ Process Expert. Note: this functionality may be provided by an external IPSEC compatible firewall located close to the controller.</p> <p>Encrypt project files when stored and restrict the access to only trusted users.</p> <p>When exchanging files over the network, use secure communication protocols.</p> <p>Only open project files received from trusted source.</p> <p>Compute a hash of the project files and regularly check the consistency of this hash to verify the integrity before usage.</p> <p>Harden the workstation running EcoStruxure™ Process Expert.</p>   |
| <b>Modicon Modicon M340 CPU (part numbers BMXP34*)</b><br><i>Versions prior to SV3.51</i> | <p>If customers choose not to apply the remediation, it is recommended to apply the following mitigations to reduce the risk of the exploit:</p> <ul style="list-style-type: none"> <li>• Setup an application password in the project properties</li> <li>• Setup network segmentation and implement a firewall to block all unauthorized access to port 502/TCP</li> </ul>  |

### General Security Recommendations

We strongly recommend the following industry cybersecurity best practices.

- Locate control and safety system networks and remote devices behind firewalls and isolate them from the business network.
- Install physical controls so no unauthorized personnel can access your industrial control and safety systems, components, peripheral equipment, and networks.
- Place all controllers in locked cabinets and never leave them in the “Program” mode.
- Never connect programming software to any network other than the network intended for that device.
- Scan all methods of mobile data exchange with the isolated network such as CDs, USB drives, etc. before use in the terminals or any node connected to these networks.
- Never allow mobile devices that have connected to any other network besides the intended network to connect to the safety or control networks without proper sanitation.
- Minimize network exposure for all control system devices and systems and ensure that they are not accessible from the Internet.
- When remote access is required, use secure methods, such as Virtual Private Networks (VPNs). Recognize that VPNs may have vulnerabilities and should be updated to the most current version available. Also, understand that VPNs are only as secure as the connected devices.

For more information refer to the Schneider Electric [Recommended Cybersecurity Best Practices](#) document.

### Acknowledgements

Schneider Electric recognizes the following researchers for identifying and helping to coordinate a response to this vulnerability:

| CVE            | Researchers   |
|----------------|---|
| CVE-2022-45788 | Jos Wetzels and Daniel dos Santos, Forescout Technologies |

### For More Information

## Schneider Electric Security Notification

This document provides an overview of the identified vulnerability or vulnerabilities and actions required to mitigate. For more details and assistance on how to protect your installation, contact your local Schneider Electric representative or Schneider Electric Industrial Cybersecurity Services: <https://www.se.com/ww/en/work/solutions/cybersecurity/>. These organizations will be fully aware of this situation and can support you through the process.

For further information related to cybersecurity in Schneider Electric's products, visit the company's cybersecurity support portal page:  
<https://www.se.com/blue/en/work/support/cybersecurity/overview.jsp>

### About Schneider Electric

Schneider's purpose is to empower all to make the most of our energy and resources, bridging progress and sustainability for all. We call this Life Is On.

Our mission is to be your digital partner for Sustainability and Efficiency.

We drive digital transformation by integrating world-leading process and energy technologies, end-point to cloud connecting products, controls, software and services, across the entire lifecycle, enabling integrated company management, for homes, buildings, data centers, infrastructure and industries.

We are the most local of global companies. We are advocates of open standards and partnership ecosystems that are passionate about our shared Meaningful Purpose, Inclusive and Empowered values.
