Overview

Schneider Electric is aware of a vulnerability in its EcoStruxure™ Geo SCADA Expert software product, formerly known as ClearSCADA. The EcoStruxure™ Geo SCADA Expert product is an open, flexible and scalable software for telemetry and remote SCADA solutions.

If successfully exploited, bad actors could arbitrarily inject text entries into product log files, including falsified entries, or filling the log files with bad data.

Failure to apply the remediation provided below may risk the compromise of product log files.

Affected Products and Versions

Vulnerability Details

CVE ID: CVE-2023-0595

CVSS v3.1 Base Score 5.3 | Medium | CVSS:3.1/AV:N/AC:L/PR:N/UI:N/S:U/C:N/I:L/A:N

A CWE-117: Improper Output Neutralization for Logs vulnerability exists that could cause the misinterpretation of log files when malicious packets are sent to the Geo SCADA server's database web port (default 443).
Remediation

<table>
<thead>
<tr>
<th>Affected Product &amp; Version</th>
<th>Remediation</th>
</tr>
</thead>
<tbody>
<tr>
<td>ClearSCADA (previous product name) All Versions</td>
<td>Please read the product documentation to understand how to set up client and server certificates and how to configure connections to restrict to client versions supporting certificates. The documentation also states how to verify the installed version.</td>
</tr>
</tbody>
</table>

Customers should use appropriate patching methodologies when applying these patches to their systems. We strongly recommend the use of back-ups and evaluating the impact of these patches in a Test and Development environment or on an offline infrastructure. Contact Schneider Electric’s [Customer Care Center](https://community.se.com) if you need assistance removing a patch.

If customers choose not to apply the remediation provided above, they should immediately apply the following mitigations to reduce the risk of exploit.

Mitigations

<table>
<thead>
<tr>
<th>Affected Product &amp; Version</th>
<th>Mitigations</th>
</tr>
</thead>
</table>
| EcoStruxure™ Geo SCADA Expert 2019, EcoStruxure™ Geo SCADA Expert 2020, EcoStruxure™ Geo SCADA Expert 2021 All Versions prior to October 2022 | To mitigate these vulnerabilities, we recommend restricting access to the Geo SCADA server's database web port (default 443). Access should be available only to ViewX and WebX clients.
Refer to the Geo SCADA Expert Help documentation for advice and best practices for putting networks and remote devices behind firewalls and isolating them from the business network and public networks. Specific advice is listed below:
- Configure the Geo SCADA Server’s Client Access Control list, which prevents unauthorized IP addresses from connecting. |
| ClearSCADA (previous product name) All Versions | We recommend upgrading to the software versions listed in the section above. Customers using ClearSCADA should also upgrade. |

General Security Recommendations

We strongly recommend the following industry cybersecurity best practices.

- Locate control and safety system networks and remote devices behind firewalls and isolate them from the business network.
- Install physical controls so no unauthorized personnel can access your industrial control and safety systems, components, peripheral equipment, and networks.
- Place all controllers in locked cabinets and never leave them in the “Program” mode.
- Never connect programming software to any network other than the network intended for that device.
- Scan all methods of mobile data exchange with the isolated network such as CDs, USB drives, etc. before use in the terminals or any node connected to these networks.
- Never allow mobile devices that have connected to any other network besides the intended network to connect to the safety or control networks without proper sanitation.
- Minimize network exposure for all control system devices and systems and ensure that they are not accessible from the Internet.
- When remote access is required, use secure methods, such as Virtual Private Networks (VPNs). Recognize that VPNs may have vulnerabilities and should be updated to the most current version available. Also, understand that VPNs are only as secure as the connected devices.

For more information refer to the Schneider Electric Recommended Cybersecurity Best Practices document.

Acknowledgements

Schneider Electric recognizes the following researcher for identifying and helping to coordinate a response to this vulnerability:

About Schneider Electric

Schneider’s purpose is to empower all to make the most of our energy and resources, bridging progress and sustainability for all. We call this Life Is On.

Our mission is to be your digital partner for Sustainability and Efficiency.

We drive digital transformation by integrating world-leading process and energy technologies, end-point to cloud connecting products, controls, software and services, across the entire lifecycle, enabling integrated company management, for homes, buildings, data centers, infrastructure and industries.

We are the most local of global companies. We are advocates of open standards and partnership ecosystems that are passionate about our shared Meaningful Purpose, Inclusive and Empowered values. www.se.com
