

Schneider Electric Security Notification

Improper Control of Generation of Code ('Code Injection') vulnerability on EcoStruxure™ Automation Expert

10 March 2026

Overview

Schneider Electric is aware of a vulnerability in its EcoStruxure™ Automation Expert product.

The [EcoStruxure™ Automation Expert](#) product is plant automation software designed for digital control systems in discrete, hybrid and continuous industrial processes. A totally integrated automation solution designed to enhance your flexibility, efficiency and scalability.

Failure to apply the remediation provided below may risk execution of arbitrary commands on the engineering workstation, which could result in a potential compromise of full system.

Affected Products and Versions

Product	Version
EcoStruxure™ Automation Expert	Versions prior to v25.0.1

Vulnerability Details

CVE ID: **CVE-2026-2273**

CVSS v3.1 Base Score 8.2 | High | CVSS:3.1/AV:L/AC:L/PR:L/UI:R/S:C/C:H/I:H/A:H

CVSS v4.0 Base Score 7.2 | High | CVSS:4.0/AV:L/AC:L/AT:N/PR:L/UI:A/VC:L/VI:H/VA:L/SC:H/SI:H/SA:H

CWE-94: Improper Control of Generation of Code ('Code Injection') vulnerability exist that could cause execution of untrusted commands on the engineering workstation which could result in a limited compromise of the workstation and a potential loss of Confidentiality, Integrity and Availability of the subsequent system when an authenticated user opens a malicious project file.

The severity of vulnerabilities was calculated using the CVSS Base metrics for 4.0 ([CVSS v4.0](#)). CVSS v3.1 will be still evaluated until the adoption of CVSS v4.0 by the industry. The severity was calculated without incorporating the Temporal and Environmental metrics. Schneider Electric recommends that customers score the CVSS Environmental metrics, which are specific to end-user organizations, and consider factors such as the presence of mitigations in that environment. Environmental metrics may refine the relative severity posed by the vulnerabilities described in this document within a customer's environment.

Schneider Electric Security Notification

Remediation

Affected Product & Version	Remediation
EcoStruxure™ Automation Expert <i>Versions prior to v25.0.1</i>	Version v25.0.1 of EcoStruxure™ Automation Expert includes a fix for this vulnerability and is available for download here: https://www.se.com/ww/en/product-range/23643079-ecostruxure-automation-expert/

Customers should use appropriate patching methodologies when applying these patches to their systems. We strongly recommend the use of back-ups and evaluating the impact of these patches in a Test and Development environment or on an offline infrastructure. Contact Schneider Electric's [Customer Care Center](#) if you need assistance removing a patch.

If customers choose not to apply the remediation provided above, they should immediately apply the following mitigations to reduce the risk of exploit:

Mitigations

Affected Product & Version	Mitigations
EcoStruxure™ Automation Expert <i>Versions prior to v25.0.1</i>	<p>Solution and archive files must be stored within the user's home directory or in any location protected by appropriate Windows file-system access controls to prevent unauthorized access in multi-user environments. Users who choose to store files outside their home directory are responsible for applying restrictive Windows permissions to secure those locations.</p> <p>Before opening any solution or archive file, users are required to verify its authenticity and ensure that it has not been modified by unauthorized users.</p> <p>For detailed mitigation steps, refer to the User Manual - https://product-help.se.com/EcoStruxure%20Automation%20Expert/25.0/Offer%20Guides/en-US/EAE_UM?t=EAE_UM%2FSolutionIntegrity-FE037ED3.html%3Frhlterm%3Dundefined%253Frhsearch%253Dundefined&theme=Help</p>

To ensure you are informed of all updates, including details on affected products and remediation plans, subscribe to Schneider Electric's security notification service here:

General Security Recommendations

We strongly recommend the following industry cybersecurity best practices.

- Locate control and safety system networks and remote devices behind firewalls and isolate them from the business network.
- Install physical controls so no unauthorized personnel can access your industrial control and safety systems, components, peripheral equipment, and networks.
- Place all controllers in locked cabinets and never leave them in the “Program” mode.
- Never connect programming software to any network other than the network intended for that device.
- Scan all methods of mobile data exchange with the isolated network such as CDs, USB drives, etc. before use in the terminals or any node connected to these networks.
- Never allow mobile devices that have connected to any other network besides the intended network to connect to the safety or control networks without proper sanitation.
- Minimize network exposure for all control system devices and systems and ensure that they are not accessible from the Internet.
- When remote access is required, use secure methods, such as Virtual Private Networks (VPNs). Recognize that VPNs may have vulnerabilities and should be updated to the most current version available. Also, understand that VPNs are only as secure as the connected devices.

For more information refer to the Schneider Electric [Recommended Cybersecurity Best Practices](#) document.

Acknowledgements

Schneider Electric recognizes the following researcher for identifying and helping to coordinate a response to this vulnerability:

CVE	Researchers
CVE-2026-2273	Raffaele Bova at Nozomi Networks

For More Information

This document provides an overview of the identified vulnerability or vulnerabilities and actions required to mitigate. For more details and assistance on how to protect your installation, contact your local Schneider Electric representative or Schneider Electric Industrial Cybersecurity Services:

<https://www.se.com/ww/en/work/solutions/cybersecurity/>. These organizations will be fully aware of this situation and can support you through the process.

For further information related to cybersecurity in Schneider Electric’s products, visit the company’s cybersecurity support portal page: <https://www.se.com/ww/en/work/support/cybersecurity/overview.jsp>

About Schneider Electric

Schneider’s purpose is to **create Impact** by empowering all **to make the most of our energy and resources**, bridging progress and sustainability for all. We call this Life Is On.

Our mission is to be the trusted partner in **Sustainability and Efficiency**.

We are a **global industrial technology leader** bringing world-leading expertise in electrification, automation and digitization to smart **industries**, resilient **infrastructure**, future-proof **data centers**, intelligent **buildings**, and intuitive **homes**. Anchored by our deep domain expertise, we provide integrated end-to-end lifecycle AI enabled Industrial IoT solutions with connected products, automation, software and services, delivering digital twins to enable profitable growth **for our customers**.

We are a **people company** with an ecosystem of 150,000 colleagues and more than a million partners operating in over 100 countries to ensure proximity to our customers and stakeholders. We embrace **diversity and inclusion** in everything we do, guided by our meaningful purpose of a **sustainable future for all**.
