This is a co-report base on the original report 101117CTA01, EUT in this report is identical as the one in original, only different is the model name changed. And the applicant and holder of the report are different as the original report. All test data were refer to the original report 101117CTA01.

## 2.1 MEASUREMENT UNCERTAINTY

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the EUT as specified in CISPR 16-4-2 Ed 1.0.

This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

This lab's measurement uncertainty  $U_{Lab}$ , is low than  $U_{Cispr}$ , Table 1 – Values of  $U_{Cispr}$  of CISPR 16-4-2 Ed. 1.0, therefore compliance is deemed to occur if no measured disturbance exceeds the disturbance limit.

Measurement	Value
Conducted emissions	2.55 dB
Conducted emissions at telecom port	2.60 dB
Radiated emissions	30 MHz ~ 1GHz
	Above 1GHz
	3.22 dB
	2.89 dB

2. Correction Factor (dB/m) = Antenna Factor (dB/m) + Cable Factor (dB)
3. The other emission levels were very low against the limit.
4. Margin value = Emission level – Limit value.
