Intelligent Containment Solutions that Increase Data Center Cooling Efficiency while Protecting Critical IT Equipment and Personnel.
EcoAisle Containment

Hot and cold air containment systems designed to maximize cooling predictability, capacity, and efficiency at the rack, row or room level

The EcoAisle minimizes the hot and cold air mixing within the IT environment.

An unpredictable data center environment is common among IT managers. In today's data centers, traditional cooling approaches involve complex air distribution systems that tend to be unpredictable and leave many customers guessing where the cold air goes. With the EcoAisle containment solution, Schneider Electric has taken the guess work out of data center cooling. Deploying a containment solution minimizes air mixing, increases efficiency and provides a predictable cooling architecture.

Applications

- Hot Air Containment
- Cold Air Containment

http://www.apc.com/wp?wp=135
EcoAisle Architecture
Intelligent air containment solutions that protect critical IT equipment and personnel

An EcoAisle solution places a barrier between the hot and cold airstreams within an IT Environment.

The EcoAisle provides a direct air path between the cold air supply and the IT inlet or a direct air path between the hot IT exhaust and the cooling unit inlet.

Flexible, Reliable, Standardized Solutions
• Modular design allows cluster / module / pod / zone expansion as IT needs change and grow
• Greenfield / Brownfield Environments
• Raised / Slab Floor
• Non conventional IT spaces / Office Space
• World Wide Availability

Active Flow Control

Increased Availability by Actively Responding to thermal changes
- Provides visibility into the cooling system operation, health and capacity
- Right sizes cooling airflow to the IT equipment airflow

1. IT airflow changes as load is increased / decreased

2. Active Flow Controller senses airflow change in contained aisle

3. Active Flow Controller sends signal to cooling units to adjust airflow to balance with the IT requirement

4. Active Flow Controller combined with rack inlet temperature sensor ensures IT equipment is efficiently kept at the proper temperature 24/7
Visibility to cooling system operation
- LED light ring provides a visual indicator for the contained zone
  - Red = Insufficient Cooling Airflow
  - Green = Optimal Cooling Airflow
  - Blue = Excess Cooling Airflow

Mounting Flexibility
- Sliding Door header
- Duct
- Ceiling panel
- 1U rack mount

Door Status Compatible
- Connected to a door switch to prevent cooling unit control changes due to the door opening to gain access to the contained environment.

Power and Communication
- Power
  - InRow unit will provide power through the A-Link bus
  - Wall wart – AP9505I (non InRow application)
- Communication
  - A-Link bus connection to InRow cooling units
  - Modbus to Room cooling units
Flexibility

Flexible to support changing business requirements as IT environments / solutions are not created equal

Ceiling Panel Containment
- Hot Aisle Containment
  - Row Cooling
- Cold Aisle Containment
  - Row Cooling
  - Room Cooling

Duct Containment
- Hot Aisle Containment
  - Room Cooling
- Cold Aisle Containment
  - Room Cooling
Variable Aisle Width
900 – 1800mm (36 – 72in)

Variable Rack Height
42U – 48U

Variable Rack Depth
900 – 1200mm (36 – 48in)

Variable Duct Height
500 – 1500mm (20 – 60in)

Variable Rack Width / Row Length

Height / Depth Adapters

Adjustable Height Supports

Blanking Panels
Fire Safe System

Protecting critical IT equipment and personnel in case of a thermal event

Containment systems are required to achieve the maximum efficiency of the IT cooling equipment. The barrier between the hot and cold airstreams is also a barrier between the fire suppression and the thermal event. This fire safe system will eliminate the barrier allowing the suppression system to safely and effectively extinguish the thermal event.

Temperature Activation
- UL723S Listed for use below a sprinkler suppression system.
- Rated to operate at temperatures above 37°C (100°F)

Smoke Activation
- Conforms to NFPA

Audible / Visible Alarm
- Alerts personnel to a thermal event allowing them to exit the aisle safely

Fire safe control
- Integrated controls hold panels in normal position allowing personnel to exit the aisle safely before panel release.

Durable design
- Panels and lock system resettable in the case of a drop away event.
- No parts to replace
EcoLEDgy Driven Lighting

Integrated High Efficiency LED lighting with on/off motion sensors

Many IT environments layouts are planned around the floor tiles, but planning also needs to happen for the illumination of the aisles between the rows of racks. The deployment of the solution may change causing the lighting at the room level to be positioned away from the aisle.

The EcoAisle system provides an integrated lighting solution that will provide illumination to the aisle.

**High Efficiency LED Lights**
- Long lasting energy efficient LED Lighting
- Available spacing
  - End to End
  - 300mm (12 in)
  - 600mm (24 in)

**Motion controlled**
- Lighting system is equipped with motion sensors providing an efficient means illumination control

**Manual override**
- A manual switch to allow the user to turn off the lights when exiting the aisle, providing an extra level of control and energy conservation.
Safe Slide Doors

Break away sliding door enables quick exit in the event of an emergency

Containment solutions require the ends of the aisle to be contained and accessible.

**Sliding Doors**
- Provide access to the aisle with a limited amount of floor space consumed.

**Door Lock**
- Provide additional security to the IT equipment by limiting access to the contained aisle

**Auto Close**
- Automatically slides the doors closed from the open position

**Hold Open**
- Allows the user to keep the doors in an open position when entering or leaving the aisle.

**Emergency Breakaway**
- Allows the user(s) to safely exit the aisle with a push button release
- Resettable no parts to replace

**Door Status Indicator**
- Integrated to allow the Active Flow Controller to know the status of the door

by Schneider Electric
Over Aisle / Rack Access

Removal of individual panels to allow access above the rack or aisle

Containment solutions limit access to the top of the racks or aisle for cabling and or maintenance.

Ceiling Panel
• Allows for easy installation and removal without the use of tools.
• Allows for over aisle or top of rack access.

Air Block Panel
• Allows for easy installation and removal without the use of tools.
• Allows for top of rack access.
