Important Safety Instructions — SAVE THESE INSTRUCTIONS

Read these instructions carefully and look at the equipment to become familiar with it before trying to install, operate, service or maintain it. The following safety messages may appear throughout this manual or on the equipment to warn of potential hazards or to call attention to information that clarifies or simplifies a procedure.

The addition of this symbol to a “Danger” or “Warning” safety message indicates that an electrical hazard exists which will result in personal injury if the instructions are not followed.

This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages with this symbol to avoid possible injury or death.

**DANGER**

DANGER indicates a hazardous situation which, if not avoided, will result in death or serious injury.

Failure to follow these instructions will result in death or serious injury.

**WARNING**

WARNING indicates a hazardous situation which, if not avoided, could result in death or serious injury.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

**CAUTION**

CAUTION indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

Failure to follow these instructions can result in injury or equipment damage.

**NOTICE**

NOTICE is used to address practices not related to physical injury. The safety alert symbol shall not be used with this type of safety message.

Failure to follow these instructions can result in equipment damage.

Please Note

Electrical equipment should only be installed, operated, serviced, and maintained by qualified personnel. No responsibility is assumed by Schneider Electric for any consequences arising out of the use of this material.

A qualified person is one who has skills and knowledge related to the construction, installation, and operation of electrical equipment and has received safety training to recognize and avoid the hazards involved.
FCC Statement

NOTE: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

Safety Precautions

⚠️ DANGER
HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH
All safety instructions in this document must be read, understood and followed.
Failure to follow these instructions will result in death or serious injury.

⚠️ DANGER
HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH
Read all instructions in this manual before installing or working on this product.
Failure to follow these instructions will result in death or serious injury.

⚠️ DANGER
HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH
Do not install the product until all construction work has been completed and the installation room has been cleaned.
Failure to follow these instructions will result in death or serious injury.

⚠️ DANGER
HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH
- The product must be installed according to the specifications and requirements as defined by Schneider Electric. It concerns in particular the external and internal protections (upstream breakers, battery breakers, cabling, etc.) and environmental requirements. No responsibility is assumed by Schneider Electric if these requirements are not respected.
- After the product has been electrically wired, do not start up the system. Start-up must only be performed by Schneider Electric.
Failure to follow these instructions will result in death or serious injury.
DANGER
HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH
The product must be installed according to local and national regulations. Install the product according to:
• NEC NFPA 70, or
• Canadian Electrical Code (C22.1, Part 1)
depending on which one of the standards apply in your local area.
Failure to follow these instructions will result in death or serious injury.

DANGER
HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH
• Install the product in a temperature controlled indoor environment free of conductive contaminants and humidity.
• Install the product on a non-flammable, level and solid surface (e.g. concrete) that can support the weight of the system.
Failure to follow these instructions will result in death or serious injury.

DANGER
HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH
The product is not designed for and must therefore not be installed in the following unusual operating environments:
• Damaging fumes
• Explosive mixtures of dust or gases, corrosive gases, or conductive or radiant heat from other sources
• Moisture, abrasive dust, steam or in an excessively damp environment
• Fungus, insects, vermin
• Salt-laden air or contaminated cooling refrigerant
• Pollution degree higher than 2 according to IEC 60664-1
• Exposure to abnormal vibrations, shocks, and tilting
• Exposure to direct sunlight, heat sources, or strong electromagnetic fields
Failure to follow these instructions will result in death or serious injury.

DANGER
HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH
Do not drill or cut holes for cables or conduits with the gland plates installed and do not drill or cut holes in close proximity to the product.
Failure to follow these instructions will result in death or serious injury.

WARNING
HAZARD OF ARC FLASH
Do not make mechanical changes to the product (including removal of cabinet parts or drilling/cutting of holes) that are not described in this manual.
Failure to follow these instructions can result in death, serious injury, or equipment damage.
**NOTICE**

**RISK OF OVERHEATING**

Respect the space requirements around the product and do not cover the ventilation openings when the product is in operation.

Failure to follow these instructions can result in equipment damage.

---

**Electrical Safety**

**DANGER**

**HAZARD OF ELECTRIC SHOCK, EXPLOSION OR ARC FLASH**

- Electrical equipment must be installed, operated, serviced, and maintained only by qualified personnel.
- Apply appropriate personal protective equipment (PPE) and follow safe electrical work practices.
- Turn off all power supplying the PDU system before working on or inside the equipment.
- Before working on the PDU system, check for hazardous voltage between all terminals including the protective earth.
- A disconnection device (e.g. disconnection circuit breaker or switch) must be installed to enable isolation of the system from upstream power sources in accordance with local regulations. This disconnection device must be easily accessible and visible.
- The PDU must be properly earthed/grounded and due to a high leakage current, the earthing/grounding conductor must be connected first.

Failure to follow these instructions will result in death or serious injury.
Receiving

External Inspection

When the shipment arrives, inspect the shipping material for any signs of damage or mishandling. Check tilt and impact indicators. Do not attempt to install the system if a damage is apparent. If any damage is noted, contact Schneider Electric and file a damage claim with the shipping agency within 24 hours.

Compare the components of the shipment with the bill of lading. Report any missing items to the carrier and to Schneider Electric immediately.

Verify that labelled units match the order confirmation.

Storage

If the equipment is to be stored prior to installation, it should be stored in a cool, dry, well-ventilated location that is protected against rain, splashing water, chemical agents, etc. The equipment should be covered with a tarpaulin or plastic wrapper to protect it against dust, dirt, paint, or other foreign materials.
Installation

Recommended Upstream Protection

For PDU systems with a main input switch (MIS), an input breaker must be installed upstream of the PDU.

## Recommended Cables Sizes

**DANGER**

HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

All wiring must comply with all applicable national and/or electrical codes.
- All field wiring connections to be made with UL listed wire connectors suitable for the size and type of wire involved.
- Conduit openings to be installed only in designated terminal compartment area.
- Equipment must be field grounded using equipment grounding conductors (EGC) sized in accordance with NEC based on the main input device (MID) maximum rating.

Failure to follow these instructions will result in death or serious injury.

PDU with Main Input Breaker MIB

PDU with Main Input Breaker MIB and Main Output Breaker MOB
PDU with Main Input Switch MIS

PDU with Main Input Switch MIS and Main Output Breaker MOB
Installation Procedure

Bottom Cable Entry System

1. Move the PDU to the final installation location with a forklift or hand pallet truck. Lift the PDU front to back or back to front through the openings in the lower part of the PDU.

2. Install the Seismic Anchoring (Option), page 18.

3. Follow one of the procedures:
   – Prepare the PDU for Cables in Bottom Entry System, page 20, or

5. Connect the Load to the Branch Breakers, page 23.

Top Cable Entry System
Install the Seismic Anchoring (Option)

Use the optional seismic kit for this procedure.

Overview of Anchoring Holes

1. Drill holes for anchoring in the floor according to overview.
2. Mount the three rear anchors to the floor with M12 bolts (not provided).

**Rear View of the PDU**

3. Install the rear anchoring brackets on the PDU.

4. Push the PDU into position so the rear anchoring brackets connect to the rear anchors.

5. Install the front anchoring brackets on the PDU and mount to the floor with M10 expansion bolts (not supplied).

**Front View of the PDU**
Prepare the PDU for Cables in Bottom Entry System

**DANGER**

HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

Do not drill or punch holes for cables or conduits with the gland plate installed and do not drill or punch holes in close proximity to the PDU.

Failure to follow these instructions will result in death or serious injury.

1. Remove the right side panels from the PDU for better access, if possible.
2. Remove the indicated front plates from the PDU.
3. Remove the gland plate in the bottom left side of the PDU.

**Front View of the PDU**

4. Drill/punch holes for power cables/conduits in the gland plate. Conduits are not provided.
5. Reinstall the gland plate in the bottom left side of the PDU.
6. Lockout/Tagout the main input breaker MIB/main input switch MIS in the OFF (open) position.
Prepare the PDU for Cables in Top Entry System

⚠️ DANGER

HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

Do not drill or punch holes for cables or conduits with the gland plate installed and do not drill or punch holes in close proximity to the PDU.

Failure to follow these instructions will result in death or serious injury.

1. Remove the right side panels from the PDU for better access, if possible.
2. Remove the indicated front plates.
3. Remove the gland plates from the top of the PDU.

Front View of the PDU

4. Drill/punch holes for power cables/conduits in the gland plates. Conduits are not provided.
5. Reinstall the gland plates in the top of the PDU.
6. Lockout/Tagout the main input breaker MIB/main input switch MIS in the OFF (open) position.
Connect the Input Power Cables

1. Route the equipment grounding conductor/PE cables through the top or bottom left side of the PDU and connect to the PE busbar.

2. Route the input cables through the top or bottom left side of the PDU and connect to the main input breaker MIB/main input switch MIS.

Front View of the PDU
Connect the Load to the Branch Breakers

1. Route the power cables from the load through the top or bottom right side of the PDU. Bottom cable entry is shown in illustration.

2. For each power cable set:
   a. Connect the N cable to the N busbar.
   b. Connect the equipment grounding conductor/PE cable to the PE busbar.
   c. Route the power cables through the provided current transformers for the branch breaker. Check that the direction of the power cables matches the labels on the current transformers. The signal cables for the current transformers are preinstalled by the factory.
   d. Connect the power cables to the branch breaker.

Front View of the PDU
Connect the Modbus/Ethernet Cables

1. Connect an Ethernet cable with RJ45 plug to the Ethernet port.
2. Connect the Modbus cable with RJ45 plug to the Modbus port on the PDU.
   - 2-wire or 4-wire shielded twisted pair cables must be used for Modbus connections. Use a cable for Modbus serial link (RJ45 to RJ45 or RJ45 to free wires depending on the Modbus controller characteristics).
   - The Modbus port is optically isolated. The Modbus port’s ground is not connected to any other ground.
   - Install 150 Ohm termination resistors at each end of each bus if the buses are very long and operate at high data rates. Busses under 610 meters (2000 feet) at 9600 baud or under 305 meters (1000 feet) at 19.200 baud should not require termination resistors.
   - Install 400–650 Ohm bias resistors at or inside the system controller; one from D0 to ground and one from D1 to +5 VDC.

Example: Modbus 4-Wire on RJ45 Connector

3. If needed, use the pass-through communication port on the roof of the PDU as an extension of either the Modbus or the Ethernet port. Use a standard UTP straight-through cable with RJ45 plugs, connect one end to the intended port on the PDU, and the other end to the port on the roof (from the inside). Then, connect the external Modbus with RJ45 plug or Ethernet cable with RJ45 plug to the extension port on top of the PDU.

4. If more than one PDU must be connected to the Modbus controller, use an RJ45 Modbus hub or splitter block.

   **NOTE:** Wiring should be done in accordance with local wiring codes. Route signal cables separately from power cables to reduce noise.
Final Installation

1. Reinstall all removed plates in the PDU.
2. Reinstall the side panels on the PDU.
3. Install the kick plates on all sides of the PDU.

Front View of the PDU
Operation

User Interface

Front View of the PDU

E. Status LEDs
F. Display reset button
G. Network connection LED:
   • Solid green: The system has valid TCP/IP settings. See Configure the Network, page 37.
   • Flashing green: The system does not have valid TCP/IP settings.
   • Solid orange: The display is inoperable. Contact Schneider Electric.
   • Flashing orange: The system is making BOOTP requests. See Configure the Network, page 37.
   • Alternately flashing green and orange: If the LED is alternately flashing slowly, the system is making DHCP requests. See Configure the Network, page 37. If the LED is alternately flashing rapidly, the system is starting up.
   • Off: The display is not receiving input power or the display is inoperable.
H. LED for indication of network connection type:
- Solid green: The system is connected to a network operating at 10 Megabits per second (Mbps).
- Flashing green: The system is receiving or transmitting data packets at 10 Megabits per second (Mbps).
- Solid orange: The system is connected to a network operating at 100 Megabits per second (Mbps).
- Flashing orange: The system is receiving or transmitting data packets at 100 Megabits per second (Mbps).
- Off: One or more of the following exists: The display is not receiving input power, the cable that connects the system to the network is disconnected, the device that connects the system to the network is turned off, or the display is inoperable. Check the connections and if the LED remains off, contact Schneider Electric.

I. Slots reserved for service.
J. USB port.

Overview of Status LEDs

Configuration

Configure the Input Parameters

1. From the home screen on the display select Configuration > Input.

2. Enable the Breaker Open Alarm, if needed.

<table>
<thead>
<tr>
<th>Breaker Open Alarm:</th>
<th>✔ Enable</th>
</tr>
</thead>
</table>

Voltage Thresholds

| Maximum: | ✔ Enable | 100% | 100% [480 V] - 120% [576 V] |
| High:    | ✔ Enable | 108% | 99% [475 V] - 119% [571 V] |
| Low:     | ✔ Enable | 81%  | 81% [389 V] - 100% [480 V] |
| Minimum: | ✔ Enable | 80%  | 80% [384 V] - 99% [475 V] |

3. Set the Voltage Thresholds for: Maximum, High, Low, and Minimum by tapping Enable and setting the percentage.

4. Tap the > symbol to go to the next page.

5. Set the Current Thresholds for: Maximum, High, Low, and Minimum by tapping Enable and setting the percentage.

<table>
<thead>
<tr>
<th>Current Thresholds</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maximum:</td>
</tr>
<tr>
<td>High:</td>
</tr>
<tr>
<td>Low:</td>
</tr>
<tr>
<td>Minimum:</td>
</tr>
</tbody>
</table>

6. Tap OK to save your settings.
Configure the Output Parameters

1. From the home screen on the display select **Configuration > Output**.

2. Enable the **Breaker Open Alarm**, if needed.

3. Set the **Voltage Thresholds** for: **Maximum**, **High**, **Low**, and **Minimum** by tapping **Enable** and setting the percentage.

4. Tap the > symbol to go to the next page.

5. Set the **Current Thresholds** for: **Maximum**, **High**, **Low**, and **Minimum** by tapping **Enable** and setting the percentage.

6. Set the **Apparent Power Thresholds** for: **Maximum** and **Minimum** by tapping **Enable** and setting the percentage.

7. Tap the > symbol to go to the next page.
8. Set the Misc Thresholds for: Over Active Power, PF Deviation, Phase Loss, and Frequency Deviation by tapping Enable and setting the percentage or choosing from the drop-down list.

![Configuration and Output screen]

9. Tap OK to save your settings.

**Configure a Branch Breaker**

1. From the home screen on the display select Configuration > Branch > Add Breaker.
2. Configure the branch breaker parameters:
   
a. Set the **Position** to: **TOP/BOTTOM** and type the position number.

   ![Breaker Details](image)

   - **Position:** V TOP A 6 [1-7]
   - **No. of Poles:** 3 pole
   - **Phase:** L1 L2 L3
   - **Associated Channels:** 29 30 31
   - **Breaker Rating:** 1 A [1-600]
   - **CT Size:** 0 A [0-2000]
   - **I2C Position:** 9 [1-14]

   The positions are assigned taking the center as a reference:

   **Branch Breaker Positions**

   - TOP 7
   - TOP X
   - TOP 2
   - TOP 1

</table>

**Edit or Delete a Branch Breaker**

1. From the home screen on the display select **Configuration > Branch > Edit Breaker**.

2. Select the **Position** for the branch breaker and select **Modify Breaker** to edit the branch breaker parameters or **Delete Breaker** to delete the branch breaker from the configuration.

   **NOTE:** If an alarm exists for a given branch breaker, you must reboot the display after deleting a breaker to clear the alarm(s).

<table>

<td>Metric</td>
</tr>
<tr>
<td><strong>Manual:</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Current Date:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Current Time:</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Synchronize with NTP Server</strong></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

2. Select the preferred language using the up and down arrows.
3. Select the preferred date format using the up and down arrows.
4. Select the preferred temperature units: **US Customary** (*Fahrenheit) or **Metric** (*Celsius).
5. Set the current date and time using one of the below two methods:
   - Set the date and time manually on the display by selecting **Manual** and typing the actual date and time and completing with **Enter**.
   - Set the date and time automatically by selecting **Synchronize with NTP server** (Network Time Protocol server).

**NOTE:** NTP server settings can be configured in the network management interface via the Web, command line, or config file.

6. Tap **OK** to save your settings.
Configure the Display Settings

1. From the home screen on the display select Configuration > Display > System Settings.

<table>
<thead>
<tr>
<th>Configuration</th>
<th>Display</th>
<th>System Settings</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alarm Volume</td>
<td>V</td>
<td>Low</td>
</tr>
<tr>
<td>Button Volume</td>
<td>V</td>
<td>Medium</td>
</tr>
<tr>

<td>10 minutes</td>
</tr>
<tr>
<td></td>
<td>V</td>
<td>Off intensity</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>ESC</td>
<td>OK</td>
</tr>
</tbody>
</table>

2. Set the **Alarm Volume**. Choose between: Off, Low, Medium, and High.

3. Set the **Button Volume**. Choose between: Off, Low, Medium, and High.

4. Set the **Brightness** of the display. Choose between: Low, Medium, and High.

5. Enable or disable **Backlight Timeout**. If you wish to enable backlight timeout, set the time limit in minutes for enabling backlight timeout. Choose between: 60, 30, 10, 5, and 1.

6. Set the intensity of the backlight. Choose between: Off, Very Low, Low, and Medium.

7. Set the time limit in minutes for automatic log off. Choose between: 60, 30, 10, 5, and 1.

8. Tap **OK** to save your settings.

Add a New User or Edit an Existing User

1. From the home screen on the display select Configuration > Display > Security.
2. Select **Add User** to add a new user or select **Edit User** to edit an existing user of the system.

<table>
<thead>
<tr>
<th>Configuration</th>
<th>Display</th>
<th>Security</th>
<th>Add User</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name:</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Pin:</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Confirm Pin:</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

3. In the **Name** field, type in the name of the user. Complete with **Enter**.

4. In the **Pin** field, type in a pin code for the user. Complete with **Enter**.

5. In the **Confirm Pin** field, retype the pin code of the user. Complete with **Enter**.

6. Tap **OK** to save your settings.

**Delete a User**

1. From the home screen on the display select **Configuration > Display > Security > Delete User**.

2. Browse to the user that you wish to delete using the up and down arrows and tap **OK**.

3. Tap **Yes** to confirm deletion of an existing user of the system.

**Configure the Network**

1. From the home screen on the display select **Configuration > Network** and select either **TCP/IPv4**, **TCP/IPv6**, **Web Access**, or **FTP Server**.
2. Configure the following settings:

a. **TCP/IPv4**: Enable IPv4 (if applicable), and select the **Address Mode** (Manual, DHCP, or BOOTP).

   ![Configuration Network TCP/IPv4](image)
   - Enable IPv4
   - Address Mode: DHCP, 10.179.228.77
   - Require vendor specific cookies to accept DHCP
   - Manual Settings:
     - System IP: 0.0.0.0
     - Subnet Mask: 0.0.0.0
     - Default Gateway: 0.0.0.0

b. **TCP/IPv6**: Enable IPv6 (if applicable), select Auto Configuration or Manual Configuration, and select the **DHCPv6 Mode** (Router controlled, Non-Address Information Only, Never, or Address and Other Information).

   ![Configuration Network TCP/IPv6](image)
   - Enable IPv6
   - Auto Configuration
   - Manual Configuration
     - System IP: ::/64
     - Default Gateway: ::
   - DHCPv6 Mode: Router Controlled

NOTE: Tap Addresses to see all valid IPv6 addresses.

---

c. **Web Access**: Enable Web (if applicable) and select the **Access Mode** (HTTP or HTTPS).

   ![Configuration Network Web Access](image)
   - Enable Web
   - Access Mode: HTTP
   - Port: 80 [80, 5000 - 32768]
   - Restore Port To Default
d. **FTP server: Enable FTP** (if applicable).

![FTP server configuration screen](image)

**Configure Modbus**

Modbus can be configured for the built-in network management card.

1. From the home screen on the display select **Configuration > Modbus**.

2. For **Serial**:
   a. Enable or disable **Access**.
   b. Set the **Address** to a number between 1 and 247.
      
      **NOTE**: Every device on the bus must have exactly the same settings except the **Address**, which must be unique for every device. No two devices on the bus can have the same address.
   c. Set the **Baud rate** to **9600** or **19200**.
   d. Set the **Mode** to:
      - 8, E, 1, or
      - 8, O, 1, or
      - 8, N, 1, or
      - 8, N, 2.

3. For **TCP**:
   a. Enable or disable **Access**.
   b. Set the **Port** to 502 or a value between 5000 and 32768.

![Modbus configuration screen](image)

4. Tap **OK** to confirm your settings.
**Restore Default Configuration**

1. From the home screen on the display select **Configuration > Restore Defaults**.

<table>
<thead>
<tr>
<th>Configuration</th>
<th>Restore Defaults</th>
</tr>
</thead>
<tbody>
<tr>
<td>Restart Network Interface</td>
<td></td>
</tr>
<tr>
<td>Reset All</td>
<td>Exclude TCP/IP</td>
</tr>
<tr>
<td></td>
<td>TCP/IP</td>
</tr>
<tr>
<td></td>
<td>Event Configuration</td>
</tr>
<tr>
<td></td>
<td>Display Settings</td>
</tr>
</tbody>
</table>

2. Select one of the below options:

   - **Restart Network Interface**: Select this option to restart network interface.
   - **Reset All**: Select this option to reset all settings to default. You can select to leave out the TCP/IP settings from the reset procedure.
   - **Reset Only**: Select this option if you only wish to reset parts of the settings to default values. You can select to reset the following settings: **TCP/IP, Event Configuration**, and **Display Settings**.

3. When you have made your selection, tap **OK** to reset the selected settings to default.
Operation Procedures

Access Password-Protected Screens

1. When prompted for the password, select your username.
2. Type in the pin code for your username.

**NOTE:** The default pin code is 1234.
View the System Status Information

1. From the home screen on the display select **Status** and select the area that you want to see the status for.

   **NOTE:** IF the PDU does not have an input meter installed, the input status screen will only show **Breaker State: Open/Closed**.

### Input

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current</td>
<td>The present input current from the AC utility power source per phase in amperes (A).</td>
</tr>
<tr>
<td>Energy Usage</td>
<td>The accumulated input energy (kWh)</td>
</tr>
<tr>
<td>Frequency</td>
<td>The present input frequency in hertz (Hz).</td>
</tr>
<tr>
<td>Breaker Status</td>
<td>The present breaker status, either <strong>Open</strong> or <strong>Closed</strong>.</td>
</tr>
<tr>
<td>Voltage (phase-to-phase)</td>
<td>The present phase-to-phase input voltage.</td>
</tr>
</tbody>
</table>

**NOTE:** The different meters support different output parameters; The PDU display may not show all of the output parameters listed.

### Output

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Voltage (phase-to-neutral)²</td>
<td>The phase-to-neutral output voltage in volts (V).</td>
</tr>
<tr>
<td>Current</td>
<td>The present output current for each phase in amperes (A).</td>
</tr>
<tr>
<td>Active Power</td>
<td>The present active power (or real power) output for each phase in kilowatts (kW). Active power is the portion of power flow that, averaged over a complete cycle of the AC waveform, results in net transfer of energy in one direction.</td>
</tr>
<tr>
<td>Reactive Power</td>
<td>The present reactive power for each phase in kVAR. Reactive power represents energy alternately stored and released by inductive and capacitive loads in the system.</td>
</tr>
<tr>
<td>Apparent Power</td>
<td>The present apparent power output for each phase in kVA. Apparent power is the product of RMS (root mean square) volts and RMS amperes.</td>
</tr>
<tr>
<td>Power Factor</td>
<td>The present output power factor for each phase. Power factor is the ratio of active power to apparent power.</td>
</tr>
<tr>
<td>Displacement PF</td>
<td>The present output displacement power factor for each phase. Displacement power factor is the ratio of active power to apparent power considering the fundamental frequency (60 Hz) only, and neglecting the harmonics.</td>
</tr>
<tr>
<td>Frequency</td>
<td>The present output frequency in hertz (Hz).</td>
</tr>
<tr>
<td>Breaker Status</td>
<td>The present breaker status, either <strong>Open</strong> or <strong>Closed</strong>.</td>
</tr>
<tr>
<td>Voltage (phase-to-phase)</td>
<td>The phase-to-phase output voltage in volts (V).</td>
</tr>
<tr>
<td>Active</td>
<td>Active energy - The total active energy consumption since the unit was energized, in Watts-hour (Wh).</td>
</tr>
<tr>
<td>Reactive</td>
<td>Reactive energy - The total reactive energy consumption since the unit was energized, in VArh.</td>
</tr>
<tr>
<td>Apparent</td>
<td>Apparent energy - The total apparent energy consumption since the unit was energized, in Volt-Ampere-hour (VAh)</td>
</tr>
<tr>
<td>Total Active Power</td>
<td>The present total active output power (for all three phases) in kilowatts (kW).</td>
</tr>
<tr>
<td>Total Apparent Power</td>
<td>The present apparent power output for each phase in thousands of Volt-Amps (kVA). Apparent power is the product of RMS (root mean square) volts and RMS amperes.</td>
</tr>
<tr>
<td>Total Reactive Power</td>
<td>The present total reactive power in kVAR.</td>
</tr>
<tr>
<td>Total Power Factor</td>
<td>The present total power factor.</td>
</tr>
<tr>
<td>Total Displacement PF</td>
<td>The present total displacement power factor.</td>
</tr>
<tr>
<td>Energy Reset Date</td>
<td>The date and time since the unit was first energized and the accumulated energy has been measured.</td>
</tr>
</tbody>
</table>

² Only applicable in systems with neutral connection.

Active Alarms

| Active Alarms | For more information on active alarms, go to View the Active Alarms, page 49. |

Start Up the PDU

Contact Schneider Electric to schedule the first start-up of the PDU. Only qualified personnel must handle or operate the equipment.

Follow these steps any time that the system is restarted after having been shut completely down with no power applied to the system.

1. Verify the following before starting the PDU:
   a. The upstream input breaker is in the OFF position.
   b. The power cables have been correctly connected to the main input breaker MIB/main input switch MIS.
   c. Voltage connected to the PDU matches the PDU nameplate and model number.
   d. All equipment has been properly grounded.
   e. All power cables and signal cables are installed correctly.
   f. All ventilation areas are free for obstructions that might impair proper airflow.

2. Close the upstream input breaker.

3. Close the main input breaker MIB/main input switch MIS.

4. Verify the function of any installed power meters.

5. Close the main output breaker MOB, if present.

6. Close the individual branch breakers as required.

Post-requisite:

Verify normal operation of the PDU immediately after the start-up has been performed.

Use the display and power meters (if present) to verify proper readings from all circuits.
Shut Down the PDU

**NOTE:** Shutting down the PDU will cut the power to all connected loads.

1. Shut down the loads, if possible.
2. Open the individual branch breakers as required.
3. Open the main output breaker MOB, if present.
4. Open the main input breaker MIB/main input switch MIS.
5. Open the upstream input breaker.
6. Measure for voltages on all busbars before working on the PDU.

Access a Configured Network Management Interface

The below procedure describes how to access the network management interface from a web interface. It is also possible to use the following interfaces:

- Telnet and SSH
- SNMP
- FTP
- SCP

**NOTE:** Ensure that only one network management interface in the entire system is set to synchronize time.

Modern web browsers are compatible with the network management interface. Use the most recent version of your browser to mitigate the risk of software security vulnerabilities.

You can use either of the following protocols when you use the web interface:

- The HTTP protocol, which provides authentication by user name and PIN but no encryption.
- The HTTPS protocol, which provides extra security through Secure Sockets Layer/Transport Layer Security (SSL/TLS); encrypts user names, PIN, and data being transmitted; and authenticates network management cards by means of digital certificates.

**NOTE:** HTTP is disabled and HTTPS is enabled by default.

1. Access the network management interface by its IP address (or its DNS name, if a DNS name is configured).
2. Enter the user name and password.
   
   **NOTE:** The default user name and password are apc at first login. You will be prompted to enter a new password after you log in.

3. To enable or disable the HTTP or HTTPS protocol, use the **Network** menu on the **Administration** tab, and select the **Access** option under the **Web** heading on the left navigation menu.
## Troubleshooting

The following is a list of the most common situations where the equipment does not perform as intended, the most likely cause, and a possible corrective action.

If the suggested corrective action does not return the equipment to normal operation, contact Schneider Electric for assistance.

<table>
<thead>
<tr>
<th>Situation</th>
<th>Possible cause</th>
<th>Corrective action</th>
</tr>
</thead>
<tbody>
<tr>
<td>The PDU has no input power.</td>
<td>No input source available.</td>
<td>Restore input source. Check the wiring continuity between the PDU input and the input source.</td>
</tr>
<tr>
<td>Specific output circuit(s) have no power.</td>
<td>Associated branch breaker(s) is OFF.</td>
<td>Turn the branch breaker(s) ON.</td>
</tr>
<tr>
<td></td>
<td>The wiring between the branch breaker(s) and the equipment is incorrect.</td>
<td>Check for wiring continuity and correct phase sequence between the branch breaker(s) and the equipment.</td>
</tr>
<tr>
<td></td>
<td>The equipment associated with the branch breaker is operating above the rated load.</td>
<td>Schedule a load check of the equipment with Schneider Electric; adjust for load balance if possible.</td>
</tr>
<tr>
<td>The branch breaker is inoperative.</td>
<td></td>
<td>Replace the inoperative branch breaker.</td>
</tr>
</tbody>
</table>
| No output from the PDU, but the display is active. | The main input breaker MIB is OFF. | 1. Record which alarm indications are active.  
2. Reset alarm(s) and clear external signal.  
3. Check the alarm history display for reasons why the main input breaker MIB tripped. Below is a list of possible causes:  
   • Manual trip, due to an emergency power off (EPO) button being pushed.  
   • An alarm shutdown has occurred. Determine the cause and take corrective action before resetting the main input breaker MIB.  
   • Automatic trip. An external signal was received from the building wiring via the alarm interface instructing the PDU to shunt-trip.  
   • Output overload. Schedule a load check of the PDU with Schneider Electric.  
   • Inoperative main input breaker MIB. Replace the main input breaker MIB.  
   • Short circuit internal to the PDU. Troubleshoot the PDU or contact Schneider Electric. |
| The main input switch MIS is OFF. | | Turn the main input switch MIS ON. |
| Output from the PDU is on, but the display is not active. | Control power fuse(s) blown. | Replace fuse(s). |
| Overvoltage/undervoltage. | Upstream UPS or power conditioner is inoperative. | Correct problem at the power source. |
| Voltage drop due to distance or excessive load on output. | | Reduce the distance or reduce the load. |
## Alarm Messages

<table>

<tbody>
<tr>
<td>&lt;LX&gt; Phase Loss Alarm</td>
<td>Line supply phase L1, L2, or L3 loss is detected.</td>
<td>Check the input source and the affected phase.</td>
</tr>
<tr>
<td>A Circuit Breaker within the Unit has Tripped</td>
<td>A circuit breaker within the unit has tripped.</td>
<td>Check the circuit breaker and identify the cause of the tripping. Clear the tripping event and close the circuit breaker.</td>
</tr>
<tr>
<td>Branch Breaker &lt;position X&gt; Apparent Power Below Minimum</td>
<td>Branch breaker in position X apparent power is below the minimum threshold.</td>
<td>Check the power for the affected branch breaker, evaluate the threshold setting, and adjust for your situation.</td>
</tr>
<tr>
<td>Branch Breaker &lt;position X&gt; Apparent Power Overload</td>
<td>Branch breaker in position X apparent power is above the maximum threshold.</td>
<td>Check the power for the affected branch breaker, evaluate the threshold setting, and adjust for your situation.</td>
</tr>
<tr>
<td>Branch Breaker &lt;position X&gt; High Current Alarm at Phase &lt;LX&gt;</td>
<td>Branch breaker in position X, phase L1, L2, or L3 current is above the high threshold.</td>
<td>Check the current for the affected branch breaker, evaluate the threshold setting, and adjust for your situation.</td>
</tr>
<tr>
<td>Branch Breaker &lt;position X&gt; Low Current Alarm at Phase &lt;LX&gt;</td>
<td>Branch breaker in position X, phase L1, L2, or L3 current is below the low threshold.</td>
<td>Check the current for the affected branch breaker, evaluate the threshold setting, and adjust for your situation.</td>
</tr>
<tr>
<td>Branch Breaker &lt;position X&gt; Maximum Current Alarm at Phase &lt;LX&gt;</td>
<td>Branch breaker in position X, phase L1, L2, or L3 current is above the maximum threshold.</td>
<td>Check the current for the affected branch breaker, evaluate the threshold setting, and adjust for your situation.</td>
</tr>
<tr>
<td>Branch Breaker &lt;position X&gt; Minimum Current Alarm at Phase &lt;LX&gt;</td>
<td>Branch breaker in position X, phase L1, L2, or L3 current is below the minimum threshold.</td>
<td>Check the current for the affected branch breaker, evaluate the threshold setting, and adjust for your situation.</td>
</tr>
<tr>
<td>Branch Circuit Breaker &lt;position X&gt; Open</td>
<td>The branch circuit breaker in position X is open.</td>
<td>Check the branch circuit breaker and adjust position or alarm settings depending on your situation.</td>
</tr>
<tr>
<td>EPO Activated</td>
<td>The EPO was activated.</td>
<td>Reset EPO. Check the remote EPO for the room or the fire control panel, or the EPO button located on the front panel of the PDU.</td>
</tr>
<tr>
<td>Input Breaker Open</td>
<td>The main input breaker is open.</td>
<td>Check the main input breaker and adjust position or alarm settings depending on your situation.</td>
</tr>
<tr>
<td>Input Current High Alarm at Phase &lt;LX&gt;</td>
<td>The input phase L1, L2, or L3 current is above the high threshold.</td>
<td>Check the input current for the affected phase, evaluate the threshold setting, and adjust for your situation.</td>
</tr>
<tr>
<td>Input Current Low Alarm at Phase &lt;LX&gt;</td>
<td>The input phase L1, L2, or L3 current is below the low threshold.</td>
<td>Check the input current for the affected phase, evaluate the threshold setting, and adjust for your situation.</td>
</tr>
<tr>
<td>Input Current Maximum Alarm at Phase &lt;LX&gt;</td>
<td>The input phase L1, L2, or L3 current is above the maximum threshold.</td>
<td>Check the input current for the affected phase, evaluate the threshold setting, and adjust for your situation.</td>
</tr>
<tr>
<td>Display alarm text</td>

<td>The output phase L1, L2, or L3 voltage is below the minimum threshold.</td>
<td>Check the output voltage for the affected phase, evaluate the threshold setting, and adjust for your situation.</td>
</tr>
<tr>
<td><strong>Transformer High Temperature Alarm</strong></td>
<td>Temperature at input transformer is higher than the normal range.</td>
<td>Check that the ventilation of the PDU is not blocked and review the information available from the metering display to determine if the PDU is overloaded.</td>
</tr>
<tr>
<td><strong>Transient Voltage Surge Suppressor Alarm</strong></td>
<td>Transient voltage surge suppressor system requires service.</td>
<td>Contact Schneider Electric to schedule a maintenance visit.</td>
</tr>
</tbody>
</table>

**NOTE:** Contact Schneider Electric if the PDU is operating correctly and the alarm persists, or if no root cause is found.
View the Log

1. From the home screen on the display select **Logs**.
2. You can browse through the list of the events using the arrows.

<table>
<thead>
<tr>
<th>Date/Time</th>
<th>Event</th>
</tr>
</thead>
<tbody>
<tr>
<td>XX/XX/XXXX</td>
<td></td>
</tr>
<tr>
<td>XX/XX:XX</td>
<td></td>
</tr>
<tr>
<td>XX/XX/XXXX</td>
<td></td>
</tr>
<tr>
<td>XX/XX:XX</td>
<td></td>
</tr>
<tr>
<td>XX/XX/XXXX</td>
<td></td>
</tr>
<tr>
<td>XX/XX:XX</td>
<td></td>
</tr>
<tr>
<td>XX/XX/XXXX</td>
<td></td>
</tr>
<tr>
<td>XX/XX:XX</td>
<td></td>
</tr>
</tbody>
</table>

3. You can now perform the following operations in the event log:
   
a. Tap the filter button to filter the events. Different filter settings are available.

   ![Filter Options](image)

   - Filter by Severity
     - Show Critical Events
     - Show Warning Events
     - Show Informational Events

   b. Tap the recycle bin button to clear the event log and select **Yes** to confirm.

4. Tap the home button to exit the log.

View the Active Alarms

When there is an active alarm in the system, a symbol indicating the alarm level is shown in the top right corner of the screen and the buzzer is active.

1. From the home screen on the display select **Status > Active Alarms**. Tapping the display will also silence the buzzer temporarily without login. By logging in and tapping the display, the buzzer will be silenced permanently.

2. You can now browse through the list of active alarms using the left and right arrows.

3. Tap the **Refresh** button to update the list with the latest active alarms.

**Alarm Levels**

There are three alarm levels:
- **Critical:** Take immediate action and call Schneider Electric.
- **Warning:** The load remains supported, but action must be taken. Call Schneider Electric.
- **Informational:** No immediate action required. Check the cause of the alarm as soon as possible.

**Reset EPO Alarm or Buzzer**

1. From the home screen on the display select *Reset Alarm*.
2. Tap *EPO Reset* to reset the EPO alarm, or tap *Audio Reset* to reset the buzzer.

**Calibrate the Display**

From the home screen on the display select *Tests > Display Calibration* and then select the calibration you want to perform.
- **Calibrate:** Tests and adjusts the touch screen target sensitivity.
- **Calibration Check:** Checks the calibration adjustments.
Maintenance

Determine if you need a Replacement Part

To determine if you need a replacement part, contact Schneider Electric and follow the procedure below so that the representative can assist you promptly:

1. In the event of an alarm condition, scroll through the alarm lists, record the information, and provide it to the representative.

2. Write down the serial number of the unit so that you will have it easily accessible when you contact Schneider Electric.

3. If possible, call Schneider Electric from a telephone that is within reach of the display so that you can gather and report additional information to the representative.

4. Be prepared to provide a detailed description of the problem. A representative will help you solve the problem over the telephone, if possible, or will assign a return material authorization (RMA) number to you. If a module is returned to Schneider Electric, this RMA number must be clearly printed on the outside of the package.

5. If the unit is within the warranty period and has been started up by Schneider Electric, repairs or replacements will be performed free of charge. If it is not within the warranty period, there will be a charge.

6. If the unit is covered by a Schneider Electric service contract, have the contract available to provide information to the representative.

Find the Serial Numbers

**NOTE:** If the display is not available, the serial number can also be found on a label in the cabinet.

1. From the home screen on the display tap **About**.

2. Tap on **PDU** and note down the serial number and have it ready for customer support.

3. Tap on the **About** in the top of the screen to go back.

4. Tap on **Display** and note down the serial number and have it ready for customer support.
