Sustainability Reporting & Strategy

The call for corporate transparency is getting louder

We are a growing global community which is increasingly urbanized, digitized and industrialized. Life as we currently know it is threatened by scarcity of resources and climate change, and it impacts all facets of society. As these challenges grow, you need to meet the requirements of shareholders, customers and employees to report on sustainability metrics.

This creates increasing complexity within organizations, making it more difficult to simplify communications, build strategic governance and ensure operational management is efficient and effective.

In order to mitigate risk, drive innovation and financial performance it is imperative to develop a strategy and deploy efficiency projects that deliver measurable results. Follow our Roadmap to address these challenges:

Where are you in the journey to increase your corporate transparency?

- **Sustainable Big Data** sets can be so large and complex that it becomes difficult to process using on-hand database management tools or traditional data processing applications.

  84%

  CEOs report sustainability is now discussed and acted upon at the board level.

- **Strategy** is critical to your journey. Reviews, analysis, planning and stakeholder engagement should yield an actionable sustainability roadmap.

  76%

  CEOs believe that embedding sustainability into core business will drive revenue growth and new opportunities.

Life Is On

Schneider Electric
Shareholders, customers, employees are demanding transparency. Companies must compile data from multiple systems, track trends and progress, and report in an accurate, open, and timely manner to satisfy their demands.

- **Voluntary Reporting** adds value by increasing transparency and corporate social responsibility. Examples include:
  - CTS
  - Energy Plan & Policy
  - Voluntary Carbon Compliance
  - ISO 50001 and/or ENERGY STAR.
  - CDP, GRI, and GRESB

- **Mandatory** reporting can be very complex. Experts can simplify the approach for:
  - CRC
  - EPA
  - EU-ETS
  - Non-financial reporting
  - Energy Efficiency Directive

90% CEOs believe measuring an organization’s total impact leads to better decisions and a stronger reputation with stakeholders, compared to using financial measures alone.

Schneider Electric Sustainability Experts can help you:

1. **Define a reporting strategy.** Our global team of experts understand sustainability and compliance at both the enterprise and local level.

2. **Collect and manage data.** Solutions tailored to client needs—from sustainability reporting support with Response Check services to Fully Managed Responses. Our award-winning technology streamlines data collection.

3. **Define and deploy solutions.** Improve results through resource efficiency projects, renewable technologies/energy procurement, and more, focusing on highest return on investment opportunities.
