

Lighting control in the residential sector

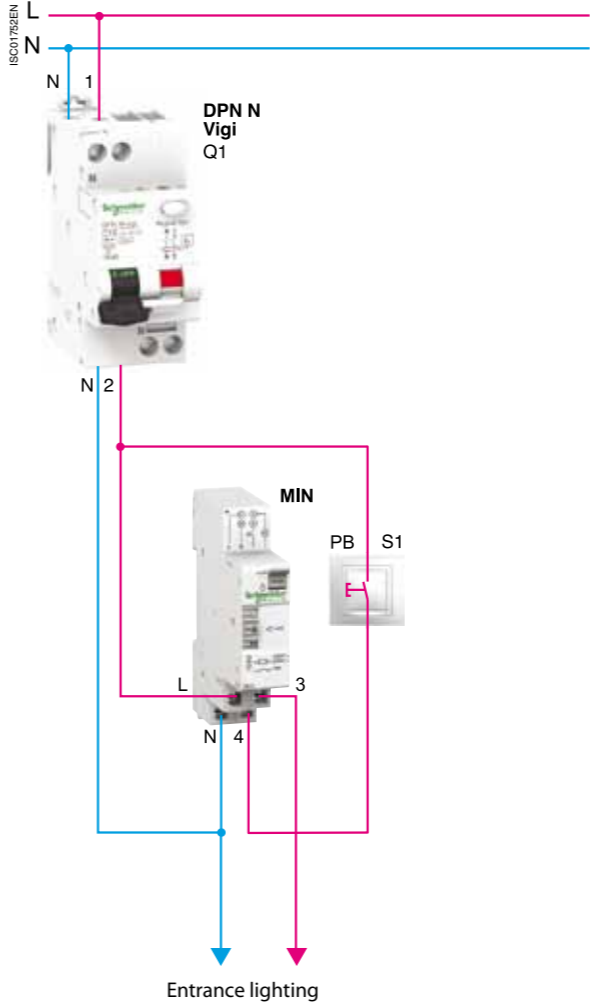

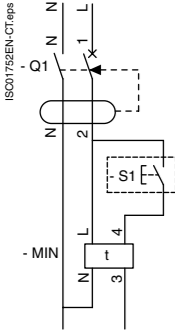

How to time the lighting in the entrance of an apartment building?

- A DPN N Vigi RCBO provides magnetic/thermal and earth leakage protection of the incandescent or 230 V halogen lighting circuit in the building entrance.
- When the S1 push-button is pressed, the MIN timer starts up the lighting and times it for a period that may be set from 1 to 7 minutes.
- Pressing the S1 again starts up the timer again.

Additional information

Set the lateral selector switch to position 4 in compliance with the recommendation for "4 conductors" type connection.
