

Manage lighting in home with wireless system

Simple and comfortable solution to control and dim your home light

Customer case

A couple is looking for a simple solution to manage lighting in their home.

They want to switch on and off the main light either locally or from their mobile phone. Also they want to dim individually their light, create and schedule different moments.

Benefits

- Easy to install and use.
- Comfort by adjusting the lights without ruining the moment and changing the ambiance with a single tap.
- Control lights at home when you are away.

Our recommendation

Thanks to the Wisier dimmer micromodule, you can turn on, off, or dim the lights from your smartphone. You can also remotely illuminate the house before you get home or switch the lights off when you're out to limit energy loss.

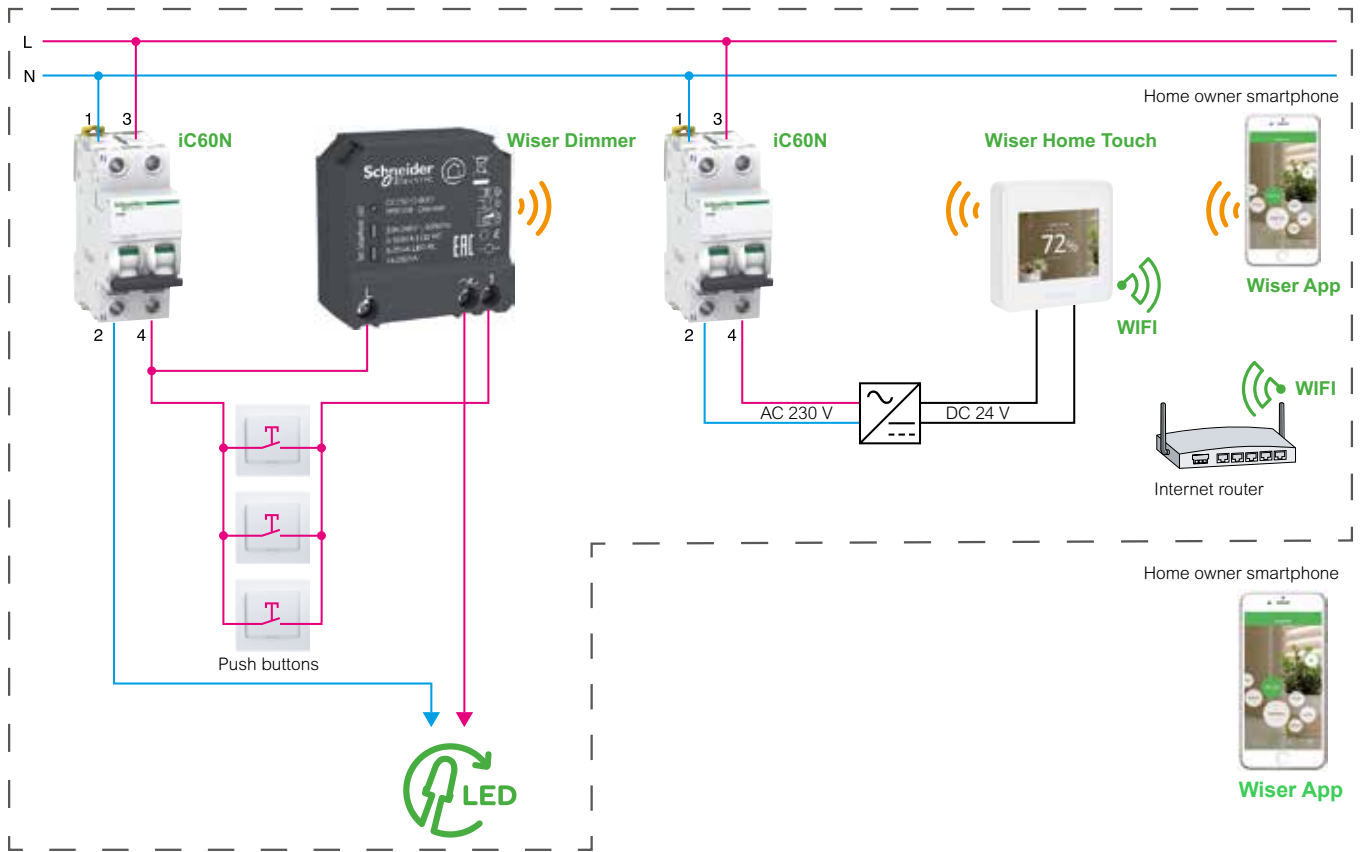

Also, the Wisier Home Touch is the hub for Wisier products, and a touch screen from which you can change modes, moments, and the temperature. Connect it to Wi-Fi for remote control of your home from anywhere, at any time, via the Wisier app. It keeps you in control of your home even when your phone is out of reach.
