Your designed home

Enjoy comfort

Convenient control of all building function

Live mobile

One interface on local and mobile devices

Be green at home

Identify savings and eliminate needless consumption

Feel good control at your fingertips

KNX Home Automation gives you the key to turn your house or apartment into a comfortable secure and efficient living space

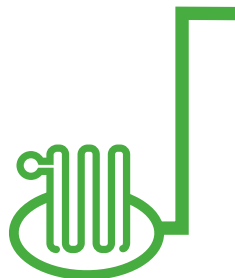

Light control

Switch or dim your lights from a central point or remotely and create your individual feel-good atmosphere. Dimming the lights also saves energy at once.

Heating control

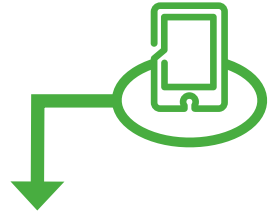

Simply control the temperature in all rooms. With a time-of-day schedule or an Eco-mode scene, you can reach substantial energy savings.

Blind control

Control your blinds individually by room, time of day or by central command.

Scheduler

Prepare your house in advance for absence or presence, according to the mood or a planned activity.

The temperatures can be set, heating can be lowered during the nights or when you are at work. Lights and blinds can be scheduled as well for simulating presence.

Mobile

Control and monitor all building functions even when you are away.

Energy consumption

Check your current water, gas and electricity consumption and review record data on a daily, monthly and yearly basis. This increases your awareness, leading to conscious energy and cost savings – and to a green lifestyle!

Safety

Feel safe when you are at home and confident when you are away. You can easily access the camera screen at any time to check if everything is alright.
