

Summer Thermal Management Solutions

Stop High Temperature damage before it starts.
Get protected with Schneider Electric's fully integrated solutions.

schneider-electric.com/enclosures

Life Is On

Schneider
Electric

Without proper thermal management protection, high summertime temperatures can wreak havoc on your enclosures and equipment. With Schneider Electric solutions — you're protected!

SUN RADIATION
EFFECT +

HIGH
TEMPERATURES IN
INSTALLATIONS =

OVERHEATING ON
ELECTRONICAL/
ELECTRICAL
DEVICES

The problem

When the temperatures rise considerably, both indoor and outdoor infrastructures suffer from the sun radiation. High risks of breakdowns from overtemperatures in sensitive electric and electronic equipment pose a major threat to continuous critical applications. PLCs, speed drives, control panels, contactors, switches, batteries, solid state relays and SAI are all particularly sensitive, as they have a threshold of maximum working temperature for efficiency and performance.

The consequence

As summer sets in, high temperatures will have a toll on the equipment and on maintenance teams handling it. It could lead to costly repairs and possible Interruptions. The prolonged exposition to heat on an electrical enclosure can drastically reduce the lifetime of its components and their operation.

Fan not working due to the presence of sugar in the plant (beer production)

Effects:

- Malfunctions and dysfunctions on continuous processes
- Lifetime reduction
- Overheating on surfaces temperatures posing safety threats (>70°C)
- Low energy efficiency due to the electronics that do not work on standard conditions

Consequences:

- Shutdowns and breakdowns of machines and operations
- Risk of loss of equipment reliability
- Estimated costs of installation shut-downs:
 - 50 000 € Metalworking (foundry)
 - 40 000 € Glassworks
 - 10 000 € Motor industry
 - 6 000 € Agri-business industry
 - 35 600 000 € Microprocessor industry
 - 2 940 000 € Banking transaction services
 - 90 000 € Airline ticket-booking services
 - 47 000 € Mobile telephone operators

The concentration of variable speed drives can push the inner temperature up to 70°C or higher (with no thermal solution installed).

Schneider Electric Solution

This is where ClimaSys Thermal Management Solutions come in. Schneider Electric's fully integrated ClimaSys DT diagnostic tools and products combine intelligent dataloggers and thermal design software to evaluate, propose, and balance your system to mitigate and control damage to your equipment – before it happens!

Step 1: diagnosis

First, **ClimaSys Dataloggers** collect, measure, and track the crucial data, then the **EffiClima Software** translates that data and accurately determines real environmental conditions, sun radiation, high temperatures and overheating inside and outside your enclosures.

Next, **ProClima Thermal Software** analyzes the data to determine the optimal thermal solution for each of your installations based on their environmental conditions, equipment type, temperature history, etc., and proposes the most effective thermal management solutions.

Don't let summer weather creep up on your equipment. Diagnosing and stabilizing the right temperature inside your enclosures is vital for maximizing the average service life of your installed equipment while keeping your costs down.

Introducing ClimaSys
DT: diagnostic tools

Step 2: Products

Once ClimaSys Diagnostic Tools has determined your project requirements for either new (Greenfield) or existing (Brownfield) installations, Schneider Electric will provide you with the optimal ClimaSys product range that meets your needs in order to monitor, control, and balance temperature and humidity within your enclosures.

Ventilation and airing

Airing and Forced Ventilation Systems

ClimaSys CV ventilation systems

In some ambients, due to the large amount of heat from electrical devices, it will be necessary to combine heating and ventilation systems. ClimaSys CV is recommended in those cases thanks to its exceptional flow rate efficiency, high protections rating, and ease of installation and maintenance.

Thermal architecture using innovative ultra-thin resistance heater

Cooling

Cooling units

ClimaSys CU cooling units

Choose cooling units for the harshest environments, where ambient temperatures can reach up to 55°C. Efficient air-conditioning keeps enclosures cool, regardless of the outside air temperature, while preventing internal hot spots and overheatings.

Controlling

Thermal control accessories

ClimaSys CC mechanical and electrical thermostats

Whether you prefer mechanical or electrical thermostats, ClimaSys CC Controllers are compact, easy to set up on any variety of rails and mounting plates, and feature easily accessible terminals. They also provide a high energy efficiency of the complete thermal system.
