Smart building automation can relieve a lot of headaches

As the healthcare industry grows and changes, facility managers face new challenges all the time. There is a trending emphasis on making healthcare facilities more accessible, which has led to the use of on-campus and off-campus patient care clinics. With an aged building management system – or none at all – these facilities often require a costly retrofit to optimize the environment of care. Large healthcare facilities have enjoyed the benefits of building automation for years. But, what about facilities with a smaller footprint? That kind of technology has been too expensive or too complex. Until now...

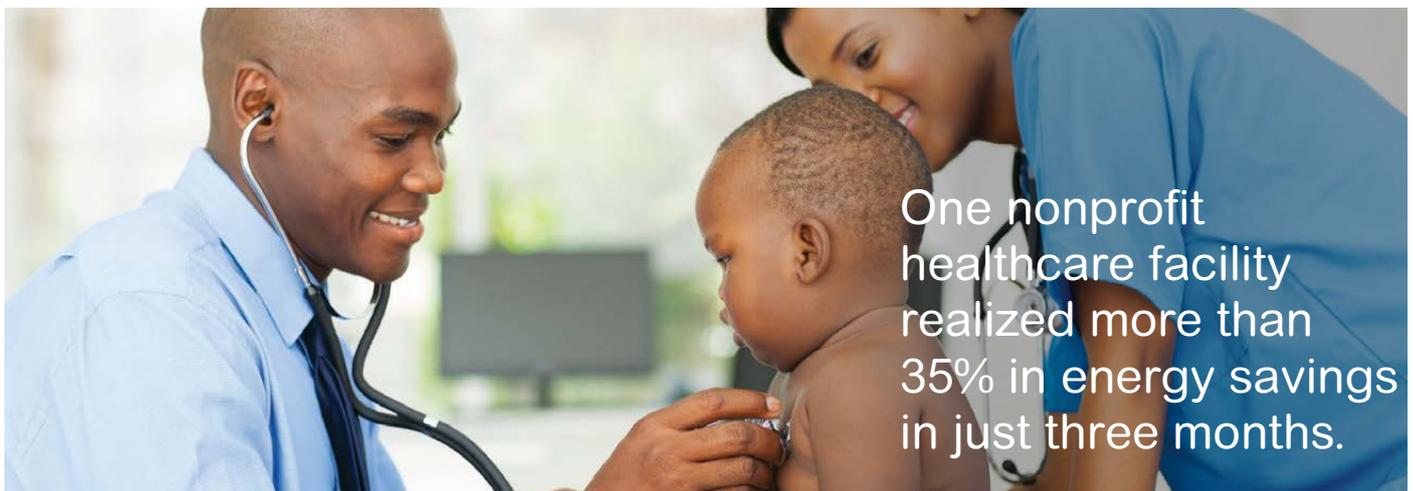

Schneider Electric™ has developed a solution tailor-made for managing small outpatient facilities. Instead of just a thermostat, you can equip each facility with smart building management capabilities that are easy and low-cost to install, and deliver rapid and measurable ROI. Enhancing patient comfort, while lowering energy costs, is a prescription for improved financial health. What's more, you can network facilities to centralize managing energy costs and eventually network to an enterprise-view of your building management system.

Drive more ROI!

- Healthcare employees are expensive. By optimizing working conditions you optimize patient care.
- Proper lighting helps to ensure accurate diagnostics, which is essential in reducing costly medical errors and readmissions.
- Door contacts and temperature sensors on laboratory refrigerators can prevent the loss of specimen samples – and help meet regulatory requirements.

Optimize efficiency and comfort

- Take control. Manage HVAC and lighting from anywhere, anytime.
- Set up schedules. Even manage multiple offices and clinics from one location.
- Cut energy waste and costs. Track energy spend, what's trending, and where to save.
- Reduce maintenance costs. Repair costs are high and disruption to patient services is unacceptable. Get alerts about equipment performance that will avoid emergencies.
- Enhance the patient experience. Maintain air quality, temperature and lighting for the best experience at the right price.
- Realize significant ROI. Return on investment is rapid and measurable.

One nonprofit healthcare facility realized more than 35% in energy savings in just three months.

Our solution enables you to focus more on what's important – your patients.

Financial health and patient satisfaction are two of healthcare's biggest concerns. Energy efficiency plays a pivotal role for healthcare facilities that are trying to reduce operating expenses. You can't manage what you can't see. Schneider Electric's solution for outpatient facilities such as clinics, ambulatory care centers, outpatient diagnostics, and medical-retail sites gives you the visibility and control you need to manage these smaller facilities. Leveraging wireless technology, our solution is cost-effective and can be installed during normal business hours without disrupting your patients or staff.

Designed to grow with you

- Get essential HVAC management through our application-specific room controllers.
- Enable central visibility of your HVAC system through wireless technology – our Building Expert Software (with no license fees!).
- Integrate lighting control to create the optimal environment, as well as occupancy sensors for proactive energy management.
- Expand control across your remote facilities with our cloud-based Building Insights solution.
- Seamlessly scale to integrate into larger building management systems.
- View reports and trends that help eliminate surprise repair and maintenance issues.

Did you consider?

- Patient satisfaction is more important than ever, with the new reimbursement policies in effect around the world, such as the Affordable Care Act in the U.S.
- Smart building automation can keep temperature, lighting, and air quality at optimal levels—and alert you when they're not!
- Typically smaller facilities do not have the benefit of onsite maintenance staff to properly manage repairs and utility issues.
- Healthcare is the second highest energy-intensive industry. As such, it has a significant opportunity to contribute to a greener world.*
