Life Is On

# Meet the future of intelligent building automation

As buildings continue to evolve and become more efficient, sustainable, and connected, customers' expectations are growing as well. They want greater flexibility and future-readiness, and they're looking for total control of their environment.

Fulfilling their needs can be challenging as most smart building systems are becoming more complex when it comes to commissioning and installation.

Simple yet innovative, Schneider Electric SpaceLogic KNX home and building automation solutions, help you meet unique customer demands and exceed expectations. It's easy to install, set up, operate, and maintain. And can help you grow your business.

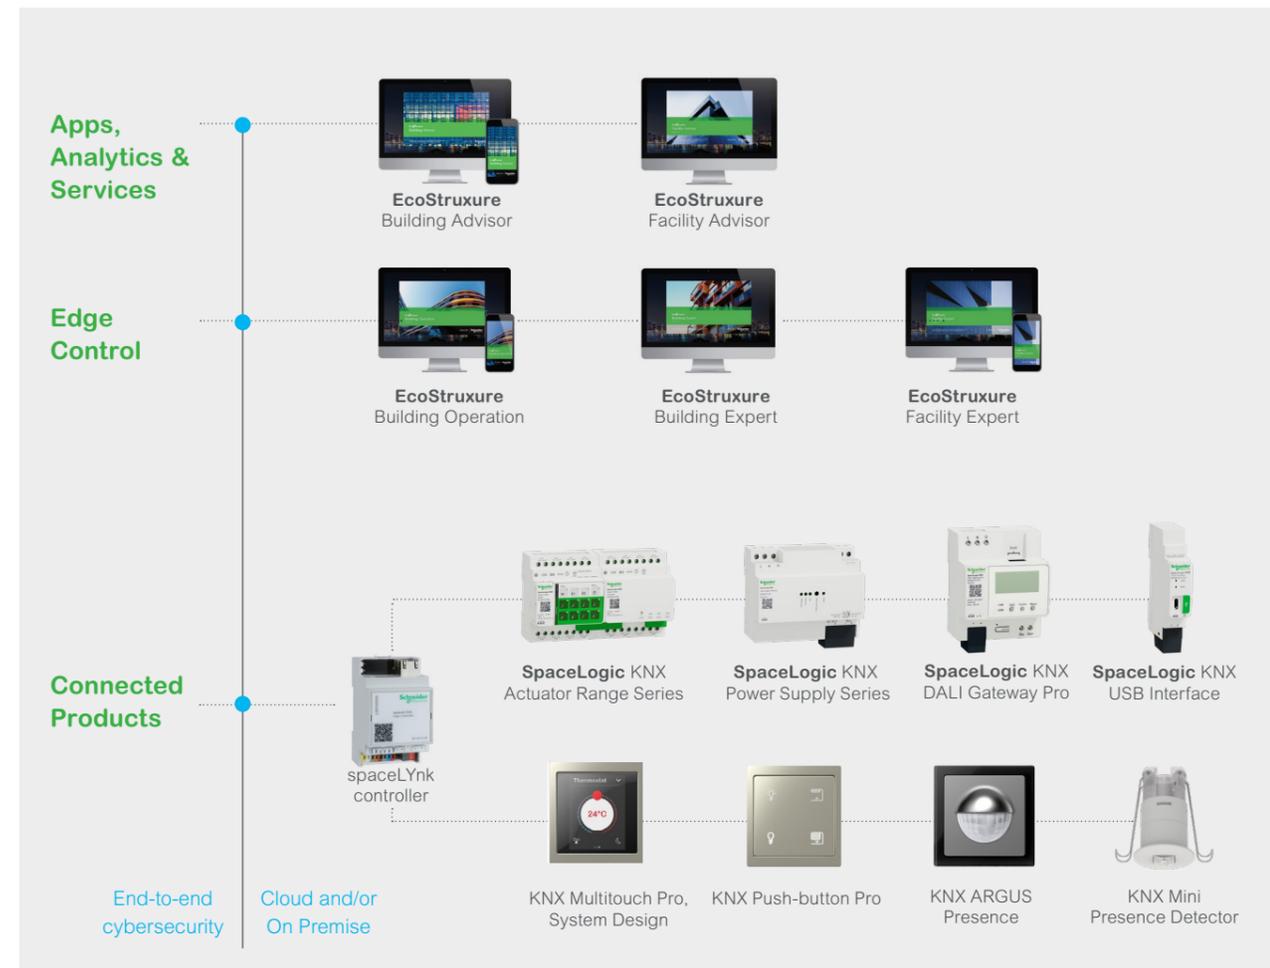

# Unleash your growth potential

SpaceLogic KNX is as flexible as it is smart:

- Perfect solution for different markets: retail, smart buildings, office spaces, hotels, and others.
- High functionality with a wide range of devices: KNX actuators, sensors, and smart home automation with Wiser™ for KNX.
- Compatible with Apple, Amazon, and Google voice assistant, ZigBee, and more.
- Advanced technology for increased safety, comfort, simplicity, and profitability.
- Easy to scale according to customers' growing needs.

## EcoStruxure™ for Building Innovation At Every Level

The simplicity of **SpaceLogic** KNX comes from its modularity and traceability. This means that it is easy to install or upgrade and maintain in the future, while rich functionalities allow to easily meet customers' ever-growing needs.

#### Easy to select, build, and commission

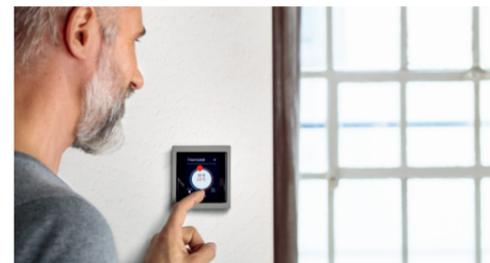

The SpaceLogic KNX system and its individual components are modular and can be replaced or added to the master extension hassle-free. With many partner-friendly tools, all the steps from product selection to system configuration are a breeze. Simple commissioning is possible with the eConfigure™ KNX online platform. The software gives you and your customers complete control over the design and commissioning process, meaning you can tailor everything to the building operator's needs. It provides:

- Faster quotation
- Simpler and quicker configuration and commissioning
- Importation of similar configurations across projects
- The ability to build flexibility into the system for future evolution

The system's greater functionality also means that you'll be needing fewer components to set up the system resulting in fewer reference numbers which simplify the ordering process.

#### Flexible with rich functionalities

The flexibility of SpaceLogic KNX is multifaceted. First, it presents end users with plenty of customization options that make the system feature-rich and efficient. Like the Multitouch Pro pushbuttons that can manage a number of fully customizable templates with one screen.

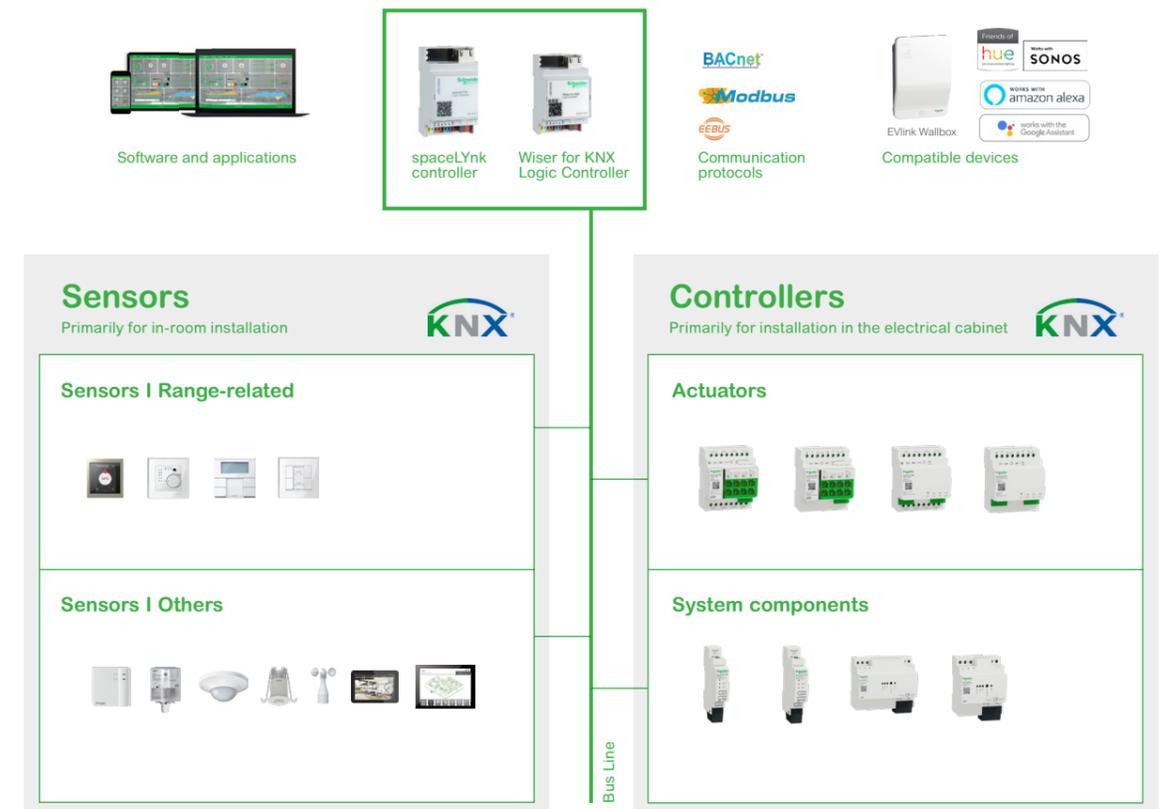

Secondly, it gives installers peace of mind with its master and extension concept which makes the whole system scalable for future equipment and expandable with broad compatibility, offering fully future-proof solutions that can grow along with your customers' needs.

Lastly, what sets SpaceLogic KNX apart from others is its possibility to connect a standard KNX system with other systems via a unique connectivity interface, which opens up numerous possibilities while keeping the essential promise of the robustness and reliability of the KNX standard.

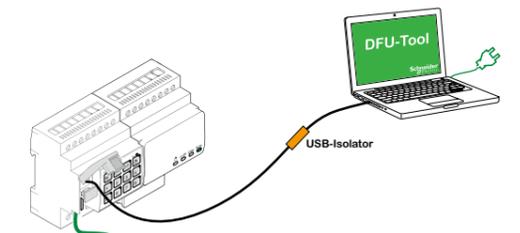

#### SpaceLogic KNX system architecture

#### Future-proof with effortless maintenance

The majority of SpaceLogic KNX devices can be upgraded when the new functionalities are added via firmware updates, extending significantly the longevity of the system. The process is simple and can be done with a laptop. The same tool used for updates also supports additional diagnosis function, making the maintenance job easier.

With QR codes on system components for easy tracing and SpaceLYnk logic control for regular software and firmware updates, SpaceLogic KNX is easy to maintain, giving you peace of mind and less time spent on sites for upkeep.

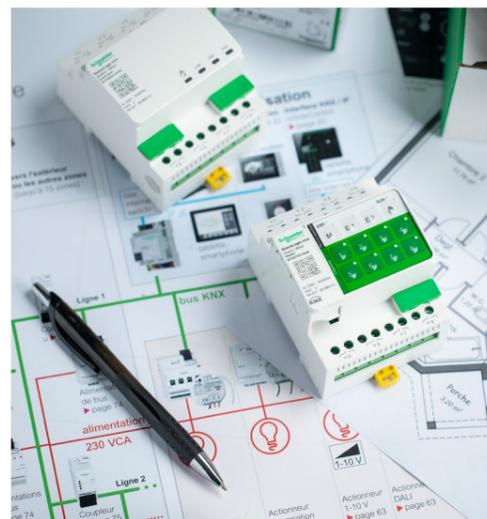

# Reliability

Schneider Electric has been developing KNX products for over 30 years, creating a solid foundation for the latest innovative technology. Giving both you and your customers a much-needed peace of mind.

## High quality

The KNX standard being open source means that it's vendor-agnostic and has been adopted by some 500 manufacturers that offer a vast range of KNX-certified products ranging from HVAC, alarms to household appliances, and smart meters. With every solution tested and validated by the KNX Association in an accredited lab, this makes KNX a proven technology that meets the highest standards of quality and reliability.

Additionally, most of the SpaceLogic KNX devices are designed and made in Europe ensuring the same high-quality standard you've learned to expect from Schneider Electric products. The quality and reliability have been confirmed by the **VDE Institute** with proper certification.

## Committed to cybersecurity

The Schneider Electric KNX range allows separate buildings to communicate securely via KNX IP secure systems and routers. It uses the highest authentication and encryption standards defined by KNX and compliant with Schneider Electric world-class cybersecurity guidelines.

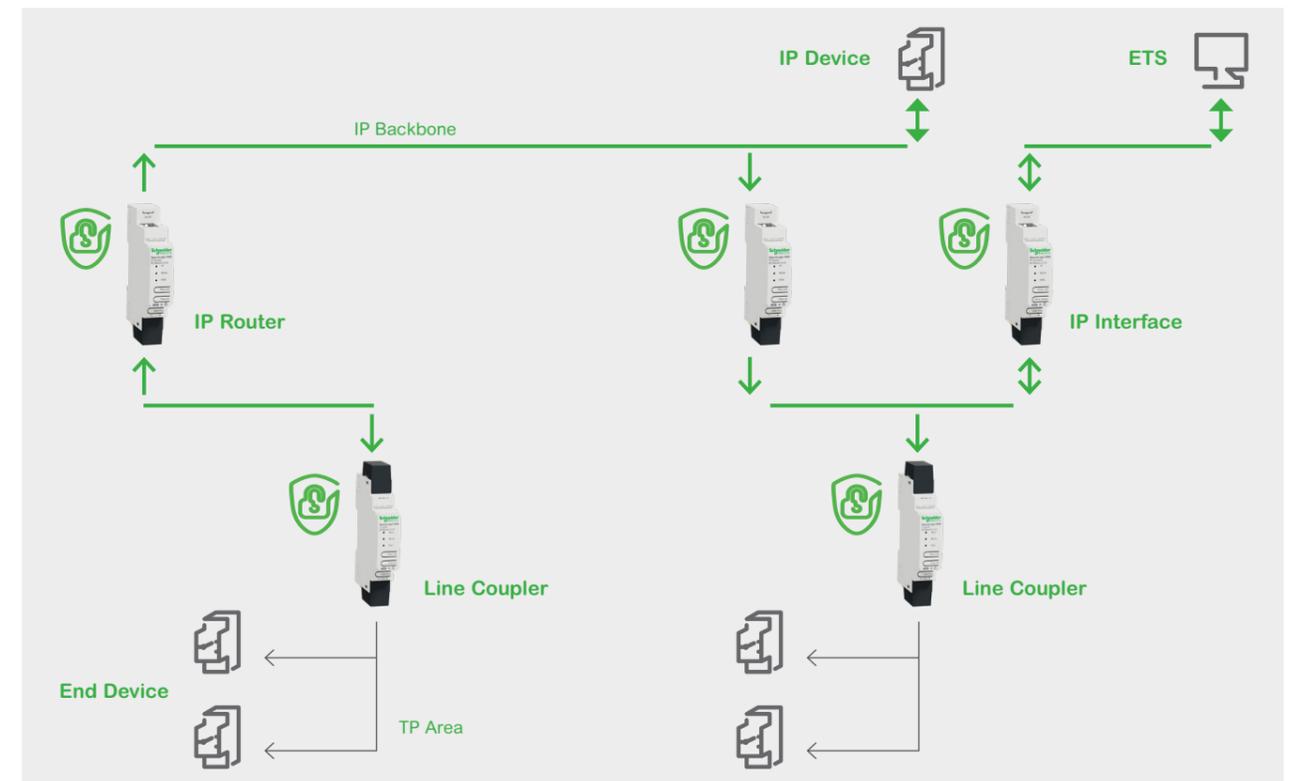

The SpaceLogic KNX IP Secure product range provides you with a versatile solution to transform each installation into a more secure home or building.

## Architecture of KNX Secure

SpaceLogic KNX architecture is secure where it needs to be. All the connections between key KNX devices are secured according to the latest KNX and Schneider Electric standards.

## Expertise that you can trust

Backed by Schneider's experience in the building automation market and extensive support system that includes customer care centers, dedicated KNX partners all over the world, and strong pre- and post-sales support you get all the help you need to better serve your customers.

No matter if you're a KNX expert, adopter, or novice, **SpaceLogic** KNX is a perfect way to grow your business. We provide a complete training program for all levels of proficiency and proper EcoXpert certification.

SpaceLogic KNX solutions open up new business possibilities for both residential and commercial markets. To make it easier for you we provide tools to help you make the most of this great opportunity.

Grow your expertise by signing up for our award-winning partner program EcoXpert. This program cements the partnership between Schneider Electric and a global, cross-expertise ecosystem of solution providers. Together, we deliver best-in-class automation and digital solutions for efficiency and sustainability to our customers.

For all EcoXpert partners, we provide access to Schneider Electric Exchange, our open business platform, where you can exchange insights, share best practices, find partners, solutions, and even list your offer to a global market.

With Schneider Electric, you can:

#### Grow your business

- Access unique solutions based on exclusively validated architectures
- Engage with experts to gain insights and best practices through our Exchange platform
- Get project leads generated by the EcoXpert program

#### Increase profitability

- Minimize engineering and commissioning time
- Decrease operational costs with simplified catalog
- Reduce response time thanks to flexible solutions

#### Attract and retain talent

- Boost employee expertise with dedicated training
- Be part of the community to co-shape the future roadmap
