Open, mobile, cloud security gives
your team innovative tools to respond
in seconds — from anywhere.

AccessXpert Enterprise Security Solution

schneider-electric.us/accessxpert

The next evolution in security technology empowers your personnel and delivers savings — anywhere, any time.

The Schneider Electric™ AccessXpert evolves your security operations, enabling personnel to operate with maximum efficiency in today's constantly changing, mobile environment. AccessXpert's simplified user interface, open protocol support, mobile device options, and Web- and cloud-based architectures deliver new capabilities without complex learning curves. Easy. Intuitive. Effective.

Experience beyond open systems

One of the industry's most innovative and open solutions, AccessXpert incorporates the flexibility of Mercury Hardware, the standard communications of BACnet™ and the global history of Schneider Electric open solutions. Utilizing a full RESTFUL API and WebServices, AccessXpert simplifies integrations and reduces development cost.

Increase flexibility and mobility

Mobile applications get your security operations team out of the command center and allow them to be visible and present throughout your business. From a smart device or laptop, your team can make clear, informed decisions to more effectively secure your enterprise.

Choose cloud-based or local

The hosted application and database reside in a secured cloud environment with replication across multiple servers for redundancy, or a nonhosted server and database option resides on your premise. The choice is yours.

Merge physical and cybersecurity

The secure structure in AccessXpert meets stringent security requirements and government regulations, so only authorized personnel access your security system. Encryption and authentication protect communications between controllers, workstations, and mobile devices.

Simplify integration

AccessXpert brings together disparate security systems such as access control, intrusion detection, mass messaging, and video surveillance into an easy-to-use interface. Furthermore, AccessXpert enables simplified integration with building management systems fostering new possibilities for enhanced security and efficiency.

Reduce operating costs

The integration, wireless, and cloud capabilities of AccessXpert combine for a highly efficient cost footprint, upfront and ongoing. The familiar, intuitive user interface reduces personnel training costs while off-the-shelf devices and universal protocols simplify support and maintenance. Integration to your BMS enables greater energy savings.
