

Extreme Networks

Schneider Electric Collaborative Automation Partner Program

- Innovation, performance, and reliability form the cornerstone of Extreme Networks product development philosophy, enabling our customers to make investment decisions predicated on long-term value from standards-based designs, wide-scale interoperability, and a foundation of network driven security. Our standards-based designs, open APIs and SDN architectures enable pre-packaged, turn-key and customized integrations with leading vendors in manufacturing IT environments.

Introducing Extreme Networks

Extreme Networks, Inc. (EXTR) delivers standards based networking solutions to help manufacturers improve performance, increase efficiency, and reduce costs across plant and back office operations.

Since 1996, Extreme Networks has delivered a wide range of networking solutions for automation & control applications including:

- Ethernet and Industrial Ethernet Switching
- Indoor and Outdoor 802.11 Wireless
- Network Management and Performance Monitoring
- Application Analytics
- Network Access Control and Identity Management
- CyberSecurity Solutions
- Integrations with leading UC, CyberSecurity, and Virtualization technology partners.

Total network services

ExtremeWorks Maintenance and Support provides access to expertise and support via our Global Technical Assistance Center (GTAC) and dedicated support site that enables quick and accurate resolution of network issues. Our award winning, 100% in-house technical assistance is available on a global basis 24x7x365.

The Internet of things

The growth of the Internet of Things (IoT) is affecting businesses of all types and blurring the boundary between OT and IT. As the number of IoT devices continues to grow exponentially, the requirements for network bandwidth and

security must accommodate the massive amount of data generated by the new devices and sensors. Extreme Networks’ software-driven networking solutions enable the automation and control necessary in meet the challenges of IoT. All of our solutions from wireless to wired are open, standards-based and managed by a single ExtremeControl console for ease of administration in an IoT environment.

Total solutions

Extreme Networks automation & control products and systems include:

ExtremeWireless, access points, centralized management and appliances that enable the highest density coverage in the most challenging environments, and deliver an exceptional experience for users, wherever they roam.

ExtremeSwitching, a comprehensive switch portfolio widely-recognized for high-performance and reliability. ExtremeSwitching runs a unified, modular OS for increased operational consistency and lowered risk from edge to core.

ExtremeControl, a suite of applications providing centralized visibility and granular control, automated device discovery, intelligent alarm and event management, historical data collection and trend analysis, as well as effective troubleshooting across network resources from a single interface.

ExtremeAnalytics provides visibility into application use across the network, empowering organizational efficiency, optimized application performance, and protection against malicious or unapproved system use.

Unique value proposition

Extreme Networks technology has been an integral part of the Foxboro Evo DCS Control Network for more than a decade. As an Extreme Network’s Alliance partner, Schneider Electric benefits from our highly collaborative approach, deep networking expertise, innovative solutions, and world-class support.

Authorized CAPP products

Authorized CAPP products	Product description	Distinguishing characteristics
Extreme wireless	ExtremeWireless is an industry-leading wireless solution consisting of access points, centralized management and appliances providing wired-like connections for Wi-Fi devices.	With ExtremeWireless, features such as Wireless Intrusion Detection and Prevention Service (WIDS/WIPS), Spectrum analysis, QoS and role-based access control are built into network and not bolted-on providing unmatched visibility, cyber security and control.
Extreme control	Extreme Control Center is a network management system of integrated management applications for centralized visibility and granular control – providing consistent management across all devices – from a single-pane-of-glass console.	Extreme Control increases efficiency and cuts down troubleshooting time and management of the network bringing simplicity to complex management configurations, reporting and fault isolation.
Extreme X460-G2	The X460-G2 Series are a family of powerful and scalable, intelligent and versatile switched ideally suited to aggregation or edge switches.	The X460-G2 Series provide sophisticated Layer 2 switching, as well as Layer 3 IPv4/IPv6 routing including policy-based switching and routing and low latency line-rate performance.
