

Deploy your building management system, faster.

Our BMS-in-a-rack solution helps you speed up deployment and add scalability.

With efficiency a priority in data center construction, it is crucial to quickly deploy your building systems while allowing for future growth. And since you must be efficient to adapt to changes in your needs and those of the industry, a modular system that can be deployed easier and faster can mean the difference between success and failure.

This is why Schneider Electric has created the SBO Control Rack solution — a scalable, BMS-in-a-rack system that is quick to setup and expand because of its standardized, modular architecture. Easily deploy this pre-made rack into your network room and start operations immediately to keep up with today's aggressive data center build and expansion schedules.

THE SCHNEIDER ELECTRIC SBO CONTROL RACK HELPS YOU SAVE TIME AND OPTIMIZE SPACE BY:

- Speeding up deployment with prefabricated architecture
- Coming custom engineered to meet your specifications
- Simplifying expansion and maintenance with drawer-based design
- Saving valuable wall space with its compact design

KEY FEATURES INCLUDE:

- Rack construction independent of the site conditions
- Installation that can be led by Schneider Electric™ specialists or your personnel
- Network hardware and I/O wiring that can be performed and tested in-factory
- BMS infrastructure merged with IT installation methodology
