

What's New?

EcoStruxure Geo SCADA Expert (ClearSCADA)

Open, flexible and scalable software solution for telemetry and remote SCADA applications

Introducing EcoStruxure™ Geo SCADA Expert 2019 Software:

- **Renamed from ClearSCADA™ to Geo SCADA Expert** – far-reaching product and documentation changes, minimizing disruption over system upgrades
- **HTML5 Web Client** – supporting latest web browsers, full function operations
- **MQTT Protocol** – Master/Extension driver for IoT protocol, first support will be for simple JSON messages

ClearSCADA 2017 R3 Software Previously Introduced:

- **SCADAPack™ 570/575 RTU Integration** – supporting the latest generation of SCADAPack Smart RTUs
- **WITS-DNP3 v3.0** – new features and more efficient communications
- **DMZ Server Management** – adding password and user management for secure architectures
- **Performance Alarms** – helping system administrators manage system load

ClearSCADA 2017 R2 Software Previously Introduced:

- **First Support for SCADAPack 570/575 Smart RTU** – an integration experience with the SCADAPack x70 RTU range
- **Independent Communications** – refined IP communications architecture to allow polling of multiple RTUs on the same channel at the same time
- **ISS WebX Server Separation** – Configure WebX server with connections to different ClearSCADA server instances, configure multiple WebX servers talking to the same ClearSCADA server instance, and more...

Key Benefits

- Reduce total cost of ownership
- Enhance operation & maintenance
- Help protect your investment as SCADA systems expand
- Enhance SCADA system reliability and security
- Manage data in challenging environments
- Increase operational efficiency

Unique Value Propositions

Full HTML5 Web Client

Any modern web browser can access the database using HTML5 technology

- Windows®, Android™, Apple®: desktop, tablet, large screen phone
- Microsoft® IE, Microsoft® Edge, Google® Chrome, Mozilla® Firefox, Apple® Safari ...

All operational features are available, including:

- Alarm banner
- Inset mimic windows
- 'Find any object' feature

MQTT Protocol

MQTT is an emerging IoT data transport method, supported by new devices and systems. MQTT moves data with non-standard content.

- Uses a simple 'JSON' format anyone can use
- Point names are used, unlike other protocols which need numeric addresses

MQTT architecture includes a 'broker' which buffers and passes data to/from devices and master

- The protocol can be secured with certificates for client and server links

Rebranding Change

Simple upgrade installation

- Program installation and directories stay the same
- System registry keys stay the same
- Executable filenames stay the same
