# Industrial Defender Manage solution

Today's automation environments typically contain a variety of systems, applications and devices from numerous vendors. To ensure the reliability and availability of their key industrial processes, ICS professionals need to properly manage and maintain their control system assets.

Through a partnership with Industrial Defender, Schneider Electric is able to offer the company's Automation Systems Manager (ASM). Its Manage solution builds on the capabilities of the Monitor offering, providing a unified view across functional areas, while giving operator's unparalleled, actionable intelligence from their heterogeneous asset base.

## Unified view

Balancing security, compliance and change management activities becomes increasingly difficult, time consuming, and expensive as automation systems grow more complex and interconnected.

To meet this management challenge while minimizing administrative burdens, the Manage solution automatically collects configuration data across a heterogeneous asset base, including changes to configurations, software and patches, and provides automated policy management and exception identification. This eliminates tedious manual data collection from endpoints.

## Single pane of glass

The Manage solution provides a 'single pane of glass' view into activities across assets, regardless of location. This centralized approach allows operators to focus on the availability of the service, and accurately forecast predictive maintenance requirements.

## Addressing compliance challenges

Whether meeting the requirements of corporate auditors or government regulations, such as NERC CIP, compliance is laborious and expensive. The Manage solution provides standard reports for meeting various regulatory
