## Industrial Defender Monitor solution

To be able to identify and quickly respond to threats and risks in automation systems, operators need to gain a clear view of the activities occurring within their environments. But that perspective can be hard to obtain in constantly-changing process control environments that are populated with disparate systems, applications and devices.

Through a partnership with Industrial Defender, Schneider Electric is able to offer the company's Automation Systems Manager (ASM). Its Monitor solution provides an unprecedented level of situational awareness into automation systems through event data collection from heterogeneous industrial endpoints. The Monitor solution's capabilities include centralized event logging, correlation and archiving. It also provides consolidation of log data for forensic analysis. And it does all of this through a dashboard that the user can customize.

### A single pane of glass

While automation environments are a mix of heterogeneous assets, the Monitor solution provides a single, unified view into activities across the asset base. This centralized approach to monitoring reduces labor requirements, allowing operators to focus on availability of the service.

The customizable dashboards allow users to populate the information that is important to them, whether by event type, location or operating system.

### Supporting best practices

Whether meeting NERC CIP requirements for monitoring, following best practices outlined by SANS or CPNI, or simply adhering to corporate requirements, event logging is a critical component of security, compliance and change management.

**A single, unified view into activities across the asset base.**

### Turnkey solutions

Schneider Electric and Industrial Defender offer two turnkey solutions for automation systems management, which include software, hardware, and services purpose-built for operational environments. With a single, unified view into common activities and processes across security, compliance and change management, owners of critical infrastructure are able to drive operational excellence. Available today, the capabilities of the Monitor and Manage solution bundles are listed at right.

### ASM Capabilities

- Event logging, correlation, and archiving
- Asset management
- Single, unified view across disparate endpoint base
- Customizable user interface dashboards
- Scalable architecture
- Configuration change management
- File integrity
- Network traffic monitoring
- Report subscriptions
- Critical process and service monitoring
- User account change identification
- Device configuration file archiving
- Understand network and system health and performance
- Maintain central configuration policy
- Collect and report on settings, accounts, and configurations
- Analyze changes across asset base and environment
- Manage hardened electronic security perimeter

### A strong partner

Schneider Electric's partner, Industrial Defender, is the global leader in security, compliance and change management solutions for industrial control systems. The company has more than a decade of experience dedicated to ICS cybersecurity, and has completed more than 10,000 global technology deployments to secure critical infrastructure systems in 25 countries. Its clients include many Fortune 100 companies.
