--------------	-----------

Additional safety is assured by sockets with electrical switch in which a mechanical lock avoid plug insertion and extraction on charge.

Sockets with interlock switch

PratiKa offer includes the FAST patented solution: this innovative cabling system enables connection without stripping the conductor and with absolutely no screws required.

Plugs and sockets

> Complete solutions:

- Quick to connect
- Safe to use
- Functional and ergonomic
- Easy and intuitive

Kaedra

Kaedra enclosures for PratiKa industrial sockets are part of a complete system of watertight enclosures from 16 to 125 A, providing solutions for protection, control and electrical distribution for tertiary and industrial applications.

PratiKa plugs and sockets

Low voltage and extra-low voltage

PR1102195

A complete range of high performance industrial plugs and sockets

The PratiKa range of industrial plugs and sockets is basically designed to suit all needs and all kinds of environments: tertiary sector, industry, building sites, workshops, agricultural sector, as well as indoor and outdoor of any kind of building.

This wide range of plugs and sockets is the result of Schneider's experience and know-how, it is a complete range, available for the 16 A, 32 A, 63 A and 125 A with degree of protection IP44 and IP67 in the wander, panel and wall versions.

These solutions are:

- fast to connect
- safe in the use
- functional and ergonomic
- easy and intuitive.

PR1102291

A complete range of products to supply circuits with risks of direct and indirect contacts with live parts

The range includes 16 and 32 A versions available in different number of pole (2P and 3P).

PratiKa with FAST connection

The **FAST** connecting system is the most innovating solution of this series which guarantees the connection without stripping the conductor, in total absence of screw.

This logo is the guarantee of the new patented connecting system of the **FAST** series.

This solution is dedicated to flexible cables both for the 16 A and 32 A.

PratiKa with SCREW connection

The **SCREW** version simplifies the most common cabling solution, having introduced the orientation of the screws which are completely open to speed the cabling.

PratiKa plugs and sockets

Low voltage and extra-low voltage

Wall plugs and sockets

Wall installations both for plugs and sockets can now be realised with PratiKa Wall IP44 available with the FAST and the SCREW solution, 16 A and 32 A.

Robustness due to rigid cover, stainless steel screws and high level of thermoplastic material permit the use in tertiary, industry and any sector.

Complete solutions for 63 A and 125 A

The nickel-plated contacts, the stainless steel screws, and the high performing plastic materials, ensure the maximum protection even in very humid and corrosive environments.

A high performing thermoplastic material ensures the use in any aggressive environment in presence of oils and chemical agents.

Phase inverters and solutions for container

Phase inverters are designed to solve quickly and safely the problems concerning electrical connections of all rotary equipment.

These plugs and sockets have been built to ensure maximum protection and guaranteed functioning also in highly aggressive and corrosive environments.

Wander plugs angled 90°

This version allows to reduce the bulk of connection between itself and a panel sockets and limits the mechanical stresses upon the cables, due to the absence of curves.

Domestic panel sockets

A range of domestic sockets IP54 is now available presenting "shutters" (child protection) in all versions, these devices permit to avoid harmful contact with the sleeves in presence of tension.

PratiKa plugs and sockets

Low voltage and extra-low voltage

Extra-low voltage sockets

The PratiKa extra-low voltage sockets and plugs ensure the non-interchangeability by means of two reference elements:

- a guide spline
- a secondary keyway.

In accordance with the IEC 309-1 and IEC 309-2 standard.

Sockets with safety transformers

Unika series are used to power circuits with a voltage rating of 50 V maximum, in order to protect people from direct and indirect contacts, in conformity with IEC364 standards.

The units integrates the socket, the power transformer and the transformer protection from any overloading.

PratiKa plugs and sockets

Sockets with interlock switch

PR102248

A complete range in order to guarantee safety, reliability and functionality

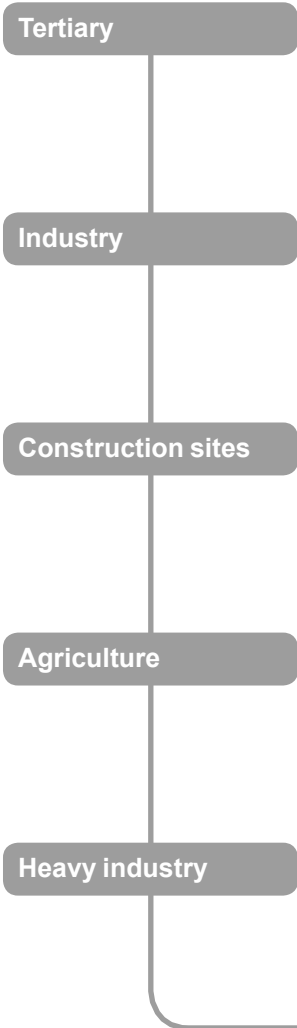

- Unika: highly functional features and very versatile installation system.
- Isoblock: for installation in high-risk areas.

In conformity with IEC 60309 standards, all the industrial sockets have a lock or holding mechanism, which keeps the plug firmly locked in the socket, preventing it from being pulled out involuntarily.

Sockets with an interlock switch have been designed to meet the safety requirements and, in particular, to prevent plug insertion or removal while the socket is under load.

Their interlocking device allows closure of the main switch and, subsequently, the power supply only when the plug is fully inserted in the socket, and when complete mechanical and electrical connection has occurred between the sleeves and pins. Plug removal is possible only when the switch is in the "off" position.

The use of these solutions is compulsory in accordance with the regulations in force, e.g. in places where there is a risk of explosion or fire. However, in order to prevent dangerous contacts capable of causing overheating and consequently insulation deterioration or the outbreak of a fire, it is always advisable to adopt this safety measures. In this way the user has the guarantee that current can only be accessed under optimum safety conditions with the plug correctly inserted.

Domain of applications

PratiKa plugs and sockets

Sockets with interlock switch

PR102282

Global solution for industrial installations

Compact, unified sizes, versions with IP44 and IP65 protection, panel and wall-mounted, with or without integrated protection, all sockets provide quick solutions to the most demanding applications.

Unika series provides

Safety

Equipped with a mechanical switch, which ensures the control and local isolating of parts of the plant or utilities to permit intervention on electrical circuits or machines in total safety.

The sockets are in conformity with IEC 60309-2 and IEC 60309-4 standards.

Protection

Have fuse-blocks with isolators placed under the front protection and accessible only when the switch is open and plug removed and, thus, in the total absence of voltage. Thanks to the fuse clips, the contact pressure on the fuses remains constant independent of installation operations, preventing excessive overheating, harmful to their functioning and duration.

Resistance

Provides guaranteed IP44 and IP65 protection against the penetration of solids and liquids, in conformity with the IEC 60529 and EN 60529 standards, while resistance to mechanical shocks is covered by IK09 protection, in conformity with IEC 62262 standards.

The structure and supporting frame of the equipment completely separated from the housing and the double walls, contribute to greatly increasing the mechanical resistance.

PR102283

A complete range for heavy-duty applications

IP65 protection, IK10 shock resistance, high resistance to aggressive chemical and atmospheric agents, specifically designed for heavy-duty applications.

Isoblock series provides

High resistance

Made of special techno-polymers, provide ultra-high resistance to aggressive chemical and atmospheric agents and guarantee maximum protection even in difficult, hazardous environments.

Protection

Against the penetration of solids and liquids, in conformity with the IEC 60529 standards, while resistance to mechanical shocks is covered by IK10 protection, in conformity with IEC 62262 standards.

PratiKa plugs and sockets

Sockets with interlock switch

Serie Unika

Unique because of the following:

- one standard size 103 x 225 mm for 16 and 32 A sockets
- for IP44 and IP65 versions
- versions protected by fuses, without protection, with insulation transformers and with DIN rail for modular devices
- fitted wall-mounted, used individually, in combination or in the Kaedra system.

Compact size

Unika sockets 16 - 32 A with interlock switch come in one standard size of 103 x 225 mm, which makes them the most compact on the market, guaranteeing at the same time ultra-high performance in terms of safety and functionality.

Easy to install

Unika interlocked sockets series are very easy in installation thanks to:

- the same dimension of 16 and 32 A that can be easily interchanged on the 103 x 225 holes
- possibility to separate the body from the back box to facilitate the wall fixing and the wiring
- possibility to hang the body to comfortably cable the switch or MCBs (for 63A version)
- possibility of cable entrance from the top, from the bottom or from the side of the box.

Design

The range includes functional and optimized shapes for an standingalone installation and for perfect integration with the unique Kaedra's enclosures.

The lines, the style and the shapes where conceived also on the basis of an easy manipulation and cabling.

Kaedra System and modular bases

Unika series sockets 16 and 32 A can be installed either on single enclosures or modular bases, and can be combined to form complete, totally protected banks. Also, they can be fitted on a Kaedra system socket panels designed specifically for Unika, enabling the construction of interlocked socket panels with the possibility of differential protection integrated.

Unika 63 can be easily associated to other interlocked sockets of Unika series both vertically or horizontally, possibility available also with the Kaedra system of watertight enclosures.

PratiKa plugs and sockets

Sockets with interlock switch

Serie Isoblock

Differentiated functions

- Version with carrier for CH 10.3 x 38 cylindrical fuses in the 16 e 32 A applications and with NEOZED in the 63 A applications.
- Version with DIN rail for installing any kind of modular equipment.

Modular panels

The cover of each individual interlocked socket can be easily removed enabling access for wiring and interconnections.

For the installation of associated interlocked sockets, modular panels are available ready-equipped with a junction box.

Sockets with interlock switch

The Isoblock series of 63-125 A with thermal-magnetic (with or without earth-fault protection) is now equipped with the Compact NSx circuit breaker, which give to the end-user lasting safety together with unsurpassed energy availability and very high electrical and technical features.

Socket combinations

Isoblock interlocked socket combinations consist of complete distribution units characterized by the high performance of the different sockets and, therefore, are intended for installation in hazardous environments.

They are easily combined with the connections devices supplied with each panel.

PratiKa plugs and sockets Kaedra system

050446N

The most complete range of solutions for protection, control and distribution panels for tertiary and industrial applications.

The new range of Kaedra system watertight enclosures provides solutions to all equipment installation problems, such as sockets, modular protection devices, buttons and indicator devices, etc., in environments where maximum protection is needed both for people and the electrical equipment.

The expected solution for a complete, coherent system, designed for the installation of all the Schneider Electric equipment, combining safety, functionality, ergonomics and design.

- Enclosures for sockets
- Enclosures for modular devices
- Enclosures for modular devices with interface
- Interface enclosures
- Universal enclosures

Safety

Kaedra enclosures ensure maximum protection thanks to the following:

- IP65 protection
- High resistance to shocks (IK09), chemical and atmospheric agents and UV rays
- Materials and structure designed to guarantee double insulation and access only to authorized personnel.

In conformity with the IEC 670 standards for empty boxes, and IEC 439-3 standards for complete boards.

Ergonomics

The Kaedra enclosures provide ample wiring space enabling simplified cable entry and internal distribution.

The doors and transparent flap-covers enable constant and immediate control of the operating conditions while the interface areas permit rapid access to the sockets or control devices.

The standardized concept of the opening enables quick installation of all the equipment either directly or through functional plaques.

Design

The modern and rounded shapes of the Kaedra enclosures are the result of careful studies on product design and ergonomics, and are recommended for public areas without spoiling the architectural surroundings with purely technological features.

The use of innovative colours enables them to fit in better with their surroundings while guaranteeing the principal needs of equipment visibility and control.

050446N

Enclosures for sockets

PR102275

These are available in versions for 1 to 8 sockets and include new modular opening, which enable installation of all the PratiKa series socket or integration of control and indicator devices.

Those versions are also available for installing new Unika interlocked sockets and blank versions for universal sockets.

Enclosures for modular devices

PR102256

These are available in versions for 2 to 72 modules and enable installation of all modular equipment up to 125 A, as well as combinations with equipment other than the modular type, thanks to the chassis and separate modular panels.

PratiKa plugs and sockets

Kaedra system

Enclosures for modular devices with interface

These are available in versions for 12, 24 and 36 modules and, thanks to the specific plaques, enable installation of other control, protection, and indicator device equipment on the panel front as well as domestic or industrial PratiKa sockets. These devices are accessible at any time maintaining the other modular equipment totally protected, that means without opening the door.

Interface enclosures

These are combinable with 2 or 3-unit modular enclosures and enable front installation of control, indicator devices and sockets. The internal volume provides convenient space for cable distribution within the enclosures.

Universal enclosures

These are available in 5 different sizes and enable the construction of control boards with non-modular equipment. These enclosures can be associated with all the Kaedra series enclosures enabling the construction of complete banks.

Association

The modular size of the Kaedra system enclosures enables them to be quickly associated both horizontally and vertically, allowing the board configuration to be adjusted according to the structural conditions of the installation environment. Furthermore, extensions can be made at any time by adjusting the panel according to the various needs.

Chassis

The Kaedra system enclosures, designed to accommodate modular devices, are equipped with an easily removable chassis to permit installation of equipment and wiring outside the board. This can be easily turned up side down to provide wide space for incoming and outgoing wiring. It is also possible to changed the on-centre between the rails (150 mm in basic delivery version) and enabling an optimum use of the internal wiring space.

Operating details

The Kaedra enclosures have been constructed in close collaboration with the installers, enabling the integration of numerous functions designed to simplify their work. Here are some examples:

- the hinges are designed to enable enclosures to be opened without removing the cover
- the dovetail joint on the chassis and on the base permit installation of wiring collars or terminal blocks
- circuit identification labels, totally protected to ensure legibility even after numerous operations.

PratiKa plugs

Low voltage

Plugs with phase inverter

The PratiKa plugs with phase inverters provide a safe, rapid solution to electrical connection problems in all rotary machines.

In fact, they permit a rapid inversion of the positions of the two pins and the phase order and, subsequently, the machine rotation direction, without having to open the plug and act on the connections.

This is achieved by simply pressing with a screwdriver on the specific area with a 180° rotation of the contact-gate block clockwise or counter-clockwise, until total inversion of the phases is obtained.

Solution for rapid inversion of electric motor rotation

The range includes different models:

- wander plugs,
- wander plugs angled 90°,
- wall-mounting plugs,
- panel-mounting plugs.

Technical data

			FAST connection, without screws	SCREW connection
				
Main characteristics			Designed to supply fixed or movable equipment by a flexible cable.	
Degree of protection	According to IEC 60529	16 and 32 A	IP44	IP44
		63 and 125 A	IP67	IP67
			-	IP67
	According to IEC 62262	Against external mechanical impacts	IK08	IK08
Materials			Housing made of self-extinguishing polymer	Housing made of self-extinguishing polymer
			Sleeves made of brass	Sleeves made of brass
			Springs and pins made of stainless steel	Springs and pins made of stainless steel
Pilot contact			-	Included in the 63 A and 125 A
Resistance to fire and abnormal heat	According to IEC 60695-2-11	Glow wire test	850°C	850°C
Connection terminals			Without screws and without stripping the conductor	Captive screws, completely loosened

Technical data

			FAST connection, without screws	SCREW connection
				
Main characteristics			They can be wall-mounted to supply appliances with wander plugs. They are very compact in dimensions.	
Degree of protection	According to IEC 60529	16 and 32 A	IP44	IP44
	According to IEC 62262	Against external mechanical impacts	IK08	IK08
Materials			Housing made of self-extinguishing polymer	Housing made of self-extinguishing polymer
			Sleeves made of brass	Sleeves made of brass
			Screws and springs made of stainless steel	Screws and springs made of stainless steel
Resistance to fire and abnormal heat	According to IEC 60695-2-11	Glow wire test	750°C	750°C
Connection terminals			Without screws and without stripping the conductor	Captive screws, completely loosened

PratiKa sockets

Low voltage

Back box wall-mounted for PratiKa panel and sockets

Technical data

			Back box wall-mounted
			
Main characteristics			They can be wall-mounted to supply appliances with wander plugs. The back box permit the use of panel sockets PratiKa, both screw and fast version, to create a wall installation with horizontal or angled outlet.
Degree of protection	According to IEC 60529	16 and 32 A	IP44
	According to IEC 62262	Against external mechanical impacts	IP67 (box + panel socket)
Materials			Housing made of self-extinguishing polymer Screws, made of stainless steel
Resistance to fire and abnormal heat	According to IEC 60695-2-11	Glow wire test	850°C

Connection

			Back box wall-mounted
Rating	Cable entry		
(In)	IP44/IP67		Cable diameter
16 A and 32 A	M25 cable gland		Max 21 mm
			Possibility to make in/out in the bottom part of the box (position for drilling M20, M25 or M32). Threaded caps M25 supplied with gasket IP67

Code of Back box wall mounted for fitting PratiKa panel sockets IP44 / IP67

Description poles	Code
Small sized BOX	
Permits the mounting of socket (16 A 3 or 4 poles) with flange 65 x 85	PKZ085
Big sized BOX	
Permits the mounting of socket (16 A 5 poles and 32 A 3 or 4 or 5 poles) with flange 90 x 100	PKZ100
Description poles	Code
Cable gland	
M25	PKZ025
M32	PKZ032

Example

PKZ100 + PKY16G734

Technical data

			FAST connection, without screws	
			Angled sockets	Straight sockets
				
Main characteristics			They can be mounted on a plate, panel or machine to supply appliance with wander plugs.	
Degree of protection	According to IEC 60529	16 and 32 A	IP44	IP44

Technical data

			Multiple adapters
			
Main characteristics			They can be used for temporary situations only and in certain industrial environments where there is no danger of explosions or fire.
Conceived in conformity with standards			IEC 60309-1, IEC 60309-2 and IEC 60309-4
Degree of protection	According to IEC 60529	16 and 32 A	IP44
	According to IEC 62262	Against external mechanical impacts	IP67
Materials			IK08
			Housing made of self-extinguishing polymer
			Pins made of nickel-plated brass
			Sleeves made of brass
			Stainless steel screw
LEDs when lighted show the presence of Voltage in each plug's phases, it is not a protection			If it should be off, control the switch-board before usage or maintenance
Resistance to fire and abnormal heat	According to IEC 60695-2-11	Glow wire test	850°C

PratiKa sockets

With interlock switch

Unika series / Panel-mounted and wall-mounted version

Technical data

			Unika with safety transformer SELV 
			Units fitted with safety transformers, in conformity with IEC742 standards.
Main characteristics			<p>Their modular size enables them to be used with all the components of the PratiKa Unika series.</p> <p>They are used to power circuits with a voltage rating of 50 V maximum, to protect users against direct and indirect contacts, in conformity with IEC 60364 standards.</p>
Colour			RAL 7035
Degree of protection	According to IEC 60529		IP44 and IP65
	According to IEC 62262	Against external mechanical impacts	IK09
Materials			Housing made of self-extinguishing polymer Screws and springs made of stainless steel
Resistance to fire and abnormal heat	According to IEC 60695-2-11	Glow wire test	750°C
The unit is rated	According to IEC 61558-2-6		Class II
Rated power of safety transformer			160 VA under continuous use
Operating voltage			230: 24 V
Power supply switch on the primary controlled			By a special mechanism upon the insertion of the plug
Available as follows			Fitted with one very-low-voltage IEC 60309 socket, 24 V 2P
			Complete with fair-lead for 25 mm Max. Diameter cables and conduits, and/or PG21 cable gland Supplied with screw head cover
Connection terminals			Captive screws
Installation			Wall-mounted possible on wall box or enclosures

Connection

PratiKa sockets

With interlock switch

Unika series / Installation flexibility

Installation flexibility

The Unika sockets with interlock switch are suitable for wall and embedded mounting or panel mounting. The offer complains a complete range of enclosures for different installation ways: individual emplacement or combination in banks.

Its compact size permits to have panel boards with small overall dimensions.

The Unika sockets are equipped with the new five thread which enables a fast fixing on all enclosures.

Technical data

		Wall-mounting box	Embedded box
		These can be fitted either wall-mounted or wall-embedded or in the Unika series interlocked socket panels.	
Main characteristics		They enable wall-mounted installation of sockets with interlock or sockets with safety transformers. On the upper part there is a section with a small cover intended for increased volumes of wiring.	They enable panel-mounted installation of sockets with interlock or sockets with safety transformers.
Colour		RAL 7035	RAL 7035 for frame/RAL 7016 for box

Technical data

		Modular bases
		For wall-mounted fitting in combinations of one or more Unika series interlocked sockets and other PratiKa series sockets.
Main characteristics		They enable wall-mounted fitting of sockets with interlock or sockets with safety transformers. On the upper part there is a box incorporated designed for easy power feeding and wiring distribution.
Colour		RAL 7035
Degree of protection	According to IEC 60529	IP65 (After installation)
	According to IEC 62262	Against external mechanical impacts
Materials		Housing made of self-extinguishing polymer Stainless steel screws
Complete insulation characteristics	According with EN 60439-1	■
Resistance to fire and abnormal heat	According to IEC 60695-2-11	Glow wire test 650°C
Modular bases		Cable entry from the top Fair-lead for 25 mm max diameter cables and conduits Version with knockout holes M32 mm diam. for association Supplied with screw head covers

Isoblock series / Wall-mounted version

Technical data

		Protected by fuse carriers	
		Thanks to their high performances they are intended for installation in environments where there are aggressive chemical agents, oils and grease, and frequent jets of water or accidental shocks.	
Main characteristics		They ensure the control and local isolating of parts of the plant or utilities so as to enable intervention on electrical circuits or machines in total safety.	
Colour		RAL 7035	
Degree of protection	According to IEC 60529	IP65	
	According to IEC 62262	Against external mechanical impacts	
Materials		Housing made of self-extinguishing polymer Screws, pins and springs made of stainless steel	
Construction	According to IEC 60309-2-4	IP65	
Resistance to fire and abnormal heat	According to IEC 60695-2-11	Glow wire test 850°C	
Operating voltage (400 V)	Rated current	16 A	20 A (AC22) / 9.5 kW (AC23A) IEC 60947-3
		32 A	32 A (AC22) / 16 kW (AC23A) IEC 60947-3
		63 A	63 A (AC22) / 30 kW (AC23A) IEC 60947-3
The switch can be externally padlocked into position		"0" and "1"	
Disconnect fuse carriers	Complying with IEC 60269	16 - 32 A	For CH 10.3 x 38
		63 A	For NEOZED D02 type fuses
Access lid to fuse carriers can be opened		Only with the switch in position "0"	
Fuses not supplied		■	
Wall-mounted version		Cable entry from the top Complete with fair-lead for 25 mm Max. Diameter cables and conduits, and/or: ■ PG21 cable gland for 16 A and 32 A ■ PG29 for 63 A	
Connection terminals		Captive screw

The PratiKa plugs and sockets for containers are designed to power refrigerated containers in ports, railway stations, airports, as well as on board container-ships.

The IP67 protection, use of nickel-plated contacts, stainless steel screws, pins and springs and high performance plastic materials, combine in ensuring maximum protection and guaranteed functioning also in highly aggressive and corrosive environments.

The solution for safe connections worldwide

In accordance with standards, these plugs and sockets are available in the following versions:

- 32 A - 3P+E,
- voltage rating 400 - 440 V,
- clock-position 3 hours,
- degree of protection IP67.

Functions

They are designed for supplying low-voltage power to loades or equipment fitted with domestic or similar plugs.

- PratiKa wander plugs.
- PratiKa wander plugs angled 90°.
- PratiKa wall mounted plugs.
- PratiKa panel-mounted plugs.
- PratiKa wander sockets.
- PratiKa small wall-mounted sockets.
- PratiKa wall-mounted sockets.
- PratiKa panel-mounted angled sockets.
- PratiKa panel-mounted straight sockets.
- Interlocked sockets Unika.
- Interlocked sockets Unika with fuse protection.
- Interlocked sockets Isoblock with DIN rail.

Direct mounting

Indirect mounting

These products can be mounted on Kaedra trough the use of plaques

All Kaedra enclosures for sockets are delivered with an intermediate plaque (13136) already mounted on each opening, remove it before mounting a 16 A 5P or 32 A 3-4-5P socket.

Kaedra for modular device with interface have the plaque 13138 already mounted on each opening.

The standard openings

- All enclosures for sockets and enclosures for interface have different openings for functional plaques. There are three standard dimensions:
- 65 x 85 mm, for direct fixing of PratiKa angled sockets of 16 A 2P+E and 3P+E or of domestic sockets
 - 90 x 100 mm, for direct fixing of PratiKa in the enclosures for sockets, these opening are normally delivered with intermediate plaques code 13136
 - 103 x 225 mm, for direct fixing of Unika sockets with interlock switch and relative functional plaques.

Indirect mounting

Wander plug and socket connection: device which permits the connection of two flexible cables: it comprises a wander socket and a plug.

Wander plug: part which is securely connected, or designed to be connected, to a power supply flexible cable.

Appliance plug inlet: device which permits the connection of a flexible cable to an appliance: it comprises a wander socket a plug inlet.

Plug inlet: incorporated part fixed, or designed to be fixed, to an appliance.

The normal pollution level is:
for domestic or similar devices: for industrial type applications:

Level 2

Level 3

The pollution level is a conventional number based on the amount of conductive or hygroscopic dust, ionised gas or salts, on the relative humidity and on the frequency which causes absorption or condensation of humidity, a phenomenon which involves a reduction of dielectric strength and/or surface resistivity. The pollution level referred to is the one occurring in the immediate vicinity to the air and surface between elements with different potential.

The products included in this catalogue can be used also in environments with particularly severe conditions. Contact us for any further information.

The catalogue includes a vast range of plugs and sockets designed mainly for industrial use, both indoor and outdoor, where the ambient temperature does not normally exceed 40°C. Thanks to the manufacturing characteristics and to the use of materials with superior performance and resistance to chemical and environmental agents, these devices are widely used also in building sites and in other sectors, like workshops, agriculture and offices. In the case of use in special environments, for example on ships, or in areas with explosion hazards, special characteristics can be required. In the case of use under severe conditions, it may be advisable to replace sockets with dirty and oxidated contacts, either periodically, or when the insertion or extraction force is considered too high.

Reference standards

The standards, from a point of view of dimensions and performance, for this family of products are defined at an international level and included in the European standards:

- IEC 60309-1
- IEC 60309-1-4
- EN 60309-1.

- Plugs and sockets for industrial use
- Part 1: General provisions.

- IEC 60309-2
- EN 60309-2.

- Plugs and sockets for industrial use
- Part 2: provisions of dimensional interchangeability for plugs and sockets with cylindrical pins and sleeves.

Definitions

The various applications of plugs and sockets include the following devices:

- **Plug and socket outlet:** device which permits the connection of a flexible cable to a power supply installation: it comprises a socket and a plug
- **Socket:** part which is to be installed in the power supply installation or incorporated in switchgear and controlgear
- **Plug:** part which is securely connected, or designed to be connected, to a flexible cable connected to an appliance or to a connector.

Operating conditions

The Standards IEC 60947-1, EN 60947-1, "Low-voltage switchgear and controlgear: general rules", define the normal operating conditions for electrical and electronic devices. Such standards are generally applicable to devices operating within the voltage limit of up to 1,000 V for alternated current or 1,500 V for direct current, unless otherwise required by the specific product standard.

Ambient temperature

- Maximum temperature: +40°C with average temperature during 24 hours not exceeding +35°C.
- Lower temperature limit: -25°C.

Altitude

Up to 2,000 m a.s.l.

Atmospheric conditions

Humidity

- Relative humidity not exceeding 50% with temperature of +40°C.
- A higher relative humidity is allowed with a lower temperature, for example, 90% with +20°C (see drawing).

Level of environmental pollution

The following levels of pollution are considered for electrical and electronic devices:

Level 1

There is no pollution or there may be dry non-conductive pollution;

Level 2

Normally the devices can be used in the presence of non-conductive polluting substances, occasionally there may be temporary conductivity caused by condensation.

Level 3

Presence of conductive pollution or dry non-conductive pollution, which become conductive with condensation.

Level 4

The pollution causes persistent and high conductivity, such pollution is caused for example by conductive dust, rain or snow.

Low voltage socket

Extra-low voltage socket

Principal provisions

The standards cover the use of plugs and sockets with either alternate current, frequency of up to 500 Hz, or direct current, divided into two main classes:

- extra-low voltage plugs and sockets, with operating voltage of up to 50 V
- low voltage plugs and sockets, with operating voltage of 50 V to 690 V.

The standards cover rated currents of 16 and 32 A with 2P and 3P configurations for extra-low voltage, and rated currents of 16, 32, 63 and 125 A with 2P+ \perp , 3P+ \perp and 3P+N+ \perp for low voltage.

There is a specific model for each use, with different rated characteristics of voltage, frequency, polarity and application, incorporating safety hindrances which make it impossible to insert any plug in a socket which is not the exact corresponding type.

Non-interchangeability is ensured by compliance with the different standardised dimension tables which indicate different ground contact positions in relation to a standard fixed reference of the connection.

Low voltage versions > 50 V

In the low voltage versions non-interchangeability is ensured by means of two elements:

- a guide spline on the socket which matches with a corresponding nib on the plug
- a ground contact larger than the other contacts, in a different clock position according to the rated operating characteristics.

The clock position (h) of the ground contact is checked by observing, with the socket viewed from the front, the position of the ground contact in relation to the main keyway (guide spline), always positioned at 6 o'clock.

Extra-low voltage versions < 50 V

Also for these versions, with no ground contact, non-interchangeability is ensured by means of two reference elements:

- a guide spline on the plug which matches with a corresponding nib on the socket, always at a fixed 6 o'clock position
- a secondary keyway, also this a spline on the plug to which corresponds a nib on the socket, at different clock positions according to the operating characteristics.

The clock position (h) of the secondary keyway is checked by observing, with the socket viewed from the front, the position of the nib in relation to the main keyway, always positioned at 6 o'clock.

Coded colours

For easy identification of the operating voltage, the standard indicates conventional coded colours which may involve the entire device or only one part (e.g., lift cover, ring, etc.).

Rated operating voltage	Colour ⁽¹⁾
De 10 à 25 V	Violet
De 40 à 50 V	White
De 100 à 130 V	Yellow
De 200 à 250 V	Blue
De 380 à 480 V	Red
De 500 à 690 V	Black

(1): for a frequency above 60 Hz and up to 500 Hz included, the green colour can be used, if necessary, in conjunction with the colour of the rated operating voltage.

Clock reference

The range comprises all versions covered by the standards, including the more specific ones. Although the catalogue covers only some standard models, it is possible to have all the different clock positions specified by the standard; the following are some of the positions for this range:

Application		Clock position ground contact
Common use		h 6
Refrigerated containers		h 3
Marines, wharf and ship installations		h 11
Power supply through isol.transformer (TST)		h 12
Direct current	50 to 250 V	h 3
	Above 250 V	h 8
High-frequency	100 to 300 Hz	h 10
	Above 300 to 500 Hz	h 2
Special voltage	100 to 130 V	h 4
	480 to 500 V	h 7
	600 to 690 V	h 5

Possible variations are indicated in the table at page 58.

The standard classifies and codifies a great number of external influences to which an electrical system may be subjected: presence of water, solid objects, risk of impacts, vibrations, presence of corrosive substances, etc. These situations can affect electrical components with a variable intensity depending on the characteristics of the system: presence of water, for example, can be either some drops of water falling or total immersion.

IP code

The standard IEC 60529 (EN 60529) indicates, by means of the IP code, the degree of protection for electrical devices against access to energised parts and against the entry of water and of foreign solid objects.

This standard does not consider the protection against the risk of explosion or environmental situations like humidity, corrosive vapours, moulds or insects.

The IP code is composed of 2 characteristic digits and can be expanded by an additional letter if the protection of people against access to energised parts is greater than the one indicated by the first digit.

Another supplementary letter indicates additional information on the protection of material. The table below indicates the classification criteria of the IP code.

Degree of protection IP in accordance to IEC 60529

1st characteristic digit: protection against the entry of foreign objects and against access to dangerous parts.

Meaning	0	1	2	3	4	5	6
Protection of the enclosure against the entry of		Solid objects with dimensions greater than 50 mm	Solid objects with dimensions greater than 12.5 mm	Solid objects with dimensions greater than 2.5 mm	Solid objects with dimensions greater than 1 mm	Harmful amount of dust Talcum powder	Dust (totally protected) Talcum powder

2nd characteristic digit: protection against the infiltration of water

Meaning	0	1	2	3	4	5	6	7	8	9
Protection of the enclosure against the harmful effect of		Water drops falling vertically	Water drops falling vertically with an angle of 15° from vertical	Rain	Splashes of water	Jets of water	Strong jets of water	Temporary immersion	Continuous immersion	Protected against close-range high pressure, high temperature spray downs

Optional letters

The additional letter is used only if the actual protection of persons is higher than that indicated by the first characteristics numeral of the IP code.

If only the protection of persons is of interest, the two characteristics numerals are replaced by the letter "X", e.g. IPXXB.

Additional letter	Protection
A	Protection of person against access with back of hand
B	Protection of person against access with finger
C	Protection of person against access with tool
D	Protection of person against access with wire

If only the protection of persons is of interest, the two characteristics numerals are replaced by the letter "X", e.g. IPXXB.

Supplementary letter*	Protection
H	High voltage devices
M	Tested against the harmful effects of water infiltration when the mobile parts of the device are moving
S	Tested against the harmful effects of water infiltration when the mobile parts of the device are not moving
W	Suitable for use in specified atmospheric conditions and provided with additional measures and procedures

(*) For the protection of material.

Used only if:

- the effective protection against access to dangerous parts is greater than the one indicated by the first characteristic digit
- only the protection against access to dangerous parts is indicated and the first characteristic digit is then replaced by an X.

Example of full application of the IP code

DB113104

Degree of protection against mechanical impacts IK

The standard IEC 62262 defines the degree of protection against mechanical impacts indicated with the letters IK, followed by a number. The following table indicates the impact values in joules corresponding to each code.

Degree of protection against mechanical impacts IK in accordance with standard IEC 62262

IK code	Impact energy
00	Not protected
01	0.15 Joule
02	0.2 Joule
03	0.35 Joule
04	0.5 Joule
05	0.7 Joule
06	1 Joule
07	2 Joule
08	5 Joule
09	10 Joule
10	20 Joule

Behaviour to abnormal heat and to fire

Self-extinguishing characteristics and behaviour to abnormal heat and to fire

The assessment index for the behaviour to fire of components made of organic material is defined by the different product standards and generally refer to three different test methods.

Aim of the tests	Tests results	Tests conditions
Glow-wire test in accordance with IEC 60695-2-11		
Simulate the thermal stress which may be produced by heat or ignition sources (incandescent elements or overloaded resistors for short periods) to be able to assess the danger of starting a fire.	Any flame must stop within 30 sec after removing the incandescent wire. <ul style="list-style-type: none"> ■ Test temperatures □ 650°C □ 750°C □ 850°C □ 960°C Falling burning drops do not set fire to the tissue paper.	Heat sources 4 mm diameter incandescent wire Duration of the test Wire applied for 30 sec. Characteristic elements Extinguishing time of the flame
Flame with needle test in accordance with IEC 60695-2-12		
Simulate the effect of small flames which may occur in a malfunction condition within the products with the aim of judge the risk of fire.	<ul style="list-style-type: none"> ■ The sample does not catch fire ■ The flame and the incandescent particles do not propagate fire ■ The duration of combustion is less than 30 sec after removing the Bunsen burner 	Heat sources Flame from a Bunsen burner Duration of the test Flame applied for 5, 10, 20, 30, 60, 120 sec according to the specific standard Characteristic elements The degree of severity: flame application time (AT)
UL method - Underwriters Laboratories in accordance with UL 94		
Supply a classification of the various behaviours which the materials may after contact with the flame from a Bunsen burner	<ul style="list-style-type: none"> ■ V0 if the specimen burns on average for less than 5 sec before self-extinguishing ■ V1 if it burns on average for less than 25 sec. ■ V2 if it burns for less than 25 sec with incandescent drips ■ HB if it burns for more than 25 sec (specimen horizontal and combustion velocity less than 38 mm/min) Assimilated to ASTM D-635	Heat sources Flame from a Bunsen burner Duration of the test Flame applied for 10 sec twice in a row Characteristic elements Duration of combustion

Behaviour to chemical agents

The indications stated below are applicable to the conditions where the ambient temperature does not exceed 40 °C and the mechanical stress is not so concentrated as to cause permanent surface deformations.

The engineering polymers used for our products ensure optimum behaviour of the finished products to chemical and atmospheric agents.

Should such products be used in environments with a particularly high concentration of acids, bases, oils, it will be advisable to contact our Technical Department for a better solution to the problem.

In any case, the series of products highlighted with blue are suitable for use in particularly aggressive environments, characterised by strong concentration of oils, bases and acids.

Product series	ACIDS		BASES		SOLVENTS			OIL			FUEL									
	H ₂ O	Saline solution	Conc.	Diluted	Conc.	Diluted	Hexane	Benzene	Acetone	Absol. ethyl alcohol	Silicone	Mineral	Veget. oil	Animal fat	Synthetic grease	Animal organic solution	Unleaded premium	Premium	Diesel	Ammonia

400		3 h		
401 to 500 included		11 h		
Direct current	20-25 and 40-50	10 h		

NOTES

- (1) The ground contact position is in relation to the keyway. The table indicates only the values for series I (16 - 32 - 63 - 125 A); however the devices can also be used in accordance with the values of series II (20 - 30 - 60 - 100 A).
- (2) Mainly for installation on ships. The positions indicated by a dash (-) are not standardised.
- (3) Colour according to voltage.
- (4) For refrigerated containers only (standardised ISO).
- (5) The position of the secondary keyway is in relation to the main keyway.
