

Product Substitutions for 2021 End of Commercialization

Foxboro SCADA

February, 2021

Schneider Electric announces the End of Commercialization (EoC) of Foxboro™ SCADA 3.4 and its move to the MATURE phase of the product's lifecycle.

'EoC' only signifies that a solution/product will no longer be available for offer or purchase. Service and support will continue to be maintained to the End of Service (EoS) date, which occurs at a time period from the original EoC date. (See below)

Why these End of Commercializations?

The solutions/products listed in this document:

- Are no longer cost, feature, or performance-competitive when compared to alternates currently available from Schneider Electric or competing offers on the market.
- Use obsolete components that limit production capacity and lifetime, while increasing cost.

End of Service

- Service will be maintained for Foxboro SCADA for a minimum of 2 years from EoC date.
- Technical support services and support will be maintained on a best-effort basis after the service periods described above have expired.

Suggested Product Substitutions

Foxboro SCADA 3.4 will be replaced with AVEVA System Platform 2020.
