New Features:

The next generation of Smart-UPS now boast an ingenious connectivity feature that makes the legendary devices even more adaptable and even easier to deploy. APC SmartConnect is an enabling feature that allows customers to view the status of their UPS through a secure web portal. Through this innovative remote management interface, customers will receive automatic notifications, firmware updates, and advanced support. APC SmartConnect's easy-to-use network connectivity provides added value – and more importantly – added peace of mind.

What sets us apart from the competition?

First of its kind: The APC SmartConnect feature makes Smart-UPS the first cloud enabled UPS for distributed IT

Advice from the experts: Connected Smart-UPS routinely provides proactive UPS lifecycle recommendations, helping maximize the lifespan of your APC UPS.

Accessibility: The APC SmartConnect web portal is accessible from any internet connected device. You'll be able to check on your IT equipment on site or on the go.

Enabled as a standard: APC SmartConnect will be automatically included on select Smart-UPS models; making it the perfect solution for price-conscious professionals in need of power security.

Seamless integration: Easily integrate with leading remote monitoring and management solutions, so you can manage customer portfolios in a single platform.

Life Is On
