# 1 EcoStruxure Fire Expert Application overview

Fire Expert is online application for efficient management of fire detection systems. The system is based on software as a service (SaaS) cloud computing model providing easy and secure access from anywhere at any time.

Fire Expert application can receive data from different Esmi Sense FDP detection systems to remotely monitor and manage these sources efficiently using one application. Users can sign in to the system and start to use selected features. The Fire Expert application login: [www.esmifire.com](http://www.esmifire.com)

## Fire Expert Web User Interface

Fire Expert provides the browser-based application for viewing the fire detection system data and the status of the fire detection systems. The application is accessible for authorized users at any connected computer, mobile phone or tablet running latest version of Microsoft Internet Explorer, Mozilla Firefox, Google Chrome without client software installation.

## Licenses

All features in Fire Expert have been licensed. Licenses are locked either for the users or fire detection systems. All licenses are annual based with expiration date.

## Users and user rights

Access to the system is protected by user name and password. The administrator can invite and edit users for the system. All users can edit their personal information.

All authorized users of the company can see their paired fire detection systems. In addition, administrator can invite new companies/organizations to the system. A new invited company/organization will automatically have a new administrator level user.
